EX-99.1

ITEM 5. OTHER EVENTS

On October 26, 2001, eBay Inc. (the "Company" or "us") issued a press release in connection with a presentation to its analysts, which is filed herewith as Exhibit 99.1 and incorporated herein by reference.

Set forth below is an updated set of Risk Factors that may affect the Company's business, results of operations and financial condition. The risks and uncertainties described below are not the only ones facing us. Additional risks and uncertainties not presently known to us or that we currently deem immaterial also may impair our business operations. If any of the following risks or such other risks actually occur, our business could be harmed.

RISK FACTORS

Our operating results may fluctuate

Our operating results have varied on a quarterly basis during our operating history. Our operating results may fluctuate significantly as a result of a variety of factors, many of which are outside our control. Factors that may affect our quarterly operating results include the following:

our ability to retain an active user base, to attract new users who list items for sale and who purchase items through our service and to maintain customer satisfaction;

our ability to keep our websites operational and to manage the number of items listed on our service;

the amount and timing of operating costs and capital expenditures relating to the maintenance and expansion of our business, operations and infrastructure;

foreign, federal, state or local government regulation, including investigations prompted by items improperly listed or sold by our users;

the introduction of new sites, services and products by us or our competitors;

volume, size, timing and completion rate of trades on our websites;

consumer willingness to consummate transactions with other users who are not known to them, and consumer confidence in the security of transactions on our websites;

our ability to upgrade and develop our systems and infrastructure to accommodate growth;

our ability to successfully integrate and manage our acquisitions, including our purchase of a majority interest in Internet Auction Co., Ltd. (IAC) and our acquisition of iBazar SA (iBazar) earlier this year;

technical difficulties or service interruptions;

our ability to attract new personnel in a timely and effective manner;

our ability to retain key employees in both our online businesses and our acquisitions;

our ability to expand our product offerings involving fixed price trading successfully;

the ability of our land-based auction businesses to acquire high quality properties for auction;

Table of Contents

the timing, cost and availability of advertising in traditional media and on other websites and online services;

the cost and demand for advertising on our own websites;

the timing of payments to us and of marketing and other expenses under existing and future contracts;

consumer trends and popularity of some categories of items;

the success of our brand building and marketing campaigns;

the continued success of our commercial partners and technology suppliers;

the level of use of the Internet and online services;

increasing consumer acceptance of the Internet and other online services for commerce and, in particular, the trading of products such as those listed on our websites; and

general economic conditions and economic conditions specific to the Internet and e-commerce industries.

Our limited operating history and the increased variety of services offered on our sites, makes it difficult for us to forecast the level or source of our revenues or earnings accurately. We believe that period-to-period comparisons of our operating results may not be meaningful, and you should not rely upon them as an indication of future performance. We do not have backlog, and a substantial portion of our net revenues each quarter come from transactions for items that are listed and sold during that quarter. Our operating results in one or more future quarters may fall below the expectations of securities analysts and investors. In that event, the trading price of our common stock would almost certainly decline.

Impact of September 11 attack

The September 11 terrorist attack adversely affected our revenues and profits, particularly in the US. Any further terrorist actions, whether in the US or elsewhere, would likely adversely affect our business. In particular, any action (for example, further bio-terrorism involving letters or packages) that makes consumers less willing to purchase or receive goods from third parties they do not know could disproportionately and adversely affect our business.

We have a limited operating history

Our company was formed as a sole proprietorship in September 1995 and was incorporated in California in May 1996 and reincorporated in Delaware in April 1998. We have only a limited operating history on which you can base an evaluation of our business and prospects. As an online commerce company still relatively early in our development, we face substantial risks, uncertainties, expenses and difficulties. To address these risks and uncertainties, we and our subsidiaries must do the following:

maintain and increase our number of registered users, items listed on our service and completed sales;

expand into new categories, geographies, and service areas;

Table of Contents

maintain and grow our websites and customer support operations at a reasonable cost;

continue to make trading through our service safer for users;

maintain and enhance our brand;

continue to develop and upgrade our technology and information processing systems;

continue to enhance and expand our service to meet the changing requirements of our users;

provide superior customer service;

remain attractive to our commercial partners;

respond to changing legal environments in a variety of countries

respond to competitive developments; and

attract, integrate, retain and motivate qualified personnel.

We may be unable to accomplish one or more of these goals, which could cause our business to suffer. In addition, accomplishing one or more of these goals might be very expensive, which could harm our financial results.

We may not maintain profitability

We believe that our continued profitability will depend in large part on our ability to do the following:

maintain sufficient transaction volume to attract buyers and sellers;

manage the costs of our business, including the costs associated with maintaining and developing our websites, customer support and international and product expansion;

increase our brand name awareness; and

provide our customers with superior community and trading experiences.

We are investing heavily in marketing and promotion, customer support, further development of our websites, technology and operating infrastructure development. The costs of these investments are expected to remain significant into the future. In addition, many of our acquisitions require continuing investments in these areas and we have significant ongoing contractual commitments in some of these areas. As a result, we may be unable to adjust our spending rapidly enough to compensate for any unexpected revenue shortfall, which may harm our profitability. The existence of several larger and more established companies that are enabling online sales as well as newer companies, some of whom do not charge for transactions on their sites and others who are facilitating trading through other pricing formats (e.g., fixed price, reverse auction, group buying, etc.) may limit our ability to raise user fees in response to declines in profitability. In addition, we are spending in advance of anticipated growth, which may also harm our profitability. In view of the rapidly evolving nature of our business and our limited operating

Table of Contents

history, we believe that period-to-period comparisons of our operating results are not necessarily meaningful. You should not rely upon our historical results as indications of our future performance.

Acquisitions could result in dilution, operating difficulties and other harmful consequences

We have acquired a number of businesses, including our recently completed acquisitions of Half.com, Internet Auction, iBazar and HomesDirect and may in the future acquire businesses, technologies, services or products that we believe are strategic. The process of integrating any acquisition may create unforeseen operating difficulties and expenditures and is itself risky. The areas where we may face difficulties include:

diversion of management time (at both companies) during the period of negotiation through closing and further diversion of such time after closing, as well as a shift of focus from operating the businesses to issues of integration and future products;

declining employee morale and retention issues resulting from changes in compensation, reporting relationships, future prospects or the direction of the business;

the need to integrate each company's accounting, management information, human resource and other administrative systems to permit effective management, and the lack of control if such integration is delayed or not implemented;

the need to implement controls, procedures and policies appropriate for a larger public company at companies that prior to acquisition had lacked such controls, procedures and policies; and

in some cases, the need to transition operations onto the existing eBay platform.

Prior to the four acquisitions we made in the second quarter of 1999, we had almost no experience in managing this integration process. Many of our acquisitions to date have involved either family-run companies or very early stage companies, which may worsen these integration issues. Foreign acquisitions involve special risks, including those related to integration of operations across different cultures, currency risks and the particular economic and regulatory risks associated with specific countries. Moreover, the anticipated benefits of any or all of our acquisitions may not be realized. Future acquisitions or mergers could result in potentially dilutive issuances of equity securities, the incurrence of debt, contingent liabilities or amortization expenses related to goodwill and other intangible assets, any of which could harm our business. Future acquisitions or mergers may require us to obtain additional equity or debt financing, which may not be available on favorable terms or at all. Even if available, this financing may be dilutive.

There are many risks associated with our international operations

In 1999, we acquired alando.de.ag, a leading online German personal trading platform, and began operations in the United Kingdom and, through a joint venture, in Australia. In the first quarter of 2000, we further expanded into Japan and formally launched our localized Canadian operations. In October 2000, we launched our French site. In January 2001, we launched our Italian site. In February 2001, we completed our acquisition of a majority interest in Internet Auction, and in May 2001, we completed our acquisition of iBazar, a French company with online trading operations in eight countries, primarily in Europe. Expansion into international markets requires management attention and resources. We have limited experience in localizing our service to conform to local cultures, standards and policies. In most countries, we will have to compete with local companies who understand the local market better than we

Table of Contents

do. We may not be successful in expanding into international markets or in generating revenues from foreign operations. Even if we are successful, the costs of operating new sites are expected to exceed our net revenues for at least 12 months in most countries. As we continue to expand internationally, we are subject to risks of doing business internationally, including the following:

regulatory requirements, including regulation of auctions, that may limit or prevent the offering of our services in local jurisdictions, may prevent enforceable agreements between sellers and buyers, may prohibit certain categories of goods or may limit the transfer of information between our foreign subsidiaries and ourselves;

legal uncertainty regarding liability for the listings of our users, including less Internet-friendly legal systems, unique local laws and lack of clear precedent or applicable law;

difficulties in staffing and managing foreign operations;

longer payment cycles, different accounting practices and problems in collecting accounts receivable;

local taxation of transactions on our websites;

higher telecommunications and Internet service provider costs;

stronger local competitors;

more stringent consumer and data protection laws;

cultural non-acceptance of online trading;

seasonal reductions in business activity; and

potentially adverse tax consequences.

Some of these factors may cause our international costs to exceed our domestic costs of doing business. To the extent we expand our international operations and have additional portions of our international revenues denominated in foreign currencies, we also could become subject to increased difficulties in collecting accounts receivable and risks relating to foreign currency exchange rate fluctuations.

Disputes between IAC and credit card companies may harm our operations in Korea

The credit card companies providing payment services to our majority-owned Korean subsidiary, IAC, have experienced higher than anticipated delinquency rates on transactions carried out on the IAC platform. Some of these delinquencies are related to fictitious transactions on IAC and other Korean internet sites to enable users to receive cash advances on their credit cards that would not otherwise be permitted by the credit card companies. As of September 30, 2001, the credit card companies had withheld approximately 5.6 billion Won (about \$4.3 million) as collateral against certain delinquent accounts, and had threatened to terminate their agreements with IAC if matters are not resolved to their satisfaction. Beginning in the Spring of 2001, IAC has been putting into place certain user verification and site monitoring processes that it believes have substantially reduced this type of credit card misuse on its system. IAC is currently in negotiations with the credit card companies to resolve this situation. If these negotiations are not successful, termination of its agreements with the credit

Table of Contents

card companies would adversely affect IAC's business and could adversely impact eBay's business. Any settlement related to past transactions could adversely affect IAC's results of operations but is not expected to be material to eBay's consolidated financial results.

Our revenue from third party advertising and end-to-end services and promotions is subject to factors beyond our control

We are receiving revenues from end-to-end service providers and direct advertising promotions. These revenues may be affected by the financial condition of the parties with whom we have these relationships and by the success of online promotions generally. Recently, the pricing of online advertisements has deteriorated. Our direct advertising revenue is dependent in significant part on the performance of AOL's sales force, over which we do not have control. These revenues have become increasingly important to us. Reduction in these revenues, whether due to the softening of the demand for online advertising in general or particular problems facing parties with whom we have commercial relationships, would adversely affect our results.

Our failure to manage growth could harm us

We currently are experiencing a period of expansion in our headcount, facilities and infrastructure, and we anticipate that further expansion will be required to address potential growth in our customer base and number of listings as well as our expansion into new geographic areas, types of goods and alternative methods of sale. This expansion has placed, and we expect it will continue to place, a significant strain on our management, operational and financial resources. The areas that are put under strain by our growth include the following:

The Websites. We must constantly add new hardware, update software and add new engineering personnel to accommodate the increased use of our and our subsidiaries' websites and the new products and features we are regularly introducing. This upgrade process is expensive, and the increased complexity of our websites increases the cost of additional enhancements. If we are unable to increase the capacity of our systems at least as fast as the growth in demand for this capacity, our websites may become unstable and may cease to operate for periods of time. We have experienced periodic unscheduled downtime. Continued unscheduled downtime would harm our business and also could anger users of our websites and reduce future revenues.

Customer Support. We are expanding our customer support operations to accommodate the increased number of users and transactions on our websites and the increased level of trust and safety activity we provide worldwide. If we are unable to provide these operations in a cost-effective manner, users of our websites may have negative experiences, and current and future revenues could suffer, or our operating margins may decrease.

Customer Accounts. Our revenues are dependent on prompt and accurate billing processes. If we are unable to grow our transaction processing abilities to accommodate the increasing number of transactions that must be billed, our ability to collect revenue will be harmed.

We must continue to hire, train and manage new employees at a rapid rate. The majority of our employees today have been with us less than eighteen months and we expect that our rate of hiring will continue at a high pace. If our new hires perform poorly, or if we are unsuccessful in hiring, training, managing and integrating these new employees, or if we are not successful in retaining our existing employees, our business may be harmed. To manage the expected growth of our operations and personnel, we will need to improve our transaction processing, operational and financial systems, procedures and controls. This is a special challenge as we acquire new operations with different systems.

Table of Contents

Our current and planned personnel, systems, procedures and controls may not be adequate to support our future operations. We may be unable to hire, train, retain and manage required personnel or to identify and take advantage of existing and potential strategic relationships and market opportunities.

Our business may be harmed by the listing or sale by our users of illegal items

The law relating to the liability of providers of online services for the activities of their users on their service is currently unsettled. We are aware that certain goods, such as firearms, other weapons, adult material, tobacco products, alcohol and other goods that may be subject to regulation by local, state or federal authorities, have been listed and traded on our service. We may be unable to prevent the sale of unlawful goods, or the sale of goods in an unlawful manner, by users of our service, and we may be subject to allegations of civil or criminal liability for unlawful activities carried out by users through our service. We have been subject to several lawsuits based upon such allegations. In order to reduce our exposure to this liability, we have prohibited the listing of certain items and increased the number of personnel reviewing questionable items. In the future, we may implement other protective measures that could require us to spend substantial resources and/or to reduce revenues by discontinuing certain service offerings. Any costs incurred as a result of liability or asserted liability relating to the sale of unlawful goods or the unlawful sale of goods, could harm our business. In addition, we have received significant and continuing media attention relating to the listing or sale of unlawful goods on our websites. This negative publicity could damage our reputation and diminish the value of our brand name. It also could make users reluctant to continue to use our services.

Our business may be harmed by the listing or sale by our users of pirated or counterfeit items

We have received in the past, and we anticipate we will receive in the future, communications alleging that certain items listed or sold through our service by our users infringe third-party copyrights, trademarks and tradenames or other intellectual property rights. Although we have sought to work actively with the content community to eliminate infringing listings on our websites, some content owners have expressed the view that our efforts are insufficient. Content owners have been active in defending their rights against online companies, including eBay. Allegations of infringement of third-party intellectual property rights have in the past and may in the future result in litigation against us. Such litigation is costly for us, could result in increased costs of doing business through adverse judgment or settlement, could require us to change our business practices in expensive ways, or could otherwise harm our business. Litigation against other online companies could result in interpretations of the law that could also require us to change our business practices or otherwise increase our costs.

Our business may be harmed by fraudulent activities on our websites

Our future success will depend largely upon sellers reliably delivering and accurately representing their listed goods and buyers paying the agreed purchase price. We have received in the past, and anticipate that we will receive in the future, communications from users who did not receive the purchase price or the goods that were to have been exchanged. In some cases individuals have been arrested and convicted for fraudulent activities using our websites. While we can suspend the accounts of users who fail to fulfill their delivery obligations to other users, we do not have the ability to require users to make payments or deliver goods or otherwise make users whole other than through our limited reimbursement program. Other than through this program, we do not compensate users who believe they have been defrauded by other users. We also periodically receive complaints from buyers as to the quality of the goods purchased. Negative publicity generated as a result of fraudulent or deceptive conduct by

Table of Contents

users of our service could damage our reputation and diminish the value of our brand name. We expect to continue to receive requests from users requesting reimbursement or threatening or commencing legal action against us if no reimbursement is made. Our liability for these sort of claims is only beginning to be clarified and may be higher in some non-U.S. jurisdictions than it is in the U.S. This sort of litigation could be costly for us, divert management attention, result in increased costs of doing business, lead to adverse judgments or could otherwise harm our business. In addition, affected users will likely complain to regulatory agencies who could take action against us.

Government inquiries may lead to charges or penalties

On January 29, 1999, we received initial requests to produce certain records and information to the federal government relating to an investigation of possible illegal transactions in connection with our websites. We were informed that the inquiry includes an examination of our practices with respect to these transactions. We have continued to provide further information in connection with this ongoing inquiry. In order to protect the investigation, the court has ordered that no further public disclosures be made with respect to the matter.

On March 24, 2000, Butterfields received a grand jury subpoena from the Antitrust Division of the Department of Justice requesting documents relating to, among other things, changes in Butterfields' seller commissions and buyer premiums and discussions, agreements or understandings with other auction houses, in each case since 1992. We believe this request may be related to a publicly reported criminal case against certain auction houses for price fixing. We have provided the information requested in the subpoena.

Should these or any other investigations lead to civil or criminal charges against us, we would likely be harmed by negative publicity, the costs of litigation, the diversion of management time and other negative effects, even if we ultimately prevail. Our business would suffer if we were not to prevail in any actions like these. Even the process of providing records and information can be expensive, time consuming and result in the diversion of management attention.

A large number of transactions occur on our websites. We believe that government regulators have received a substantial number of consumer complaints about us which, while small as a percentage of our total transactions, are large in aggregate numbers. As a result, we have from time to time been contacted by various foreign, federal, state and local regulatory agencies and been told that they have questions with respect to the adequacy of the steps we take to protect our users from fraud. We are likely to receive additional inquiries from regulatory agencies in the future, which may lead to action against us. We have responded to all inquiries from regulatory agencies by describing our current and planned antifraud efforts. If one or more of these agencies is not satisfied with our response to current or future inquiries, the resultant investigations and potential fines or other penalties could harm our business.

We are subject to laws relating to the use and transfer of personally identifiable information about our users and their transfers, especially outside of the U.S. Violation of these laws, which in many cases apply not only to third-party transfers but also to transfers of information between ourselves and our subsidiaries, and between ourselves, our subsidiaries and our commercial partners could subject us to significant penalties and negative publicity and could adversely affect our company.

Third parties or governmental agencies may view our behavior as anti-competitive

Third parties have in the past and may in the future allege that actions taken by us violate the antitrust or competition laws of the U.S. or other countries, or otherwise constitute unfair competition. Such claims typically are very expensive to defend, involve negative publicity and diversion of

Table of Contents

management time and effort and could result in significant judgments against us, all of which would adversely affect us.

We have provided information to the antitrust division of the Department of Justice in connection with an inquiry into our conduct with respect to auction aggregators including our licensing program and a previously settled lawsuit against Bidder's Edge. Should the division decide to take action against us, or should the Department of Justice or any other antitrust agency open other investigations of our activities, we would likely be harmed by negative publicity, the costs of the action, possible private antitrust lawsuits, the diversion of management time and effort and penalties we might suffer if we ultimately were not to prevail.

Some of our businesses are subject to regulation and others may be in the future

Both Butterfields and Kruse are subject to regulation in some jurisdictions governing the manner in which live auctions are conducted. Both are required to obtain licenses in these jurisdictions with respect to their business or to permit the sale of categories of items (e.g., wine, automobiles and real estate). These licenses generally must be renewed regularly and are subject to revocation for violation of law, violation of the regulations governing auctions in general or the sale of the particular item and other events. If either company was unable to renew a license or had a license revoked, its business would be harmed. In addition, changes to the regulations or the licensure requirements could increase the complexity and the cost of doing auctions, thereby harming us.

As our activities and the types of goods listed on our site expand, state regulatory agencies may claim that we are subject to licensure in their jurisdiction, either with respect to our services in general, or in order to sell certain types of goods (e.g., real estate, boats, automobiles, etc.). These claims could result in costly litigation or could require us to change our manner of doing business in ways that increase our costs or reduce our revenues or force us to prohibit listings of certain items. We could also be subject to fines or other penalties. Any of these outcomes could harm our business.

As we have expanded internationally, we have become subject to additional regulations, including regulations on the transmission of personal information. These laws may require costly changes to our business practices. If we are found to have violated any of these laws, we could be subject to fines or penalties, and our business could be harmed.

Our business may be subject to sales and other taxes

We do not collect sales or other similar taxes on goods or services sold by users through our service. One or more states may seek to impose sales or use tax collection or record keeping obligations on companies such as ours that engage in or facilitate online commerce. Several proposals have been made at the state and local level that would impose additional taxes on the sale of goods and services through the Internet. These proposals, if adopted, could substantially impair the growth of e-commerce, and could diminish our opportunity to derive financial benefit from our activities. In 1998, the U.S. federal government enacted legislation prohibiting states or other local authorities from imposing new taxes on Internet commerce for a period of three years. This tax moratorium ended on October 21, 2001. Unless Congress enacts new moratorium legislation, states may now enact new discriminatory internet taxes on our business, which could adversely affect us. Even if a moratorium is reenacted, it would not prohibit states or the Internal Revenue Service from collecting taxes on our income, if any, or from collecting taxes that are due under existing tax rules. A successful assertion by one or more states or any foreign country that we should collect sales or other taxes on the exchange of merchandise on our system would harm our business.

Table of Contents

Companies that handle payments, including our subsidiaries Billpoint, Half.com and Internet Auction, may be subject to additional regulation

The Half.com business model involves the handling of payments by buyers for the items listed by Half.com's sellers. Internet Auction also has a business model involving the handling of payments by buyers. Billpoint handles its customer funds as a provider of Internet payment solutions. Businesses that handle consumers' funds are subject to numerous regulations, including those related to banking, credit cards, escrow, fair credit reporting, privacy of financial records and others. Billpoint is a new business with a relatively novel approach to facilitating payments. It is not yet known how regulatory agencies will treat Billpoint. The cost and complexity of Billpoint's business may increase if certain regulations are deemed to apply to its business. In addition to the need to comply with these regulations, Billpoint's business is also subject to risks of fraud, the need to grow systems and processes rapidly if its products are well received, a high level of competition, including larger and better financed competitors and the need to coordinate systems and policies among itself, us and Wells Fargo Bank, which is Billpoint's backend provider of payment services. Similarly, Half.com may be subject to certain regulations regarding payments and the cost and complexity of its business may increase if these regulations are deemed to apply to its business.

We are subject to risks associated with information disseminated through our service

The law relating to the liability of online services companies for information carried on or disseminated through their services is currently unsettled. Claims could be made against online services companies under both U.S. and foreign law for defamation, libel, invasion of privacy, negligence, copyright or trademark infringement, or other theories based on the nature and content of the materials disseminated through their services. Several private lawsuits seeking to impose liability upon us under a number of these theories have been brought against us. In addition, federal, state and foreign legislation has been proposed that imposes liability for or prohibits the transmission over the Internet of certain types of information. Our service features a Feedback Forum, which includes information from users regarding other users. Although all such feedback is generated by users and not by us, it is possible that a claim of defamation or other injury could be made against us for content posted in the Feedback Forum. Claims like these are more likely and have a higher probability of success in jurisdictions outside the U.S. If we become liable for information provided by our users and carried on our service in any jurisdiction in which we operate, we could be directly harmed and we may be forced to implement new measures to reduce our exposure to this liability. This may require us to expend substantial resources and/or to discontinue certain service offerings, which would negatively affect our financial results. In addition, the increased attention focused upon liability issues as a result of these lawsuits and legislative proposals could harm our reputation or otherwise impact the growth of our business. Any costs incurred as a result of this liability or asserted liability could harm our business.

We are subject to intellectual property and other litigation

On April 25, 2000, we were served with a lawsuit, *Gentry et.al. v. eBay, Inc. et.al.*, filed in Superior Court in San Diego, California. The lawsuit was filed on behalf of a purported class of eBay users who purchased allegedly forged autographed sports memorabilia on eBay. The lawsuit claims we were negligent in permitting certain named (and other unnamed) defendants to sell allegedly forged autographed sports memorabilia on eBay. In addition, the lawsuit claims we violated California unfair competition law and a section of the California Civil Code which prohibits dealers from selling sports memorabilia without a Certificate of Authenticity. On January 26, 2001, the court issued a ruling dismissing all claims against us in the lawsuit. The court ruled that our business falls within the safe harbor provisions of 47 USC 230, which grants Internet service providers such as eBay with immunity from state claims based on the conduct of third parties. The court also noted that we were not a dealer

Table of Contents

under California law and thus not required to provide certificates of authenticity with autographs sold over our site by third parties. All counts of the plaintiffs' suit were dismissed with prejudice as to eBay. The plaintiffs have appealed this ruling. We believe we have meritorious defenses and intend to defend ourselves vigorously.

On April 25, 2001, our European subsidiaries, eBay GMBH and eBay International AG, were sued by Montres Rolex S.A. and certain Rolex affiliates (Rolex) in the regional court of Cologne, Germany. Rolex alleged that our subsidiary was infringing Rolex's trademarks as result of users selling counterfeit Rolex watches through our German website. The suit also alleges unfair competition. Rolex is seeking an order forbidding the sale of Rolex watches on the website as well as damages. We believe that we have meritorious defenses against this claim and intend to defend ourselves vigorously.

Other third parties have from time to time claimed, and others may claim in the future that we have infringed their past, current or future intellectual property rights. We have in the past been forced to litigate such claims. We may become more vulnerable to such claims as laws such as the Digital Millennium Copyright Act are interpreted by the courts and as we expand into jurisdictions where the underlying laws with respect to the potential liability of online intermediaries like ourselves is less favorable. We expect that we will increasingly be subject to infringement claims as the geographical reach of our services expands. These claims, whether meritorious or not, could be time-consuming, result in costly litigation, cause service upgrade delays, require expensive changes in our methods of doing business or could require us to enter into costly royalty or licensing agreements, if available. As a result, these claims could harm our business.

On September 26, 2001 a complaint was filed by MercExchange LLC against us, our Half.com subsidiary and ReturnBuy, Inc. in the Eastern District of Virginia (No. 2:01-CV-736) alleging infringement of three patents and seeking a permanent injunction and damages (including treble damages for willful infringement). We have not yet answered this complaint but believe we have meritorious defenses and intend to defend ourselves vigorously. However, even if successful, our defense against this action could be costly and divert our management's time. If the plaintiff was to prevail on all of its claims, we might be forced to pay significant damages and licensing fees, modify our business practices or even be enjoined from practicing a significant part of our U.S. business. Any such results could materially harm our business.

From time to time, we are involved in other disputes that arise in the ordinary course of business. We believe that the ultimate resolution of these other disputes will not have a material adverse impact on our financial position or results of operations.

The inability to expand our systems may limit our growth

We seek to generate a high volume of traffic and transactions on our service. The satisfactory performance, reliability and availability of our websites, processing systems and network infrastructure are critical to our reputation and our ability to attract and retain large numbers of users. Our revenues depend primarily on the number of items listed by users, the volume of user transactions that are successfully completed and the final prices paid for the items listed. We need to expand and upgrade our technology, transaction processing systems and network infrastructure both to meet increased traffic on our site and to implement new features and functions, including those required under our contracts with third parties. We may be unable to accurately project the rate or timing of increases, if any, in the use of our service or to expand and upgrade our systems and infrastructure to accommodate any increases in a timely fashion.

We use internally developed systems to operate our service for transaction processing, including billing and collections processing. We must continually improve these systems in order to accommodate the level of use of our websites. In addition, we may add new features and functionality to our services that would result in the need to develop or license additional technologies. We capitalize hardware and

Table of Contents

software costs associated with this development in accordance with generally accepted accounting principles and include such amounts in property and equipment. Our inability to add additional software and hardware or to upgrade our technology, transaction processing systems or network infrastructure to accommodate increased traffic or transaction volume could have adverse consequences. These consequences include unanticipated system disruptions, slower response times, degradation in levels of customer support, impaired quality of the users' experiences of our service and delays in reporting accurate financial information. Our failure to provide new features or functionality also could result in these consequences. We may be unable to effectively upgrade and expand our systems in a timely manner or to integrate smoothly any newly developed or purchased technologies with our existing systems. These difficulties could harm or limit our ability to expand our business.

Unauthorized break-ins or other assaults on our service could harm our business

Our servers are vulnerable to computer viruses, physical or electronic break-ins and similar disruptions, which could lead to interruptions, delays, loss of data, public release of confidential data or the inability to complete customer transactions. In addition, unauthorized persons may improperly access our data. We have experienced an unauthorized break-in by a hacker who has stated that he could, in the future, damage or change our system or take confidential information. We have also experienced denial of service type attacks on our system that have made all or portions of our websites unavailable for periods of time. These and other types of attacks could harm us. Actions of this sort may be very expensive to remedy and could damage our reputation and discourage new and existing users from using our service.

System failures could harm our business

Substantially all of our computer hardware for operating our services (other than Half.com) currently is located at the facilities of Exodus Communications, Inc. in Santa Clara, California and AboveNet Communications, Inc in San Jose, California. The computer hardware for the Half.com service is located in the facilities of Level 3 Communications, Inc. in Philadelphia, Pennsylvania. These systems and operations are vulnerable to damage or interruption from earthquakes, floods, fires, power loss, telecommunication failures and similar events. They are also subject to break-ins, sabotage, intentional acts of vandalism and to potential disruption if the operators of these facilities have financial difficulties. Exodus has filed for Chapter 11 protection under the bankruptcy laws, although it is continuing to provide hosting services to us. We do not maintain fully redundant systems or alternative providers of hosting services, and we do not carry business interruption insurance sufficient to compensate us for losses that may occur. Despite any precautions we may take, the occurrence of a natural disaster, a decision to close a facility we are using without adequate notice for financial reasons or other unanticipated problems at any of the Exodus, AboveNet or Level 3 facilities could result in lengthy interruptions in our services. In addition, the failure by Exodus, AboveNet or Level 3 to provide our required data communications capacity could result in interruptions in our service. Any damage to or failure of our systems could result in interruptions in our service. Interruptions in our service will reduce our revenues and profits, and our future revenues and profits will be harmed if our users believe that our system is unreliable.

We have experienced system failures from time to time. Our primary website has been interrupted for periods of up to 22 hours. In addition to placing increased burdens on our engineering staff, these outages create a flood of user questions and complaints that need to be addressed by our customer support personnel. Any unscheduled interruption in our service results in an immediate loss of revenues that can be substantial and may cause some users to switch to our competitors. If we experience frequent or persistent system failures, our reputation and brand could be permanently harmed. We have been taking steps to increase the reliability and redundancy of our system. These steps are expensive, reduce our margins and may not be successful in reducing the frequency or duration of unscheduled downtime.

Table of Contents

Our stock price has been and may continue to be extremely volatile

The trading price of our common stock has been and is likely to be extremely volatile. Our stock price could be subject to wide fluctuations in response to a variety of factors, including the following:

- actual or anticipated variations in our quarterly operating results;
- unscheduled system downtime;
- additions or departures of key personnel;
- announcements of technological innovations or new services by us or our competitors;
- changes in financial estimates by securities analysts;
- conditions or trends in the Internet and online commerce industries;
- changes in the market valuations of other Internet companies;
- developments in Internet regulation;
- announcements by us or our competitors of significant acquisitions, strategic partnerships, joint ventures or capital commitments;
- unanticipated economic or political events
- sales of our common stock or other securities in the open market; and

other events or factors, including these described in this Risk Factors section and others that may be beyond our control.

In addition, the trading price of Internet stocks in general, and ours in particular, have experienced extreme price and volume fluctuations in recent periods. These fluctuations often have been unrelated or disproportionate to the operating performance of these companies. Notwithstanding a sharp decline in the prices of Internet stocks in general, the valuation of our stock remains extraordinarily high based on conventional valuation standards such as price-to-earnings and price-to-sales ratios. The trading price of our common stock has increased enormously from the initial public offering price. This trading price and valuation may not be sustained. Negative changes in the public's perception of the prospects of Internet or e-commerce companies have in the past and may in future depress our stock price regardless of our results. Other broad market and industry factors may decrease the market price of our common stock, regardless of our operating performance. Market fluctuations, as well as general political and economic conditions, such as recession or interest rate or currency rate fluctuations, also may decrease the market price of our common stock. In the past, following declines in the market price of a company's securities, securities class-action litigation often has been instituted. Litigation of this type, if instituted, could result in substantial costs and a diversion of management's attention and resources.

Table of Contents

New and existing regulations could harm our business

We are subject to the same foreign, federal, state and local laws as other companies conducting business on the Internet. Today there are relatively few laws specifically directed towards online services. However, due to the increasing popularity and use of the Internet and online services, many laws relating to the Internet are being debated at the state and federal levels (both in the U.S. and abroad) and it is possible that laws and regulations will be adopted with respect to the Internet or online services. These laws and regulations could cover issues such as user privacy, freedom of expression, pricing, fraud, content and quality of products and services, taxation, advertising, intellectual property rights and information security. Applicability to the Internet of existing laws governing issues such as property ownership, copyrights and other intellectual property issues, taxation, libel, obscenity and personal privacy is uncertain. The vast majority of these laws was adopted prior to the advent of the Internet and related technologies and, as a result, do not contemplate or address the unique issues of the Internet and related technologies. Those laws that do reference the Internet, such as the Digital Millennium Copyright Act and the European Union's Directive on Distance Selling, are only beginning to be interpreted by the courts and their applicability and scope are, therefore, uncertain. In addition, numerous states and foreign jurisdictions, including the State of California, where our headquarters are located, have regulations regarding how auctions may be conducted and the liability of auctioneers in conducting such auctions. No final legal determination has been made with respect to the applicability of the California regulations to our business to date and little precedent exists in this area. Several states are considering imposing these regulations upon us or our users, which could harm our business. In addition, as the nature of the products listed by our users change, we may become subject to new regulatory restrictions.

Several states have proposed legislation that would limit the uses of personal user information gathered online or require online services to establish privacy policies. The Federal Trade Commission also has settled several proceedings regarding the manner in which personal information is collected from users and provided to third parties. Specific statutes intended to protect user privacy have been passed in many non-U.S. jurisdictions, including virtually every non-U.S. jurisdiction in which we currently have a website. Compliance with these laws, given the tight integration of our systems across different countries and the need to move data to facilitate transactions amongst our users (e.g., to payment companies, shipping companies, etc.) is both necessary and difficult. Failure to comply could subject us to lawsuits, fines, statutory damages, adverse publicity and other losses that could harm our business. Changes to existing laws or the passage of new laws intended to address these issues could directly affect the way we do business or could create uncertainty on the Internet. This could reduce demand for our services, increase the cost of doing business as a result of litigation costs or increased service delivery costs, or otherwise harm our business. In addition, because our services are accessible worldwide, and we facilitate sales of goods to users worldwide, foreign jurisdictions may claim that we are required to comply with their laws. For example, a French court has recently ruled that a U.S. website must comply with French laws regarding content. As we have expanded our international activities, we have become obligated to comply with the laws of the countries in which we operate. Laws regulating Internet companies outside of the U.S. may be less favorable than those in the U.S., giving greater rights to consumers, content owners and users. Compliance may be more costly or may require us to change our business practices or restrict our service offerings relative to those in the U.S. Our failure to comply with foreign laws could subject us to penalties ranging from fines to bans on our ability to offer our services.

Our business has been seasonal

Our results of operations historically have been somewhat seasonal in nature because many of our users reduce their activities on our websites during the Thanksgiving and Christmas holidays and with the onset of good weather. We have historically experienced our strongest quarter of online growth in our first fiscal quarter, although our shift to more practical items may cause our seasonal patterns to look more like a typical retailer. Both Butterfields and Kruse have significant quarter-to-quarter variations in their results of operations depending on the timing of auctions and the availability of high quality items

Table of Contents

from large collections and estates. Butterfields typically has its best operating results in the traditional fall and spring auction seasons and has historically incurred operating losses in the first and third quarters. Kruse typically sees a seasonal peak in operations in the third quarter. Seasonal or cyclical variations in our business may become more pronounced over time and may harm our results of operations in the future.

We are dependent on the continued growth of online commerce

The business of selling goods over the Internet, particularly through personal trading, is new and dynamic. Our future net revenues and profits will be substantially dependent upon the widespread acceptance of the Internet and online services as a medium for commerce by consumers. Rapid growth in the use of and interest in the Internet and online services is a recent phenomenon. This acceptance and use may not continue. Even if the Internet is accepted, concerns about fraud, privacy and other problems may mean that a sufficiently broad base of consumers will not adopt the Internet as a medium of commerce. In particular, our websites require users to make publicly available personal information that some potential users may be unwilling to provide. These concerns may increase as additional publicity over privacy issues on eBay or generally over the Internet increase. Market acceptance for recently introduced services and products over the Internet is highly uncertain, and there are few proven services and products. In order to expand our user base, we must appeal to and acquire consumers who historically have used traditional means of commerce to purchase goods. If these consumers prove to be less active than our earlier users, and we are unable to gain efficiencies in our operating costs, including our cost of acquiring new customers, our business could be adversely impacted.

We are dependent on key personnel

Our future performance will be substantially dependent on the continued services of our senior management and other key personnel. Our future performance also will depend on our ability to retain and motivate our other officers and key personnel. The loss of the services of any of our executive officers or other key employees could harm our business. We do not have long-term employment agreements with any of our key personnel, we do not maintain any key person life insurance policies and many of our senior officers will fully vest the large majority of their equity incentives within the next twelve months. Our new businesses are all dependent on attracting and retaining key personnel. The land-based auction businesses are particularly dependent on specialists and senior management because of the relationships these individuals have established with sellers who consign property for sale at auction. We have had some turnover of these personnel, and continued losses of these individuals could result in the loss of significant future business and would harm us. In addition, employee turnover and other labor problems frequently increases during the period following an acquisition as employees evaluate possible changes in compensation, culture, reporting relationships and the direction of the business. These labor issues maybe more severe if employees receive no significant financial return from the acquisition transaction, as has been the case with several of our recent acquisitions. Such increased turnover could increase our costs and reduce our future revenues. Our future success also will depend on our ability to attract, train, retain and motivate highly skilled technical, managerial, marketing and customer support personnel. Competition for these personnel is intense, especially for engineers and other professionals, especially in the San Francisco Bay Area, and we may be unable to successfully attract, integrate or retain sufficiently qualified personnel. In making employment decisions, particularly in the Internet and high-technology industries, job candidates often consider the value of the stock options they are to receive in connection with their employment. Fluctuations in our stock price may make it more difficult to retain and motivate employees whose stock option strike prices are substantially above current market prices.

Table of Contents

California power outages could adversely affect us

The State of California is currently experiencing a chronic shortage of power and, as a result, power outages may occur. Although we have emergency backup power capabilities at the facilities of Exodus, AboveNet and Level 3, and limited backup power at our headquarters, repeated or lengthy power outages may adversely affect our business.

Our offline auction businesses need to continue to acquire auction properties

The businesses of Butterfields and Kruse are dependent on the continued acquisition of high quality auction properties from sellers. Their future success will depend in part on their ability to maintain an adequate supply of high quality auction property, particularly fine and decorative arts and collectibles and collectible automobiles, respectively. There is intense competition for these pieces with other auction companies and dealers. In addition, a small number of key senior management and specialists maintain the relationships with the primary sources of auction property and the loss of these individuals could harm the businesses of Butterfields and Kruse.

Our offline auction businesses could suffer losses from price guarantees, advances or rescissions of sales

In order to secure high quality auction properties from sellers, Butterfields and Kruse may give a guaranteed minimum price or a cash advance to a seller, based on the estimated value of the property. If the auction proceeds are less than the amount guaranteed, or less than the amount advanced and the seller does not repay the difference, the company involved will suffer a loss. In addition, under certain circumstances a buyer who believes that an item purchased at auction does not have good title, provenance or authenticity may rescind the purchase. Under these circumstances, the company involved will lose its commissions and fees on the sale even if the seller, in accordance with the terms and conditions of sale, in turn accepts back the item and returns the funds he or she received from the sale.

We are subject to the risks of owning real property

In connection with the acquisitions of Kruse and Butterfields we acquired real property including land, buildings and interests in partnerships holding land and buildings. We have no experience in managing real property. Ownership of this property subjects us to new risks, including:

the possibility of environmental contamination and the costs associated with fixing any environmental problems;

adverse changes in the value of these properties, due to interest rate changes, changes in the neighborhoods in which the properties are located, or other factors;

the possible need for structural improvements in order to comply with zoning, seismic, disability act or other requirements; and

possible disputes with tenants, partners or others.

Our market is intensely competitive

Depending on the category of product, we currently or potentially compete with a number of companies serving particular categories of goods as well as those serving broader ranges of goods. The Internet is a new, rapidly evolving and intensely competitive area. We expect competition to intensify in the future as the barriers to entry are relatively low, and current and new competitors can launch new sites at a nominal cost using commercially available software. Our broad-based competitors include the vast majority of traditional department and general merchandise stores as well as emerging online retailers.

Table of Contents

These include most prominently: Wal-Mart, Kmart, Target, Sears, Macy's, JC Penney, Costco, Office Depot, Staples, OfficeMax and Sam's Club as well as Amazon.com, Buy.com, AOL.com, Yahoo! shopping and MSN.

In addition, we face competition from local, regional and national specialty retailers and exchanges in each of its categories of products. For example:

Antiques: Christies, eHammer, Sotheby's/Sothebys.com, Phillips (LVMH)

Coins & Stamps: Collectors Universe, Heritage, US Mint, Bowers and Morena

Collectibles: Franklin Mint, Go Collect, Collectiblestoday.com, wizardworld.com, Russ Cochran Comic Art Auctions, All Star Auctions

Musical Instruments: Guitar Center, Sam Ash, Mars Music, Gbase.com, Harmony-Central.com

Sports Memorabilia: Beckett's, Collectors Universe, Mastro, Leylands, ThePit.com, Superior

Toys, Bean Bag Plush: Amazon.com, KB Toys, ZanyBrainy.com, Wal-Mart.com

Premium Collectibles: Christies, DuPont Registry, Greg Manning Auctions, iCollector, Lycos / Skinner Auctions, Millionaire.com, Phillips (LVMH), Sotheby's, Sothebys.com

Automotive (used cars): Autobytel.com, AutoVantage.com, AutoWeb.com, Barrett-Jackson, CarPoint, Collectorcartraderonline.com, eClassics.com, Edmunds, CarsDirect.com, Hemmings, imotors.com, vehix.com, newspaper classifieds, used car dealers

Books, Movies, Music: Amazon.com, Barnes & Noble, Barnesandnoble.com, Alibris.com, Blockbuster, BMG, Columbia House, Best Buy, CDNow, Express.com, Emusic.com

Clothing: Bluefly.com, Dockers.com, FashionMall.com, The Gap, J. Crew, LandsEnd.com, The Limited, Macy's, The Men's Wearhouse, Ross

Computers & Consumer Electronics: Best Buy, Buy.com, Circuit City, Compaq, CompUSA, Dell, Fry's Electronics, Gateway, The Good Guys, MicroWarehouse, Shopping.com, 800.com, Computer Discount Warehouse, PC Connection, computer and consumer electronics retailers

Home & Garden: IKEA, Crate & Barrel, Home Depot, Pottery Barn, Ethan Allen, Frontgate, Burpee.com

Jewelry: Ashford.com, Mondera.com

Pottery & Glass: Just Glass, Pottery Auction, Go Collect

Sporting Goods/Equipment: dsports.com, FogDog.com, Footlocker, Gear.com, golfclubexchange, MVP.com, PlanetOutdoors.com, Play It Again Sports, REI, Sports Authority, Sportsline.com

Tickets: Ticketmaster, Tickets.com

Tool/Equipment/Hardware: Home Depot, HomeBase, Amazon.com, Ace Hardware, OSH

Table of Contents

Business-to-Business: Ariba, BidFreight.com, Bid4Assets, BizBuyer.com, bLiquid.com, Buyer Zone, CloseOutNow.com, Commerce One, Concur Technologies, DoveBid, FreeMarkets, Iron Planet, labx.com, Oracle, Overstock.com, PurchasePro.com, RicardoBiz.com, Sabre, SurplusBin.com, Ventro, VerticalNet

Additionally, we face competition from various online auction sites including: Amazon.com, Surplus Auction, uBid, Yahoo! Auctions and a large number of other companies using an auction format for consumer-to-consumer or business-to-consumer sales. Overseas, we face competition from Yahoo! Auctions in most countries and from a large number of regional and national competitors in each country. Different aspects of our fixed priced business compete with the major internet portals (AOL, MSN, Yahoo and comparable companies outside the U.S.) as well as Amazon.com and others.

The principal competitive factors for eBay include the following:

ability to attract buyers;

volume of transactions and selection of goods;

customer service; and

brand recognition.

With respect to our online competition, additional competitive factors include:

community cohesion and interaction;

system reliability;

reliability of delivery and payment;

website convenience and accessibility;

level of service fees; and

quality of search tools.

Some current and potential competitors have longer company operating histories, larger customer bases and greater brand recognition in other business and Internet spaces than we do. Some of these competitors also have significantly greater financial, marketing, technical and other resources. Other online trading services may be acquired by, receive investments from or enter into other commercial relationships with larger, well-established and well-financed companies. As a result, some of our competitors with other revenue sources may be able to devote more resources to marketing and promotional campaigns, adopt more aggressive pricing policies and devote substantially more resources to website and systems development than we can. Increased competition may result in reduced operating margins, loss of market share and diminished value of our brand. Some of our competitors have offered services for free, and others may do this as well. We may be unable to compete successfully against current and future competitors.

In order to respond to changes in the competitive environment, we may, from time to time, make pricing, service or marketing decisions or acquisitions that could harm our business. For example, we

Table of Contents

have implemented an insurance program that generally insures items up to a value of \$200, with a \$25 deductible, for users with a non-negative feedback rating at no cost to the user. New technologies may increase the competitive pressures by enabling our competitors to offer a lower cost service. Some Internet-based applications that direct Internet traffic to certain websites may channel users to trading services that compete with us.

Although we have established Internet traffic arrangements with several large online services and search engine companies, these arrangements may not be renewed on commercially reasonable terms. Even if these arrangements are renewed, they may not result in increased usage of our service. In addition, companies that control access to transactions through network access or Internet browsers could promote our competitors or charge us substantial fees for inclusion.

The offline auction business is intensely competitive. Butterfields competes with two larger and better known auction companies, Sotheby's Holdings, Inc. and Christie's International plc, as well as numerous regional auction companies. To the extent that these companies increase their focus on the middle market properties that form the core of Butterfields' business or in the western U.S., its business may suffer. Kruse is subject to competition from numerous regional competitors. In addition, competition with Internet-based auctions may harm the land-based auction business. Although Billpoint's business is new, several new companies have entered this space, including competitors who are offering free services and significant promotional incentives, and large companies, including banks and credit card companies, are also beginning to enter this space. Half.com competes directly with online retailers in its product categories such as Amazon.com, which offers a directly competitive service, as well as with traditional sellers of used books, videos and CDs, consumer electronics, sporting goods and other products.

Our business is dependent on the development and maintenance of the Internet infrastructure

The success of our service will depend largely on the development and maintenance of the Internet infrastructure. This includes maintenance of a reliable network backbone with the necessary speed, data capacity and security, as well as timely development of complementary products, for providing reliable Internet access and services. The Internet has experienced, and is likely to continue to experience, significant growth in the numbers of users and amount of traffic. If the Internet continues to experience increased numbers of users, increased frequency of use or increased bandwidth requirements, the Internet infrastructure may be unable to support the demands placed on it. In addition, the performance of the Internet may be harmed by increased number of users or bandwidth requirements or by viruses, worms and similar programs. The Internet has experienced a variety of outages and other delays as a result of damage to portions of its infrastructure, and it could face outages and delays in the future. These outages and delays could reduce the level of Internet usage as well as the level of traffic and the processing transactions on our service.

Our business is subject to online commerce security risks

A significant barrier to online commerce and communications is the secure transmission of confidential information over public networks. Our security measures may not prevent security breaches. Our failure to prevent security breaches could harm our business. Currently, a significant number of our users authorize us to bill their credit card accounts directly for all transaction fees charged by us. Billpoint's users routinely provide credit card and other financial information. We rely on encryption and authentication technology licensed from third parties to provide the security and authentication technology to effect secure transmission of confidential information, including customer credit card numbers. Advances in computer capabilities, new discoveries in the field of cryptography or other developments may result in a compromise or breach of the technology used by us to protect customer transaction data. A number of websites have reported breaches of their security. Any compromise of our

Table of Contents

security could harm our reputation and, therefore, our business. In addition, a party who is able to circumvent our security measures could misappropriate proprietary information or cause interruptions in our operations. We may need to expend significant resources to protect against security breaches or to address problems caused by breaches. These issues are likely to become more difficult as we expand the number of places where we operate. Security breaches could damage our reputation and expose us to a risk of loss or litigation and possible liability. Our insurance policies carry low coverage limits, which may not be adequate to reimburse us for losses caused by security breaches.

We must keep pace with rapid technological change to remain competitive

Our competitive space is characterized by rapidly changing technology, evolving industry standards, frequent new service and product introductions and enhancements and changing customer demands. These characteristics are worsened by the emerging and changing nature of the Internet. Our future success therefore will depend on our ability to adapt to rapidly changing technologies, to adapt our services to evolving industry standards and to improve the performance, features and reliability of our service. Our failure to adapt to such changes would harm our business. New technologies, such as the development of a peer-to-peer personal trading technology, could adversely affect us. In addition, the widespread adoption of new Internet, networking or telecommunications technologies or other technological changes could require substantial expenditures to modify or adapt our services or infrastructure.

We need to develop new services, features and functions in order to expand

We plan to expand our operations by developing new or complementary services, products or transaction formats or expanding the breadth and depth of services. We may be unable to expand our operations in a cost-effective or timely manner. Even if we do expand, we may not maintain or increase our overall acceptance. If we launch a new business or service that is not favorably received by consumers, it could damage our reputation and diminish the value of our brand. We anticipate that future services will include pre-trade and post-trade services.

We are pursuing strategic relationships with third parties to provide many of these services. Because we use third parties to deliver these services, we may be unable to control the quality of these services, and our ability to address problems if any of these third parties fails to perform adequately will be reduced. Expanding our operations in this manner also will require significant additional expenses and development, operations and other resources and will strain our management, financial and operational resources. The lack of acceptance of any new services could harm our business.

Our growth will depend on our ability to develop our brand

We believe that our historical growth has been largely attributable to word of mouth. We have benefited from frequent and high visibility media exposure both nationally and locally. We believe that continuing to strengthen our brand will be critical to achieving widespread acceptance of our service. Promoting and positioning our brand will depend largely on the success of our marketing efforts and our ability to provide high quality services. In order to promote our brand, we will need to increase our marketing budget and otherwise increase our financial commitment to creating and maintaining brand loyalty among users. Brand promotion activities may not yield increased revenues, and even if they do, any increased revenues may not offset the expenses we incurred in building our brand. If we do attract new users to our service, they may not conduct transactions over our service on a regular basis. If we fail to promote and maintain our brand or incur substantial expenses in an unsuccessful attempt to promote and maintain our brand, our business would be harmed.

Table of Contents

We may be unable to protect or enforce our own intellectual property rights adequately

We regard the protection of our URLs, copyrights, service marks, trademarks, trade dress and trade secrets as critical to our success. We rely on a combination of patent, copyright, trademark, service mark and trade secret laws and contractual restrictions to protect our proprietary rights in products and services. We have entered into confidentiality and invention assignment agreements with our employees and contractors, and nondisclosure agreements with parties with whom we conduct business in order to limit access to and disclosure of our proprietary information. These contractual arrangements and the other steps taken by us to protect our intellectual property may not prevent misappropriation of our technology or deter independent third-party development of similar technologies. We pursue the registration of our URLs, trademarks and service marks in the U.S. and internationally. Effective copyright, service mark, trademark, trade dress and trade secret protection is very expensive to maintain and may require litigation. Protection may not be available in every country in which our services are made available online. Furthermore, we must also protect our URLs in an increasing number of jurisdictions, a process that is expensive and may not be successful in every location. We have licensed in the past, and expect to license in the future, certain of our proprietary rights, such as trademarks or copyrighted material, to third parties. These licensees may take actions that might diminish the value of our proprietary rights or harm our reputation. We also rely on certain technologies that we license from third parties, such as Oracle Corporation, IBM, Microsoft and Sun Microsystems Inc. These third-party technology licenses may not continue to be available to us on commercially reasonable terms. The loss of these technologies could require us to obtain substitute technologies of lower quality or performance standards or at greater cost.

Some anti-takeover provisions may affect the price of our common stock

The Board of Directors has the authority to issue up to 10,000,000 shares of preferred stock and to determine the preferences, rights and privileges of those shares without any further vote or action by the stockholders. The rights of the holders of common stock may be harmed by the rights of the holders of any preferred stock that may be issued in the future. Some provisions of our certificate of incorporation and bylaws could have the effect of making it more difficult for a third party to acquire a majority of our outstanding voting stock. These include provisions that provide for a classified board of directors, prohibit stockholders from taking action by written consent and restrict the ability of stockholders to call special meetings. We are also subject to provisions of Delaware law that prohibit us from engaging in any business combination with any interested stockholder for a period of three years from the date the person became an interested stockholder, unless certain conditions are met. This restriction could have the effect of delaying or preventing a change of control.
