Approximate date of commencement of proposed sale to the public: As soon as practicable after the effective date of this Registration Statement.

If any of the securities being registered on this Form are being offered on a delayed or continuous basis pursuant to Rule 415 under the Securities Act of 1933, check the following box. "

If this Form is filed to register additional securities for an offering pursuant to Rule 462(b) under the Securities Act, please check the following box and list the Securities Act registration statement number of the earlier effective registration statement for the same offering. "

If this Form is a post-effective amendment filed pursuant to Rule 462(c) under the Securities Act, check the following box and list the Securities Act registration statement number of the earlier effective registration statement for the same offering. "

If this Form is a post-effective amendment filed pursuant to Rule 462(d) under the Securities Act, check the following box and list the Securities Act registration statement number of the earlier effective registration statement for the same offering. "

The Registrant hereby amends this Registration Statement on such date or dates as may be necessary to delay its effective date until the Registrant shall file a further amendment which specifically states that this Registration Statement shall thereafter become effective in accordance with Section 8(a) of the Securities Act of 1933 or until the Registration Statement shall become effective on such date as the Commission, acting pursuant to said Section 8(a), may determine.

The information in this prospectus is not complete and may be changed. We may not sell these securities until the registration statement filed with the Securities and Exchange Commission is effective. This prospectus is not an offer to sell these securities and it is not soliciting an offer to buy these securities in any jurisdiction where the offer or sale is not permitted.

SUBJECT TO COMPLETION DATED JANUARY 26, 2007

Prospectus

5,000,000 Shares

Common Stock

We are offering 5,000,000 shares of our common stock. Our common stock is currently quoted on the Over the Counter Bulletin Board (OTCBB) under the symbol EUSEF.OB. On January 25, 2007, the closing price of our common stock was \$8.50 per share. We have made application to have our common stock listed on the NASDAQ Global Market upon completion of this offering.

Investing in our common stock involves a high degree of risk. See the section of this prospectus entitled Risk Factors beginning on page 12 to read about the risks you should consider before buying shares of our common stock.

	Per Share	Total
Public Offering Price	\$	\$
Underwriting Discounts and Commissions ⁽¹⁾	\$	\$
Proceeds, Before Expenses, To Us	\$	\$

(1)

Excludes: a financial advisory fee of 0.5% of the gross proceeds of this offering payable to Cantor Fitzgerald & Co. and includes \$50,000 non-accountable expense allowance payable to the underwriters for the reimbursement of certain out of pocket expenses.

The underwriters have a 30-day option to purchase up to 750,000 additional shares of our common stock from us to cover any over-allotments, if any, at the offering price, less underwriting discounts and commissions.

Delivery of shares will be made on or about , 2007.

Neither the Securities and Exchange Commission nor any state securities commission has approved or disapproved of these securities or passed upon the adequacy or accuracy of this prospectus. Any representation to the contrary is a criminal offense.

We have not authorized anyone to give any information or to make any representations other than those contained in this prospectus. Do not rely upon any information or representations made outside of this prospectus. This prospectus is not an offer to sell, and it is not soliciting an offer to buy (1) any securities other than shares of our common stock or (2) shares of our common stock in any circumstances in which our offer or solicitation is unlawful. The information contained in this prospectus may change after the date of this prospectus. Do not assume after the date of this prospectus that the information contained in this prospectus is still correct.

ENFORCEABILITY OF CIVIL LIABILITIES

We are a Marshall Islands company and our executive offices are located outside of the United States of America in Maroussi, Greece. Some of our directors and officers and some of the experts named herein reside outside the United States of America. In addition, a substantial portion of our assets and the assets of our directors, officers and experts are located outside of the United States of America. As a result, you may have difficulty serving legal process within the United States of America upon us or any of these persons. You may also have difficulty enforcing, both in and outside the United States of America, judgments you may obtain in United States of America courts against us or these persons in any action, including actions based upon the civil liability provisions of United States of America federal or state securities laws. Furthermore, there is substantial doubt that the courts of the Marshall Islands or Greece would enter judgments in original actions brought in those courts predicated on United States of America federal or state securities laws.

INTERNATIONAL DRYBULK AND CONTAINER SHIPPING INDUSTRY DATA

The discussions contained under the sections of this prospectus entitled *Prospectus Summary*, *Industry Trends*, *Business* and *The International Drybulk and Container Shipping Industry* have been reviewed by Maritime Strategies International Ltd. (MSI), which has confirmed to us that they accurately describe the international drybulk and container shipping industry, subject to the reliability of the data supporting the statistical and graphical information presented in this prospectus.

The statistical and graphical information we use in this prospectus has been compiled by MSI from its database. MSI compiles and publishes data for the benefit of its clients. Its methodologies for collecting data, and therefore the data collected, may differ from those of other sources, and its data does not reflect all or even necessarily a comprehensive set of the actual transactions occurring in the market.

CURRENCY TRANSLATION

All references in this prospectus to “Dollars” or “\$” are to the lawful currency of the United States of America and all references to “Euros” or “€” are to the single currency introduced on January 1, 1999 by those member states of the European Union who participate in the European Economic and Monetary Union. For the convenience of the reader, this prospectus contains translations of certain amounts from Euros into Dollars. Unless otherwise indicated, prior to September 30, 2006, such amounts are based on the U.S. Dollar exchange in effect at such time and, following September 30, 2006, such amounts are based on a U.S. Dollar exchange rate of €1.00 = U.S.\$1.308 as in effect on December 18, 2006.

PROSPECTUS SUMMARY

This section summarizes some of the information and consolidated financial statements that appear later in this prospectus. As an investor or prospective investor, you should review carefully the risk factors and the more detailed information and financial statements that appear later in this prospectus. In this prospectus, references to Euroseas, Company, we, our, ours and us refer to Euroseas Ltd., and its subsidiaries, unless otherwise stated or the context requires.

We use the term deadweight tons, or dwt, in describing the capacity of our drybulk carriers. Dwt, expressed in metric tons, each of which is equivalent to 1,000 kilograms, refers to the maximum weight of cargo and supplies that a vessel can carry. We use the term twenty foot equivalent unit, or teu, the international standard measure of containers, in describing the capacity of our container ships. For the definition of certain shipping terms used in this prospectus, see the Glossary of Shipping Terms on page 121 of this prospectus. Drybulk carriers are categorized as Capesize, Panamax, Handymax and Handysize. The carrying capacity of a Capesize drybulk carrier is 80,000 dwt and above. The carrying capacity of a Panamax drybulk carrier ranges from 60,000 to 79,999 dwt. The carrying capacity of a Handymax drybulk carrier ranges from 40,000 to 59,999 dwt and that of a Handysize drybulk carrier ranges from 10,000 to 39,999 dwt. Container ships are categorized as Deep Sea, Intermediate, Handysize and Feeder. The carrying capacity of a Deep Sea container ship is 3,000 teu and above. The carrying capacity of an Intermediate container ship ranges from 2,000 to 2,999 teu. The carrying capacity of a Handysize container ship ranges from 1,300 to 1,999 teu and that of a Feeder container ship is less than 1,300 teu. Unless otherwise indicated, all references to currency amounts in this prospectus are in U.S. dollars and all share numbers and per share data give effect to a 1-for-3 reverse stock split effected on October 6, 2006.

Our Company

We are a Marshall Islands company incorporated in May 2005. We are a provider of worldwide ocean-going transportation services. We own and operate drybulk carriers that transport major bulks such as iron ore, coal and grains, and minor bulks such as bauxite, phosphate and fertilizers. We also own and operate container ships and multipurpose vessels that transport dry and refrigerated containerized cargoes, mainly including manufactured products and perishables.

As of December 31, 2006, our fleet consisted of nine vessels, including two Panamax drybulk carriers, two Handysize drybulk carriers, four container ships and one multipurpose vessel. The total cargo carrying capacity of our four drybulk carriers and our four container ships is 207,464 dwt and 6,235 teu, respectively. Our multipurpose vessel can carry 22,568 dwt or 950 teu, or a combination thereof.

We intend to strategically employ our fleet with period and spot charters. We actively pursue period charters to obtain adequate cash flow to cover our fleet's fixed costs, consisting of vessel operating expenses, management fees, general and administrative expenses, interest expense and drydocking costs for the upcoming 12-month period. We look to employ the remainder of our fleet through period charters, spot charters, shipping pools or contracts of affreightment depending on our view of the direction of the markets and other tactical or strategic considerations. Six of the nine vessels in our fleet are currently employed under period charters and one participates in a shipping pool which provide us with both stable cash flow and high utilization rates that help us generate steady earnings and enhance our ability to pay dividends to our shareholders. We believe this balanced employment strategy provides us with more predictable operating cash flows and sufficient downside protection, while allowing us to participate in the potential upside of the spot market during periods of rising charter rates.

During the fiscal year ended December 31, 2005 and the nine month period ended September 30, 2006:

-

We had a fleet utilization of 98.5% and 98.7%, respectively;

-

We generated voyage revenues of \$44.5 million and \$29.7 million, respectively;

-

Our net income was \$25.2 million and \$15.3 million, respectively; and

-

Our Adjusted EBITDA was \$30.4 million and \$21.5 million, respectively.

Our operations generate significant cash flow, which provides us with flexibility in our growth, operating and financial strategy. Since August 2005, we have declared and paid dividends in a total amount of \$1.18 per common share. On January 8, 2007, we declared our sixth consecutive dividend on our common stock in the amount of \$0.22 per share, a 4.8% increase over our prior quarter's dividend of \$0.21 per share and a \$0.04 or 22% increase from the prior year's fourth quarter dividend of \$0.18 per share. We believe we will generate sufficient cash flow from operations to enable us to pay at least the full amount of our current quarterly dividend of \$0.22 for each quarter through December 31, 2007.

Our Fleet

Since August 2005, as part of our fleet growth and renewal strategy, we purchased four vessels with an average age of approximately 15 years for an aggregate purchase price of approximately \$82.5 million. During the same period of time, we sold two of our oldest drybulk carriers with an average age of 25 years, thus significantly reducing the average age of our fleet. We sold these two drybulk carriers for an aggregate sales price of approximately \$9.6 million, realizing a net gain of approximately \$4.4 million. In continuation of our fleet renewal strategy we have also signed a memorandum of agreement to sell our oldest vessel m/v *Ariel* for \$5.4 million, realizing a net gain of \$3.4 million. The m/v *Ariel* is expected to be delivered to the buyers on or about February 15, 2007 after which the average age of our fleet will be approximately 17 years.

Our objective is to expand our fleet with selective acquisitions of cargo carrying vessels while enhancing return on invested capital. The last vessel we acquired was a 1,599 teu, 1993-built handysize container ship, m/v *YM Xingang I*. The vessel was purchased with a charter to Yang Ming at a gross charter rate of \$26,650 per day. The charter will expire between July 2009 and September 2009. We took delivery of this container ship on November 15, 2006. We paid a portion of the purchase price for this vessel with \$20.0 million under a new credit facility and the remainder in cash. We expect to repay \$7.0 million of the debt under this new credit facility with a portion of the proceeds from this offering.

As of January 26, 2007, the profile and employment of our fleet was the following:

Vessel Name	Type	Size		Year Built	Employment	Charter Rate (\$ per day) (*)
		DWT	TEU			
Drybulk Carriers						
ARISTIDES N.P.	Panamax	69,268		1993	Period Charter until Jan. 2008	\$29,000
IRINI	Panamax	69,734		1988	Baumarine Pool until Dec. 2008	\$17,000 to \$20,000 (**)
NIKOLAOS P.	Handysize	34,750		1984	Spot Charter until Jan. 2007	\$18,500
ARIEL (***)	Handysize	33,712		1977	Spot Charter until Jan. 2007	\$16,500
Total Drybulk Carriers	4	207,464				
Container Ships						
YM XINGANG I	Handysize	23,596	1,599	1993	Period Charter until July 2009	\$26,650

KUO HSIUNG	Feeder	18,154	1,269	1993	Period Charter until Nov. 2007	\$12,000
YM QINGDAO I	Feeder	18,253	1,269	1990	Period Charter until Mar. 2007	\$11,900

Total Multipurpose Vessels	1	22,568	950			
TOTAL FLEET	9	319,728	7,185			

(*)

Represents gross charter rates.

(**)

Our subsidiary that owns m/v *Irini*, participates in three short funds (contracts of affreightment to carry cargo) that provide an effective coverage of 77% in 2007 and 42% in 2008. The combination of the short funds and shipping pool employment secures the stated rate for the respective percentages for each year. For the remaining portion of 2007 and 2008, the vessel will effectively earn the spot rate through its employment in the shipping pool. See “Business Our Fleet” for more information.

(***)

The m/v *Ariel* has been contracted for sale with delivery expected to take place on or about February 15, 2007.

Management of Our Fleet

The operations of our vessels are managed by Eurobulk Ltd., or Eurobulk, an affiliated company, under a master management agreement with us and separate management agreements with each ship-owning company. Eurobulk was founded in 1994 by members of the Pittas family and is a reputable ship management company with strong industry relationships and experience in managing vessels. Under our master management agreement, Eurobulk is responsible for providing us with executive services and commercial management services, which include obtaining employment for our vessels and managing our relationships with charterers. Eurobulk also performs technical management services, which include managing day-to-day vessel operations, performing general vessel maintenance, ensuring regulatory and classification society compliance, supervising the maintenance and general efficiency of vessels, arranging our hire of qualified officers and crew, arranging and supervising drydocking and repairs, arranging insurance for vessels, purchasing stores, supplies, spares and new equipment for vessels, appointing supervisors and technical consultants and providing technical support and shoreside personnel who carry out the management functions described above and certain accounting services.

Our Competitive Strengths

We believe that we possess the following competitive strengths:

-

Experienced Management Team. Our management team has significant experience in all aspects of commercial, technical, operational and financial areas of our business. Aristides J. Pittas, our Chairman and Chief Executive Officer, holds a dual graduate degree in Naval Architecture and Marine Engineering and Ocean Systems Management from the Massachusetts Institute of Technology. He has worked in various technical, shipyard and ship management capacities and since 1991 has focused on the ownership and operation of vessels carrying dry cargoes. Dr. Anastasios Aslidis, our Chief Financial Officer, holds a Ph.D. in Ocean Systems Management also from Massachusetts Institute of Technology and has over 19 years of experience, primarily as a partner at a Boston based international consulting firm focusing on investment and risk management in the maritime industry.

-

Cost Effective Vessel Operations. We believe that because of the efficiencies afforded to us through Eurobulk, the strength of our management team and the quality of our fleet, we are, and will continue to be, a reliable, low cost vessel operator, without compromising our high standards of performance, reliability and safety. Despite the average age of our fleet being approximately 18.5 years, our total vessel operating expenses, including management fees and general and administrative expenses were \$4,632 per day for the nine month period ended September 30, 2006. We consider this amount to be among the lowest of the publicly listed drybulk shipping companies in the U.S. Our technical and operating expertise allows us to efficiently manage and transport a wide range of cargoes with a flexible trade route profile, which helps reduce ballast time between voyages and minimize off-hire days. Our professional, well-trained masters, officers and on board crews further help us to control costs and ensure consistent vessel operating performance. We actively manage our fleet and strive to maximize utilization and minimize maintenance expenditures. For the nine month period ended September 30, 2006, our fleet utilization was 98.7% and since 2002 our utilization rate has averaged in excess of 99.0%.

-

Strong Relationships with Customers and Financial Institutions. We believe Eurobulk and the Pittas family have developed strong industry relationships and have gained acceptance with charterers, lenders and insurers because of their long-standing reputation for safe and reliable service and financial responsibility through various shipping cycles. Through Eurobulk, we offer reliable service and cargo carrying flexibility that enables us to attract customers

and obtain repeat business. We also believe that the established customer base and reputation of Eurobulk and the Pittas family helps us to secure favorable employment for our vessels with well known charterers.

Our Business Strategy

Our business strategy is focused on providing consistent shareholder returns by carefully timing and structuring acquisitions of drybulk carriers and container ships and by reliably, safely and competitively operating our vessels through Eurobulk. We continuously evaluate purchase and sale opportunities, as well as long term employment opportunities for our vessels. Additionally, with the proceeds from this offering, we plan to expand our fleet to increase our revenues and earnings and make our drybulk carrier and container ship fleet more cost efficient and attractive to our customers. We believe the following describe our business strategy:

- *Renew and Expand our Fleet.* We expect to grow our fleet in a disciplined manner through timely and selective acquisitions of quality vessels. We perform in-depth technical review and financial analysis of each potential acquisition and only purchase vessels as market conditions and developments present themselves. We will be initially focused on purchasing well-maintained, secondhand vessels, which should provide a significant value proposition given the strong charter rates that exist currently. However, we will also consider purchasing younger vessels or newbuildings if the value proposition exists at the time. Furthermore, as part of our fleet renewal, we will continue to sell certain vessels when we believe it is in the best interests of the Company and our shareholders.

- *Maintain Balanced Employment.* We intend to strategically employ our fleet between period and spot charters. We actively pursue period charters to obtain adequate cash flow to cover our fleet's fixed costs, consisting of vessel operating expenses, management fees, general and administrative expenses, interest expense and drydocking costs for the upcoming 12-month period. We look to deploy the remainder of our fleet through period charters, spot charters, shipping pools or contracts of affreightment depending on our view of the direction of the markets and other tactical or strategic considerations. We believe this balanced employment strategy will provide us with more predictable operating cash flows and sufficient downside protection, while allowing us to participate in the potential upside of the spot market during periods of rising charter rates. On the basis of our existing contracts, our current period charter coverage for 2007 (assuming m/v *Ariel* is sold on February 15, 2007) is 75% and for 2008 is 42%, which will help protect us from market fluctuations, enable us to make significant principal and interest payments on our debt and pay dividends to our shareholders.

- *Operate a Fleet in Two Sectors.* While remaining focused on the dry cargo segment of the shipping industry, we intend to continue to develop a diversified fleet of drybulk carriers and container ships of up to Panamax size. A diversified drybulk fleet profile will allow us to better serve our customers in both major and minor bulk trades, as well as to reduce any dependency on any one cargo, trade route or customer. We will remain focused on the smaller size ship segment of the container market, which has not experienced the same level of expansion in vessel supply that has occurred with larger container ships. A diversified fleet, in addition to enhancing the stability of our cash flows, will also help us to reduce our exposure to unfavorable developments in any one shipping sector and to benefit from upswings in any one shipping sector experiencing rising charter rates.

- *Optimize Use of Financial Leverage.* We will use bank debt to partly fund our vessel acquisitions and increase financial returns for our shareholders. We actively assess the level of debt we incur in light of our ability to repay that debt based on the level of cash flow generated from our balanced chartering strategy and efficient operating cost structure. Our debt repayment schedule as of December 31, 2006 calls for a reduction of more than 40% of our then outstanding debt by the end of 2008. We expect this will increase our ability to borrow funds to make additional

vessel acquisitions in order to grow our fleet and pay consistent and possibly higher dividends to our shareholders.

Industry Trends

The maritime shipping industry is fundamental to international trade with ocean-going vessels representing the most efficient and often the only method of transporting large volumes of many essential drybulk commodities, finished goods as well as crude oil and refined petroleum products between the continents and across the seas. It is a global industry whose performance is closely tied to the level of economic activity in the world.

Drybulk Shipping Industry

Drybulk cargoes are used in many basic industries and in construction, and can be divided into major bulk commodities and minor bulk commodities. Major bulks consist of iron ore, coal and grains. Minor bulks cover a wide variety of commodities, such as forest products, iron and steel products, fertilizers, agricultural products, non-ferrous ores, minerals and petcoke, cement, other construction materials and salt. Grains include wheat, coarse grains and soybeans.

According to Maritime Strategies International Ltd., or MSI, since the fourth quarter of 2002, the drybulk shipping industry has experienced the highest charter rates and vessel values in its modern history due to the favorable imbalance between the supply of drybulk carriers and demand for drybulk transportation. However after reaching a peak in mid-2005, both charter rates and vessel values decreased through mid-2005 before another peak in October to November of that year. Subsequently they trended lower before recovering significantly in August 2006.

For drybulk shipping, factors that affect the supply of drybulk carriers and demand for transportation of drybulk cargo include:

Supply:

-

Shipyards where new ships are constructed are fully booked through 2008, limiting the number of new drybulk carriers that will enter the market in coming years. In 2006 the drybulk fleet was estimated to increase by 7% while in 2007 and 2008, it is expected to increase by 5% and 4.4%, respectively (assuming a low scrapping rate of 1% for those three years); and

-

Port congestion worldwide as a result of increased shipping activity and the implementation of stringent security measures has increased the number of days vessels are waiting to load or discharge their cargo, effectively reducing the supply of drybulk carriers that are available for hire at any particular time.

Demand:

-

In general, the effects of the expansion of world trade and increasing global production and consumption have driven the strong demand for ships; and

-

China and India have helped drive demand for drybulk carriers as they continue to expand iron ore imports and steel production, become net importers of coal, and increase their grain inventories.

Container Shipping Industry

The container shipping industry is responsible for the movement of a wide range of goods from one part of the world to another in a unitized form by performing regular port calls. It represents an important and increasingly significant part of the global seaborne movement of finished goods and perishables. The performance of the container shipping industry is closely tied to the level of worldwide economic trade.

According to MSI, the container shipping industry had been on an upward trend from early 2002 through early 2005, bolstered by relatively rapid increases in demand. However, from mid-2005 into 2006, container freight rates out of Asia, and to Europe in particular, saw some downward movement.

For container shipping, recent developments in factors that affect the supply of container vessels and demand for transportation of containers include:

Supply:

-

Overall container ship capacity expanded at an annual average of 10% in the period 2003-2005. As of December 1, 2006, scheduled deliveries through the end of 2008 for large container ships (3,000 + teu) represented 43% of the existing fleet, while intermediate, handysize and feeder (500-2,999 teu) container ships represented 24% of the existing fleet; and

-

The greatest portion of the capacity growth has been and is expected to be provided by the large container ship sectors of the fleet operating in the transpacific and Europe to Far East routes. Capacity growth in intermediate and feeder container ships that operate in separate intermediate and intra-regional container trades has and is expected to be more restrained.

Demand:

•

In the last three years demand for container shipping has accelerated strongly. Estimated global container trade increased at a compound average annual growth rate of 12% in the period 2003-2005. This growth has been relatively rapid in comparison with other major shipping sectors, such as tankers and bulk carriers; and

•

In recent years, container volumes to, from and within Asia have driven most of the increase in container trade largely influenced by the growth of the Chinese economy. Other recent growth areas include trade out of Brazil, as well as trade in and out of Russia and the Baltic.

We cannot offer assurances as to charter rates or vessel values in any period or that the industry trends described above will continue following the completion of this offering.

Our Corporate History

The Pittas family, the principal owners of Eurobulk and the largest shareholder of Friends Investment Company Inc., or Friends, our largest shareholder, has operated vessels over the past 136 years. The vessels have been operated through various partnerships and different entities over these years. The Company's roots go back four generations to the 19th century when the first Pittas shipowner was Nikolaos F. Pittas. The first Pittas family shore office centralizing ship management was established by Nikolaos' younger son, Aristides, in 1926. Before the onset of World War II, the second generation of the Pittas family had acquired and disposed of a total of at least six vessels. In 1960, the sons of Aristides, Nikolaos and John, set up an office in London together with the Caroussis family. By the early 1990s, they had acquired, traded and sold 14 vessels. In late 1991, John Pittas' sons, Aristides, our Chief Executive Officer, and Nikos, together with their cousin Aristides P. Pittas, joined forces with Petros Pappas of Oceanbulk Maritime S.A., or Oceanbulk, and decided to gradually shift the Pittas family interests to Piraeus, Greece. This was the beginning of the active involvement of the fourth Pittas generation in shipping. From 1991, when the Pittas family joined Oceanbulk, to 1994, Oceanbulk dramatically expanded from a fleet of five vessels to a fleet of up to 15 vessels.

At the end of 1994, Aristides and Nikos Pittas, together with their brother Manolis Pittas, decided to separate the Pittas family interests from Oceanbulk and formed Eurobulk to continue the Pittas family presence in shipping. In June 2005, the Pittas family owned the majority of the shares in seven vessels and on June 28, 2005, the shareholders of these vessels transferred their shares in each of the vessel-owning companies in exchange for shares in Friends. On June 29, 2006, Friends exchanged all of the shares in the vessel-owning companies for shares in Euroseas, thus becoming the 100% owner of Euroseas at that time. Since the beginning of the Pittas family's involvement in shipping, they have owned and operated approximately 40 vessels. Since the inception of Eurobulk in 1995, all vessel acquisitions have been profitable and the group's results, on a consolidated basis, have been profitable for each of the last five years.

Formation of Euroseas Ltd.

Euroseas Ltd. was organized in May 2005 in the Marshall Islands to consolidate the ownership of the seven vessel-owning companies referred to above. On August 25, 2005, we raised a net amount of approximately \$17.5 million from a private placement transaction in which we issued securities to a number of institutional and accredited investors (the Private Placement). In the Private Placement, we issued 2,342,331 shares of common stock at a price of \$9.00 per share, as well as warrants to purchase 585,581 shares of common stock at an exercise price of \$10.80 per share. At the same time, a subsidiary of ours executed a merger agreement with Cove Apparel, Inc., or Cove, a public shell company. The merger of our subsidiary with Cove was consummated on March 27, 2006. At no time did

Euroseas Ltd., the parent company, merge with or into Cove.

On May 5, 2006, our common stock began trading on the OTCBB under the symbol ESEAF.OB. On October 6, 2006, we effected a 1-for-3 reverse stock split in order to increase our share price to satisfy the price per share listing requirements of the NASDAQ Global Market and our symbol was changed to EUSEF.OB. We have made application to have our shares listed on the NASDAQ Global Market upon completion of this offering.

Our executive offices are located at 40 Ag. Konstantinou Street, 151 24, Maroussi, Greece. Our telephone number is 011 30 211 1804005. The primary residence of our Chief Financial Officer, Dr. Anastasios Aslidis, is in the United States.

The Offering

Common stock offered by us	5,000,000 shares
Underwriters over-allotment option	Up to 750,000 shares
Common stock outstanding after this offering ⁽¹⁾	17,620,114 shares
Use of proceeds	<p>We estimate that we will receive net proceeds of approximately \$38.5 million from this offering assuming an offering price of \$8.50 per share of common stock, after deducting underwriting discounts and commissions, offering expenses and the financial advisory fee payable to Cantor Fitzgerald and Co., and assuming the underwriters over-allotment option is not exercised. We intend to use approximately \$7.0 million of the net proceeds to repay a portion of the debt that was used to acquire m/v <i>YM Xingang I</i>, with the remaining proceeds being used to acquire additional vessels. Any amounts not so used will be applied to general corporate purposes.</p>
Current OTCBB symbol listing	EUSEF.OB
Proposed NASDAQ Global Market symbol	ESEA
Current dividend rate	<p>\$0.22 per share on a quarterly basis. We expect to declare our next dividend in May 2007, subject to the approval of our Board of Directors.</p> <p>On January 8, 2007, we declared our quarterly dividend for the quarter ended December 31, 2006 in the amount of \$0.22 per share. The record date of our dividend attributable to the fourth quarter 2006 is expected to be January 29, 2007 and it will precede the closing of this offering. Accordingly, you will not be entitled to receive a dividend attributable to the fourth quarter 2006. We believe we will generate sufficient cash flow from operations to enable us to pay at least the full amount of the current quarterly dividend of \$0.22 on all shares for each quarter through December 31, 2007, or \$0.88 per share on an annualized basis.</p>

Risk factors

Investing in our common stock involves substantial risk. You should carefully consider all the information in this prospectus prior to investing in our common stock. In particular, we urge you to consider carefully the factors set forth in the section of this prospectus entitled **Risk Factors** beginning on page 12. Some of these risk factors relate principally to the industry in which we operate and our business in general. Other risks relate to the securities market for and ownership of our common stock. Any of these risk factors could significantly and negatively affect our business, financial condition, operating results and common stock price.

(1)

The number of shares of common stock outstanding after this offering excludes the following:

-

600,000 shares of common stock reserved for issuance upon the exercise of stock options or other stock awards that may be granted under our stock incentive plan;

-

585,581 shares of common stock reserved for issuance upon the exercise of outstanding warrants, with an exercise price of \$10.80 per share; and

-

750,000 shares that may be issued pursuant to the underwriters' over-allotment option.

Summary Financial Information and Data

The following summary financial information and data were derived from our audited financial statements for the years ended December 31, 2003, 2004 and 2005, and our unaudited financial statements for the nine months ended September 30, 2005 and 2006 included elsewhere in this prospectus or previously filed with the Securities and Exchange Commission. The information is only a summary and should be read in conjunction with our historical financial statements and related notes included in this prospectus and the section of this prospectus entitled Management's Discussion and Analysis of Financial Condition and Results of Operations. The historical data included below and elsewhere in this prospectus are not necessarily indicative of our future performance.

(1)

In 2004, the estimated scrap value of the vessels was increased from \$170 to \$300 per lightweight ton to better reflect market price developments in the scrap metal market. The effect of this change in estimate was to reduce 2004 depreciation expense by \$1,400,010 and increase 2004 net income by the same amount. The m/v *Widar* was sold in April 2004. Depreciation expenses for the m/v *Widar* for 2004 amounted to \$136,384 compared to \$409,149 for 2003. The m/v *Pantelis P* was sold in May 2006. Depreciation expenses for the m/v *Pantelis P* for the nine month period ended September 30, 2006 amounted to \$107,587 compared to \$193,656 in the same period in 2005. The m/v *John P* was sold in July 2006. Depreciation expenses for the m/v *John P* for the nine month period ended September 30, 2006 amounted to \$60,697 (the vessel was classified as an asset held for sale after March 31, 2006) compared to \$182,093 in the same period in 2005.

(2)

We consider Adjusted EBITDA to represent net earnings before interest, taxes, depreciation and amortization including the amortization of deferred revenue from below market period charters when we acquired m/v *Tasman Trader* and m/v *Aristides N.P.* Adjusted EBITDA does not represent and should not be considered as an alternative to net income or cash flow from operations, as determined by United States generally accepted accounting principles, or

U.S. GAAP, and our calculation of Adjusted EBITDA may not be comparable to that reported by other companies. Adjusted EBITDA is included herein because it is a basis upon which we assess our liquidity position and because we believe that it presents useful information to investors regarding a company's ability to service and/or incur indebtedness. The Company's definition of Adjusted EBITDA may not be the same as that used by other companies in the shipping or other industries.

Adjusted EBITDA Reconciliation to Net Income:

	2003	Year Ended December 31, 2004	2005	Nine-Months Ended September 30, 2005	2006
Net income	\$ 8,426,612	\$ 30,611,765	\$ 25,178,454	\$ 20,456,976	\$ 15,322,420

Adjusted EBITDA	\$ 13,941,418	\$ 34,594,658	\$ 30,422,120	\$ 24,123,886	\$ 21,480,772

(3)

The dividend amounts for 2005 and, for the nine months ended September 30, 2005, reflect aggregate dividends of \$30,175,223 and \$27,525,000, respectively, and a return of capital in the amount of \$16,700,000. The total payment to shareholders made in 2005 is in excess of previously retained earnings because the Company decided to distribute to its original shareholders in advance of going public most of the profits relating to the Company's operations up to that time and to recapitalize the Company. This one-time dividend should not be considered indicative of future dividend payments and the Company refers you to the other sections in this prospectus for further information on the Company's dividend policy. The dividends declared for 2003 and 2004 include a \$76,000 and \$22,856 non-cash dividend from minority interest holdings. Cash paid for dividends/return of capital in 2004 includes a \$1,549,855 return of capital due to the sale of m/v *Widar*.

(4)

The average TCE rate calculation shown above is based on the actual number of available and voyage days. In the above table, the number of available voyage days was rounded to the nearest number of full days.

FORWARD-LOOKING STATEMENTS

This prospectus contains forward-looking statements. These forward-looking statements include information about possible or assumed future results of our operations or our performance. Words such as expects, intends, plans, believes, anticipates, estimates, and variations of such words and similar expressions are intended to identify the forward-looking statements. Although we believe that the expectations reflected in such forward-looking statements are reasonable, no assurance can be given that such expectations will prove to have been correct. These statements involve known and unknown risks and are based upon a number of assumptions and estimates which are inherently subject to significant uncertainties and contingencies, many of which are beyond our control. Actual results may differ materially from those expressed or implied by such forward-looking statements. Forward-looking statements include, but are not limited to, statements regarding:

- our future operating or financial results;
- future, pending or recent acquisitions, business strategy, areas of possible expansion, and expected capital spending or operating expenses;
- drybulk and container shipping industry trends, including charter rates and factors affecting vessel supply and demand;
- our financial condition and liquidity, including our ability to obtain additional financing in the future to fund capital expenditures, acquisitions and other general corporate activities;
- availability of crew, number of off-hire days, drydocking requirements and insurance costs;
- our expectations about the availability of vessels to purchase or the useful lives of our vessels;
- our expectations relating to dividend payments and our ability to make such payments;
- our ability to leverage to our advantage our manager's relationships and reputations in the drybulk and container shipping industry;
- changes in seaborne and other transportation patterns;

- changes in governmental rules and regulations or actions taken by regulatory authorities;
- potential liability from future litigation;
- global and regional political conditions;
- acts of terrorism and other hostilities; and
- other factors discussed in the section titled Risk Factors.

We undertake no obligation to publicly update or revise any forward-looking statements contained in this prospectus, or the documents to which we refer you in this prospectus, to reflect any change in our expectations with respect to such statements or any change in events, conditions or circumstances on which any statement is based.

RISK FACTORS

Any investment in our common stock involves a high degree of risk. You should consider carefully the following factors, as well as the other information set forth in this prospectus, before making an investment in our common stock. Some of the following risks relate principally to the industry in which we operate and our business in general. Other risks relate to the securities market for and ownership of our common stock. Any of the described risks could significantly and negatively affect our business, financial condition, operating results and price of our common stock. The following risk factors describe the material risks that are presently known to us.

Industry Risk Factors

The cyclical nature of the shipping industry may lead to volatile changes in freight rates which may reduce our revenues and net income.

We are an independent shipping company that operates in the drybulk and container shipping industry. Our profitability is dependent upon the freight rates we are able to charge. The supply of and demand for shipping capacity strongly influences freight rates. The demand for shipping capacity is determined primarily by the demand for the type of commodities carried and the distance that those commodities must be moved by sea. The demand for commodities is affected by, among other things, world and regional economic and political conditions (including developments in international trade, fluctuations in industrial and agricultural production and armed conflicts), environmental concerns, weather patterns, and changes in seaborne and other transportation costs. The size of the existing fleet in a particular market, the number of new vessel deliveries, the scrapping of older vessels and the number of vessels out of active service (i.e., laid-up, drydocked, awaiting repairs or otherwise not available for hire), determines the supply of shipping capacity, which is measured by the amount of suitable tonnage available to carry cargo. The cyclical nature of the shipping industry may lead to volatile changes in freight rates which may reduce our revenues and net income.

In addition to the prevailing and anticipated freight rates, factors that affect the rate of newbuilding, scrapping and laying-up include newbuilding prices, secondhand vessel values in relation to scrap prices, costs of bunkers and other operating costs, costs associated with classification society surveys, normal maintenance and insurance coverage, the efficiency and age profile of the existing fleet in the market and government and industry regulation of maritime transportation practices, particularly environmental protection laws and regulations. These factors influencing the supply of and demand for shipping capacity are outside of our control, and we may not be able to correctly assess the nature, timing and degree of changes in industry conditions. Some of these factors may have a negative impact on our revenues and net income.

The value of our vessels may fluctuate, adversely affecting our earnings, liquidity and causing us to breach our secured credit agreements.

The market value of our vessels can fluctuate significantly. The market value of our vessels may increase or decrease depending on the following factors:

-

general economic and market conditions affecting the shipping industry;

-

supply of drybulk, container and multipurpose vessels;

-

demand for drybulk, container and multipurpose vessels;

-

types and sizes of vessels;

-

other modes of transportation;

-

cost of newbuildings;

-

new regulatory requirements from governments or self-regulated organizations; and

-

prevailing level of charter rates.

As vessels grow older, they generally decline in value. Due to the cyclical nature of the drybulk and container shipping industry, if for any reason we sell vessels at a time when prices have fallen, we could incur a loss and our business, results of operations, cash flow, financial condition and ability to pay dividends could be adversely affected.

In addition, we periodically re-evaluate the carrying amount and period over which long-lived assets are depreciated to determine if events have occurred which would require modification to their carrying values or their useful lives. A determination that a vessel's estimated remaining useful life or market value has declined could result in an impairment charge against our earnings and a reduction in our shareholders' equity. Any change in the assessed value of any of our vessels might also cause a violation of the covenants of each secured credit agreement which in turn might restrict our cash and affect our liquidity. All of our credit agreements provide for a minimum security maintenance ratio. If the assessed value of our vessels declines below certain thresholds, we will be deemed to have violated these covenants and may incur penalties for breach of our credit agreements. For example, these penalties could require us to prepay the shortfall between the assessed value of our vessels and the value such vessels are required to maintain pursuant to the secured credit agreement, or to provide additional security acceptable to the lenders in an amount at least equal to the amount of any shortfall. Further, future loans that we may agree to may include various other covenants, in addition to the vessel-related ones, that may ultimately depend on the assessed values of our vessels. Such covenants include, but are not limited to, maximum fleet leverage covenants and minimum fair net worth covenants.

Although charter rates in the international drybulk and container shipping industry reached historic highs recently, since then rates have fluctuated and future profitability will be dependent on the level of charter rates and commodity prices.

Charter rates for the international drybulk and container shipping industry have reached record highs during the past two years; however, by the beginning of 2006 rates declined and while drybulk rates have recovered since early 2006, container ship rates have remained flat for most of 2006 and further declined by the end of the year. We anticipate that the future demand for our drybulk, container and multipurpose vessels and the charter rates of the corresponding markets will be dependent upon continued economic growth in China, India and the world economy, seasonal and regional changes in demand, and changes to the capacity of the world fleet. The capacity of the world fleet seems likely to increase and economic growth may not continue. Adverse economic, political, social or other developments could also have a material adverse effect on our business and results of operations. If the number of new ships delivered exceeds the number of vessels being scrapped and lost, vessel capacity will increase. For instance, given that as of December 1, 2006 the capacity of the fully cellular worldwide container vessel fleet was approximately 9.3 million teu, with approximately 4.3 million teu of additional capacity on order, the growing supply of container vessels may exceed future demand, particularly in the short term. If the supply of vessel capacity increases but the demand for vessel capacity does not increase correspondingly, charter rates and vessel values could materially decline.

The factors affecting the supply and demand for vessels are outside of our control, and the nature, timing and degree of changes in industry conditions are unpredictable. Some of the factors that influence demand for vessel capacity include:

- supply and demand for drybulk and container ship commodities, and separately for containerized cargo;
- global and regional economic and political conditions;
- the distance drybulk and containerized commodities are to be moved by sea;
- environmental and other regulatory developments;

- currency exchange rates;
- changes in global production and manufacturing distribution patterns of finished goods that utilize drybulk and other containerized commodities; and
- changes in seaborne and other transportation patterns.

Some of the factors that influence the supply of vessel capacity include:

- the number of newbuilding deliveries;
- the scrapping rate of older vessels;
- the price of steel and other materials;
- port congestion;
- changes in environmental and other regulations that may limit the useful life of vessels; and
- the number of vessels that are out of service.

An economic slowdown in the Asia Pacific region could materially reduce the amount and/or profitability of our business.

A significant number of the port calls made by our vessels involve the loading or discharging of raw materials and semi-finished products in ports in the Asia Pacific region. As a result, a negative change in economic conditions in any Asia Pacific country, particularly in China or India, may have an adverse effect on our business, financial position and results of operations, as well as our future prospects. In particular, in recent years, China has been one of the world's fastest growing economies in terms of gross domestic product. Such growth may not be sustained and the Chinese economy may experience contraction in the future. Moreover, any slowdown in the economies of the United States of America, the European Union or certain Asian countries may adversely effect economic growth in China and elsewhere. Our business, financial position and results of operations, as well as our future prospects, will likely be materially and adversely affected by an economic downturn in any of these countries.

We may become dependent on spot charters in the volatile shipping markets, which may result in decreased revenues and/or profitability.

Although most of our vessels are currently under period charters, in the future, we may have more of these vessels and/or any newly acquired vessels on spot charters. The spot market is highly competitive and rates within this market are subject to volatile fluctuations, while period charters provide income at pre-determined rates over more extended periods of time. If we decide to spot charter our vessels, we may not be able to keep all our vessels fully employed in these short-term markets or that future spot rates will be sufficient to enable our vessels to be operated profitably. A significant decrease in charter rates could affect the value of our fleet and could adversely affect our profitability and cash flows with the result that our ability to pay debt service to our lenders and dividends to our shareholders could be impaired.

An over-supply of drybulk carrier and container ship capacity may lead to reductions in charter hire rates and profitability.

The market supply of drybulk carriers and especially container ships has been increasing, and the number of container ships on order have recently reached historic highs. These newbuildings are expected to begin being delivered in significant numbers at the beginning of 2007. An over-supply of drybulk carrier and container ship capacity may result in a reduction of charter hire rates. If such a reduction occurs upon the expiration or termination of our drybulk carriers and container ships current charters, such as during 2007, when the charters under which two of our container ships are currently deployed expire, we may only be able to recharter those drybulk carriers and container ships at reduced or unprofitable rates or we may not be able to charter these vessels at all.

We are subject to regulation and liability under environmental laws that could require significant expenditures and affect our cash flows and net income.

Our business and the operation of our vessels are materially affected by government regulation in the form of international conventions, national, state and local laws and regulations in force in the jurisdictions in which the vessels operate, as well as in the country or countries of their registration. Because such conventions, laws, and regulations are often revised, we may not be able to predict the ultimate cost of complying with such conventions, laws and regulations or the impact thereof on the resale prices or useful lives of our vessels. Additional conventions, laws and regulations may be adopted which could limit our ability to do business or increase the cost of our doing business and which may materially adversely affect our operations. We are required by various governmental and quasi-governmental agencies to obtain certain permits, licenses, certificates and financial assurances with respect to our operations.

The operation of our vessels is affected by the requirements set forth in the International Maritime Organization's (IMO's) International Management Code for the Safe Operation of Ships and Pollution Prevention (ISM Code). The

ISM Code requires shipowners and bareboat charterers to develop and maintain an extensive Safety Management System that includes the adoption of a safety and environmental protection policy setting forth instructions and procedures for safe operation and describing procedures for dealing with emergencies. The failure of a shipowner or bareboat charterer to comply with the ISM Code may subject such party to increased liability, may decrease available insurance coverage for the affected vessels, and/or may result in a denial of access to, or detention in, certain ports. Currently, each of our vessels and Eurobulk, our affiliated ship management company, are ISM Code-certified, but we may not be able to maintain such certification indefinitely.

Although the United States of America is not a party, many countries have ratified and follow the liability scheme adopted by the IMO and set out in the International Convention on Civil Liability for Oil Pollution Damage, 1969, as amended (the CLC), and the Convention for the Establishment of an International Fund for Oil Pollution of 1971, as amended. Under these conventions, a vessel's registered owner is strictly liable for pollution damage caused on the territorial waters of a contracting state by discharge of persistent oil, subject to certain complete defenses. Many of the countries that have ratified the CLC have increased the liability limits through a 1992 Protocol to the CLC. The right to limit liability is also forfeited under the CLC where the spill is caused by the owner's actual fault or privity and, under the 1992 Protocol, where the spill is caused by the owner's intentional or reckless conduct. Vessels trading to contracting states must provide evidence of insurance covering the limited liability of the owner. In jurisdictions where the CLC has not been adopted, various legislative schemes or common law govern, and liability is imposed either on the basis of fault or in a manner similar to the CLC.

The United States Oil Pollution Act of 1990 (OPA) established an extensive regulatory and liability regime for the protection and clean-up of the environment from oil spills. OPA affects all owners and operators whose vessels trade in the United States of America or any of its territories and possessions or whose vessels operate in waters of the United States of America, which includes the territorial sea of the United States of America and its 200 nautical mile exclusive economic zone. OPA allows for potentially unlimited liability without regard to fault of vessel owners, operators and bareboat charterers for all containment and clean-up costs and other damages arising from discharges or threatened discharges of oil from their vessels, including bunkers (fuel), in the U.S. waters. OPA also expressly permits individual states to impose their own liability regimes with regard to hazardous materials and oil pollution materials occurring within their boundaries.

While we do not carry oil as cargo, we do carry fuel oil (bunkers) in our drybulk carriers. We currently maintain, for each of our vessels, pollution liability coverage insurance of \$1 billion per incident. If the damages from a catastrophic spill exceeded our insurance coverage, that would have a material adverse affect on our financial condition.

Capital expenditures and other costs necessary to operate and maintain our vessels may increase due to changes in governmental regulations, safety or other equipment standards.

Changes in governmental regulations, safety or other equipment standards, as well as compliance with standards imposed by maritime self-regulatory organizations and customer requirements or competition, may require us to make additional expenditures. In order to satisfy these requirements, we may, from time to time, be required to take our vessels out of service for extended periods of time, with corresponding losses of revenues. In the future, market conditions may not justify these expenditures or enable us to operate some or all of our vessels profitably during the remainder of their economic lives.

Increased inspection procedures and tighter import and export controls could increase costs and disrupt our business.

International shipping is subject to various security and customs inspection and related procedures in countries of origin and destination. Inspection procedures may result in the seizure of contents of our vessels, delays in the loading, offloading or delivery and the levying of customs duties, fines or other penalties against us.

It is possible that changes to inspection procedures could impose additional financial and legal obligations on us. Furthermore, changes to inspection procedures could also impose additional costs and obligations on our customers and may, in certain cases, render the shipment of certain types of cargo uneconomical or impractical. Any such changes or developments may have a material adverse effect on our business, financial condition and results of operations.

Rising fuel prices may adversely affect our profits.

Fuel (bunkers) is a significant, if not the largest, operating expense for many of our shipping operations when our vessels are under voyage charter. When a vessel is operating under a time charter, these costs are paid by the charterer. However fuel costs are taken into account by the charterer in determining the amount of time charter hire and therefore fuel costs also indirectly affect time charters. The price and supply of fuel is unpredictable and fluctuates based on events outside our control, including geopolitical developments, supply and demand for oil and gas, actions by OPEC and other oil and gas producers, war and unrest in oil producing countries and regions, regional production patterns and environmental concerns. Fuel prices have been at historically high levels recently, but shipowners have not really felt

the effect of these high prices because the shipping markets have also been at high levels. Any increase in the price of fuel may adversely affect our profitability. Further, fuel may become much more expensive in future, which may reduce the profitability and competitiveness of our business versus other forms of transportation, such as truck or rail.

If our vessels fail to maintain their class certification and/or fail any annual survey, intermediate survey, drydocking or special survey, that vessel would be unable to carry cargo, thereby reducing our revenues and profitability and violating certain loan covenants of our third-party indebtedness.

The hull and machinery of every commercial vessel must be classed by a classification society authorized by its country of registry. The classification society certifies that a vessel is safe and seaworthy in accordance with the applicable rules and regulations of the country of registry of the vessel and the Safety of Life at Sea Convention (SOLAS). Our vessels are currently classed with Lloyd's Register of Shipping, Bureau Veritas and Nippon Kaiji Kyokai. ISM and International Ship and Port Facilities Security (ISPS) certification have been awarded by Bureau Veritas and the Panama Maritime Authority to our vessels and Eurobulk.

A vessel must undergo annual surveys, intermediate surveys, drydockings and special surveys. In lieu of a special survey, a vessel's machinery may be on a continuous survey cycle, under which the machinery would be surveyed periodically over a five-year period. Every vessel is also required to be drydocked every two to three years for inspection of the underwater parts of such vessel.

If any vessel does not maintain its class and/or fails any annual survey, intermediate survey, drydocking or special survey, the vessel will be unable to carry cargo between ports and will be unemployable and uninsurable which could cause us to be in violation of certain covenants in our loan agreements. Any such inability to carry cargo or be employed, or any such violation of covenants, could have a material adverse impact on our financial condition and results of operations. That status could cause us to be in violation of certain covenants in our loan agreements.

Maritime claimants could arrest our vessels, which could interrupt our cash flow.

Crew members, suppliers of goods and services to a vessel, shippers of cargo and other parties may be entitled to a maritime lien against that vessel for unsatisfied debts, claims or damages. In many jurisdictions, a maritime lienholder may enforce its lien by arresting a vessel through foreclosure proceedings. The arresting or attachment of one or more of our vessels could interrupt our cash flow and require us to pay large sums of funds to have the arrest lifted which would have a material adverse effect on our financial condition and results of operations.

In addition, in some jurisdictions, such as South Africa, under the sister ship theory of liability, a claimant may arrest both the vessel which is subject to the claimant's maritime lien and any associated vessel, which is any vessel owned or controlled by the same owner. Claimants could try to assert sister ship liability against one of our vessels for claims relating to another of our vessels.

Governments could requisition our vessels during a period of war or emergency, resulting in loss of earnings.

A government could requisition for title or seize our vessels. Requisition for title occurs when a government takes control of a vessel and becomes the owner. Also, a government could requisition our vessels for hire. Requisition for hire occurs when a government takes control of a vessel and effectively becomes the charterer at dictated charter rates. Generally, requisitions occur during a period of war or emergency. Government requisition of one or more of our vessels could have a material adverse effect on our financial condition and results of operations.

World events outside our control may negatively affect our ability to operate, thereby reducing our revenues and net income or our ability to obtain additional financing, thereby restricting the implementation of our business strategy.

Terrorist attacks such as the attacks on the United States of America on September 11, 2001, on London, England on July 7, 2005, and the response to these attacks, as well as the threat of future terrorist attacks, continue to cause uncertainty in the world financial markets and may affect our business, results of operations and financial condition. The continuing conflict in Iraq may lead to additional acts of terrorism and armed conflict around the world, which may contribute to further economic instability in the global financial markets. These uncertainties could also have a material adverse effect on our ability to obtain additional financing on terms acceptable to us or at all.

Terrorist attacks may also negatively affect our operations and financial condition and directly impact its vessels or its customers. Future terrorist attacks could result in increased volatility of the financial markets in the United States of America and globally and could result in an economic recession in the United States of America or the world. Any of these occurrences could have a material adverse impact on our financial condition and costs.

Company Risk Factors

If we cannot use proceeds of this offering to acquire vessels and expand our fleet, we may use the proceeds of this offering for general corporate purposes with which you may not agree.

We intend to use proceeds of this offering to acquire vessels and expand our fleet. Our management will have the discretion to identify and acquire vessels with the proceeds of this offering. If our management is unable to identify and acquire vessels on terms acceptable to us, we may use the proceeds for general corporate purposes that you may not agree with. We will not escrow the proceeds from this offering and will not return the proceeds to you if we do not acquire one or more vessels. It may take a substantial period of time before we can locate and purchase suitable vessels. During this period, the proceeds of this offering may not be invested on a short-term basis and therefore may not yield returns at rates comparable to what a vessel might have earned.

We depend entirely on Eurobulk to manage and charter our fleet, which may adversely affect our operations if Eurobulk fails to perform its obligations.

We have no employees and we currently contract the commercial and technical management of our fleet, including crewing, maintenance and repair, to Eurobulk, our affiliated ship management company. We may lose Eurobulk's services or Eurobulk may fail to perform its obligations to us which could have a material adverse effect on our financial condition and results of our operations. Although we may have rights against Eurobulk if it defaults on its obligations to us, you will have no recourse against Eurobulk. Further, we expect that we will need to seek approval from our lenders to change Eurobulk as our ship manager.

Because Eurobulk is a privately held company, there is little or no publicly available information about it and there may be very little advance warning of operational or financial problems experienced by Eurobulk that may adversely affect us.

The ability of Eurobulk to continue providing services for our benefit will depend in part on its own financial strength. Circumstances beyond our control could impair Eurobulk's financial strength, and because Eurobulk is privately held it is unlikely that information about its financial strength would become public unless Eurobulk began to default on its obligations. As a result, there may be little advance warning of problems affecting Eurobulk, even though these problems could have a material adverse effect on us.

We will continue to be controlled by Friends after this offering, which may limit your ability to influence our actions.

Assuming that the underwriters do not exercise their over-allotment option, Friends, our largest shareholder, will own or control 56.3% of the outstanding shares of our common stock immediately following this offering or 54.0% if the underwriters exercise their over-allotment option in full. As a result of this share ownership and for so long as Friends owns a significant percentage of our outstanding common stock, Friends will be able to influence the outcome of any shareholder vote, including the election of directors, the adoption or amendment of provisions in our articles of incorporation or bylaws and possible mergers, corporate control contests and other significant corporate transactions. This concentration of ownership may have the effect of delaying, deferring or preventing a change in control, merger, consolidation, takeover or other business combination involving us. This concentration of ownership could also discourage a potential acquirer from making a tender offer or otherwise attempting to obtain control of us, which could in turn have an adverse effect on the market price of our common stock.

We will be a controlled company under NASDAQ rules, and as such we are entitled to exemption from certain NASDAQ corporate governance standards, and you may not have the same protections afforded to stockholders of companies that are subject to all of the NASDAQ corporate governance requirements.

After the consummation of this offering, Friends will continue to control a majority of our outstanding voting stock. As a result, we will be a controlled company within the meaning of the NASDAQ corporate governance

standards. Under NASDAQ rules, a company of which more than 50% of its voting power is held by an individual, group or another company is a controlled company and may elect not to comply with certain NASDAQ corporate governance requirements, including (1) the requirement that a majority of the board of directors consist of independent directors and (2) the requirement to maintain independent compensation and nominating committees. Following this offering, we may utilize these exemptions. As a result, non-independent directors, including members of our management who also serve on our board of directors, will, among other things, fix the compensation of our management, make stock and option awards and resolve governance issues regarding our company. Accordingly, in the future you may not have the same protections afforded to stockholders of companies that are subject to all of the NASDAQ corporate governance requirements.

We and our principal officers have affiliations with Eurobulk that could create conflicts of interest detrimental to us.

Our principal officers are also principals, officers and employees of Eurobulk, which is our ship management company. These responsibilities and relationships could create conflicts of interest between us and Eurobulk. Conflicts may also arise in connection with the chartering, purchase, sale and operations of the vessels in our fleet versus other vessels that are or may be managed in the future by Eurobulk. Circumstances in any of these instances may make one decision advantageous to us but detrimental to Eurobulk and vice versa. Eurobulk is expected to manage at least one vessel other than those owned by Euroseas. In the past, Eurobulk has managed other vessels where the Pittas family was a minority shareholder but never any where there was no Pittas family participation at all. However, it is possible that in the future Eurobulk may manage additional vessels which will not belong to Euroseas and in which the Pittas family may have controlling, little or even no power or participation and where such conflicts may arise. Eurobulk may not be able to resolve all conflicts of interest in a manner beneficial to us.

Companies affiliated with Eurobulk or our officers and directors may acquire vessels that compete with our fleet.

Companies affiliated with Eurobulk or our officers and directors own drybulk carriers and may acquire additional drybulk carriers, container ships or multipurpose vessels in the future. These vessels could be in competition with our fleet and other companies affiliated with Eurobulk might be faced with conflicts of interest with respect to their own interests and their obligations to us. Eurobulk, Friends Investment Company Inc. and Aristides J. Pittas, our Chairman and Chief Executive Officer, have granted us a right of first refusal to acquire any drybulk vessel or container ship which any of them may consider for acquisition in the future. In addition, Mr. Pittas will use his best efforts to cause any entity with respect to which he directly or indirectly controls to grant us this right of first refusal. Were we, however, to decline any such opportunity offered to us or we do not have the resources or desire to accept any such opportunity, Eurobulk, Friends and Aristides J. Pittas, and any of their respective Affiliates, could acquire such vessels.

Our officers do not devote all of their time to our business.

Our officers are involved in other business activities that may result in their spending less time than is appropriate or necessary in order to manage our business successfully. Our Chief Executive Officer, Chief Financial Officer and Secretary are not employed directly by us, but rather their services are provided pursuant to our master management agreement with Eurobulk. These officers may spend a material portion of their time providing services to Eurobulk and its affiliates on matters unrelated to us.

We are a holding company, and we depend on the ability of our subsidiaries to distribute funds to us in order to satisfy our financial obligations or to make dividend payments.

We are a holding company and our subsidiaries, which are all wholly-owned by us either directly or indirectly, conduct all of our operations and own all of our operating assets. We have no significant assets other than the equity interests in our wholly-owned subsidiaries. As a result, our ability to make dividend payments to you depends on our

subsidiaries and their ability to distribute funds to us. If we are unable to obtain funds from our subsidiaries, we may be unable or our Board of Directors may exercise its discretion not to pay dividends.

We may not be able to pay dividends.

Subject to the limitations discussed below, we currently intend to pay regular minimum quarterly dividends of \$0.22 per share to holders of our common stock, when, as and if declared by our Board of Directors. However, we

may not earn sufficient charterhire or we may incur expenses or liabilities that would reduce or eliminate the cash available for distribution as dividends. Our loan agreements may also limit the amount of dividends we can pay under some circumstances based on certain covenants included in the loan agreements.

If we are not successful in acquiring additional vessels, any unused net proceeds from this offering may be used for other corporate purposes or held pending investment in other vessels. Identifying and acquiring vessels may take a significant amount of time. The result may be that proceeds of this offering are not invested in additional vessels, or are so invested but only after some delay. In either case, we will not be able to earn charter hire consistent with our current anticipations, and our profitability and our ability to pay dividends will be affected.

In addition, the declaration and payment of dividends will be subject at all times to the discretion of our Board of Directors. The timing and amount of dividends will depend on our earnings, financial condition, cash requirements and availability, restrictions in our loan agreements, growth strategy, charter rates in the drybulk and container shipping industry, the provisions of Marshall Islands law affecting the payment of dividends and other factors. Marshall Islands law generally prohibits the payment of dividends other than from surplus (retained earnings and the excess of consideration received for the sale of shares above the par value of the shares), but if there is no surplus, dividends may be declared out of the net profits (basically, the excess of our revenue over our expenses) for the fiscal year in which the dividend is declared or the preceding fiscal year. Marshall Islands law also prohibits the payment of dividends while a company is insolvent or if it would be rendered insolvent upon the payment of a dividend. As a result, we may not be able to pay dividends.

If we are unable to fund our capital expenditures, we may not be able to continue to operate some of our vessels, which would have a material adverse effect on our business and our ability to pay dividends.

In order to fund our capital expenditures, we may be required to incur borrowings or raise capital through the sale of debt or equity securities. Our ability to access the capital markets through future offerings may be limited by our financial condition at the time of any such offering as well as by adverse market conditions resulting from, among other things, general economic conditions and contingencies and uncertainties that are beyond our control. Our failure to obtain the funds for necessary future capital expenditures would limit our ability to continue to operate some of our vessels and could have a material adverse effect on our business, results of operations and financial condition and our ability to pay dividends. Even if we are successful in obtaining such funds through financings, the terms of such financings could further limit our ability to pay dividends.

If we fail to manage our planned growth properly, we may not be able to successfully expand our market share.

We intend to continue to grow our fleet. Our growth will depend on:

- locating and acquiring suitable vessels;
- identifying and consummating acquisitions or joint ventures;
- integrating any acquired business successfully with our existing operations;
-

enhancing our customer base;

-

managing our expansion; and

-

obtaining required financing on acceptable terms.

During periods in which charter rates are high, vessel values generally are high as well, and it may be difficult to consummate vessel acquisitions at favorable prices. In addition, growing any business by acquisition presents numerous risks, such as undisclosed liabilities and obligations and difficulty experienced in (1) obtaining additional qualified personnel, (2) managing relationships with customers and suppliers, and (3) integrating newly acquired operations into existing infrastructures. We may not be successful in executing our growth plans or that we will not incur significant expenses and losses in connection with the execution of those growth plans.

A decline in the market value of our vessels could lead to a default under our loan agreements and the loss of our vessels.

We have incurred secured debt under loan agreements for our vessels and currently expect to incur additional secured debt in connection with our acquisition of other vessels. If the market value of our fleet declines, we may

not be in compliance with certain provisions of our existing loan agreements and we may not be able to refinance our debt or obtain additional financing. If we are unable to pledge additional collateral, our lenders could accelerate our debt and foreclose on our fleet.

Our existing loan agreements contain restrictive covenants that may limit our liquidity and corporate activities.

Our existing loan agreements impose operating and financial restrictions on us. These restrictions may limit our ability to:

- incur additional indebtedness;
- create liens on our assets;
- sell capital stock of our subsidiaries;
- make investments;
- engage in mergers or acquisitions;
- pay dividends;
- make capital expenditures;
- change the management of our vessels or terminate or materially amend the management agreement relating to each vessel; and
- sell our vessels.

Therefore, we may need to seek permission from our lenders in order to engage in some corporate actions. The lenders interests may be different from our interests, and we may not be able to obtain the lenders permission when needed. This may prevent us from taking actions that are in our best interest.

Servicing future debt would limit funds available for other purposes.

To finance our fleet, we have incurred secured debt under loan agreements for our vessels. We also currently expect to incur additional secured debt to finance the acquisition of additional vessels. We must dedicate a portion of our cash flow from operations to pay the principal and interest on our debt. These payments limit funds otherwise available for working capital expenditures and other purposes. As of December 31, 2006, we had total bank debt of approximately \$75.0 million. Our current repayment schedule requires us to repay \$18.0 million of this debt over the next 12 months. If we were unable to service our debt, it could have a material adverse effect on our financial condition and results of operations.

A rise in interest rates could cause an increase in our costs and have a material adverse effect on our financial condition and results of operations. To finance vessel purchases, we have borrowed, and may continue to borrow, under loan agreements that provide for periodic interest rate adjustments based on indices that fluctuate with changes in market interest rates. If interest rates increase significantly, it would increase our costs of financing our acquisition of vessels, which could have a material adverse effect on our financial condition and results of operations. Any increase in debt service would also reduce the funds available to us to purchase other vessels.

Our ability to obtain additional debt financing may be dependent on the performance of our then existing charters and the creditworthiness of our charterers.

The actual or perceived credit quality of our charterers, and any defaults by them, may materially affect our ability to obtain the additional debt financing that we will require to purchase additional vessels or may significantly increase our costs of obtaining such financing. Our inability to obtain additional financing at all or at a higher than anticipated cost may materially affect our results of operation and our ability to implement our business strategy.

As we expand our business, we may need to upgrade our operations and financial systems, and add more staff and crew. If we cannot upgrade these systems or recruit suitable employees, our performance may be adversely affected.

Our current operating and financial systems may not be adequate if we expand the size of our fleet, and our attempts to improve those systems may be ineffective. In addition, if we expand our fleet, we will have to rely on

Eurobulk to recruit suitable additional seafarers and shoreside administrative and management personnel. Eurobulk may not be able to continue to hire suitable employees as we expand our fleet. If Eurobulk's unaffiliated crewing agent encounters business or financial difficulties, we may not be able to adequately staff our vessels. If we are unable to operate our financial and operations systems effectively or to recruit suitable employees, our performance may be materially adversely affected.

Because we obtain some of our insurance through protection and indemnity associations, we may also be subject to calls in amounts based not only on our own claim records, but also the claim records of other members of the protection and indemnity associations.

We may be subject to calls in amounts based not only on our claim records but also the claim records of other members of the protection and indemnity associations through which we receive insurance coverage for tort liability, including pollution-related liability. Our payment of these calls could result in significant expense to us, which could have a material adverse effect on our business, results of operations, cash flows, financial condition and ability to pay dividends.

Labor interruptions could disrupt our business.

Our vessels are manned by masters, officers and crews that are employed by third parties. If not resolved in a timely and cost-effective manner, industrial action or other labor unrest could prevent or hinder our operations from being carried out normally and could have a material adverse effect on our business, results of operations, cash flows, financial condition and ability to pay dividends.

In the highly competitive international drybulk and container shipping industry, we may not be able to compete for charters with new entrants or established companies with greater resources.

We employ our vessels in highly competitive markets that are capital intensive and highly fragmented. Competition arises primarily from other vessel owners, some of whom have substantially greater resources than us. Competition for the transportation of drybulk and container cargoes can be intense and depends on price, location, size, age, condition and the acceptability of the vessel and its managers to the charterers. Due in part to the highly fragmented market, competitors with greater resources could operate larger fleets through consolidations or acquisitions that may be able to offer better prices and fleets.

We will not be able to take advantage of favorable opportunities in the current spot market with respect to vessels employed on period charters.

Six of the nine vessels in our fleet are employed under period charters, or otherwise protected from market fluctuations with remaining terms ranging between three months and 63 months, and one of our vessels is partly protected from market fluctuations (77% of its capacity in 2007 and 42% in 2008) via its participation in a shipping pool and three short panamax funds (cargo funds). Although period charters provide relatively steady streams of revenue, vessels committed to period charters may not be available for spot charters during periods of increasing charter hire rates, when spot charters might be more profitable. If we cannot re-charter these vessels on period charters or trade them in the spot market profitably, our results of operations and operating cash flow may suffer. We may not be able to secure charter hire rates in the future that will enable us to operate our vessels profitably.

We may be unable to attract and retain key management personnel and other employees in the shipping industry, which may negatively affect the effectiveness of our management and our results of operations.

Our success depends to a significant extent upon the abilities and efforts of our management team. Our success will depend upon our ability to hire additional employees and to retain key members of our management team. The loss of any of these individuals could adversely affect our business prospects and financial condition. Difficulty in hiring and

retaining personnel could adversely affect our results of operations. We do not currently intend to maintain key man life insurance on any of our officers.

Risks involved with operating ocean-going vessels could affect our business and reputation, which may reduce our revenues.

The operation of an ocean-going vessel carries inherent risks. These risks include, among others, the possibility of:

- marine disaster;
- piracy;
- environmental accidents;
- grounding, fire, explosions and collisions;
- cargo and property losses or damage;
- business interruptions caused by mechanical failure, human error, war, terrorism, political action in various countries, labor strikes or adverse weather conditions; and
- work stoppages or other labor problems with crew members serving on our vessels, substantially all of whom are unionized and covered by collective bargaining agreements.

Such occurrences could result in death or injury to persons, loss of property or environmental damage, delays in the delivery of cargo, loss of revenues from or termination of charter contracts, governmental fines, penalties or restrictions on conducting business, higher insurance rates, and damage to our reputation and customer relationships generally. Any of these circumstances or events could increase our costs or lower our revenues, which could result in reduction in the market price of our shares of common stock. The involvement of our vessels in an environmental disaster may harm our reputation as a safe and reliable vessel owner and operator.

The operation of drybulk carriers has certain unique operational risks.

The operation of certain ship types, such as drybulk carriers, has certain unique risks. With a drybulk carrier, the cargo itself and its interaction with the ship can be a risk factor. By their nature, drybulk cargoes are often heavy, dense, easily shifted, and react badly to water exposure. In addition, drybulk carriers are often subjected to battering treatment during unloading operations with grabs, jackhammers (to pry encrusted cargoes out of the hold), and small bulldozers. This treatment may cause damage to the vessel. Vessels damaged due to treatment during unloading procedures may be more susceptible to breach to the sea. Hull breaches in drybulk carriers may lead to the flooding of the vessels holds. If a drybulk carrier suffers flooding in its forward holds, the bulk cargo may become so dense and

waterlogged that its pressure may buckle the vessels bulkheads leading to the loss of a vessel. If we are unable to adequately maintain our vessels we may be unable to prevent these events. Any of these circumstances or events could negatively impact our business, financial condition, results of operations and ability to pay dividends. In addition, the loss of any of our vessels could harm our reputation as a safe and reliable vessel owner and operator.

The operation of container ships has certain unique operational risks.

The operation of container ships has certain unique risks. Container ships operate at high speeds in order to move cargoes around the world quickly and minimize delivery delays. These high speeds can result in greater impact in collisions and groundings resulting in more damage to the vessel when compared to vessels operating at lower speeds. In addition, due to the placement of the containers on a container ship, there is a greater risk that containers carried on deck will be lost overboard if an accident does occur. Furthermore, with the highly varied cargo that can be carried on a single container ship, there can be additional difficulties with any clean-up operation following an accident. Also, we may not be able to correctly control the contents and condition of cargoes within the containers which may give rise to events such as customer complaints, accidents on-board the ships or problems with authorities due to carriage of illegal cargoes. Any of these circumstances or events could negatively impact our business, financial condition, results of operations and ability to pay dividends. In addition, the loss of any of our vessels could harm our reputation as a safe and reliable vessel owner and operator.

Our vessels may suffer damage and it may face unexpected drydocking costs, which could affect our cash flow and financial condition.

If our vessels suffer damage, they may need to be repaired at a drydocking facility. The costs of drydock repairs are unpredictable and may be substantial. We may have to pay drydocking costs that our insurance does not cover. The loss of earnings while these vessels are being repaired and reconditioned, as well as the actual cost of these repairs, would decrease our earnings.

Purchasing and operating previously owned, or secondhand, vessels may result in increased operating costs and vessels off-hire, which could adversely affect our earnings.

Although we inspect the secondhand vessels prior to purchase, this inspection does not provide us with the same knowledge about their condition and cost of any required (or anticipated) repairs that it would have had if these vessels had been built for and operated exclusively by us. Generally, we do not receive the benefit of warranties on secondhand vessels.

In general, the cost of maintaining a vessel in good operating condition increases with the age of the vessel. As of December 31, 2006, the average age of our fleet was approximately 18.5 years. As our fleet ages, we will incur increased costs. Older vessels are typically less fuel efficient and more costly to maintain than more recently constructed vessels. Cargo insurance rates also increase with the age of a vessel, making older vessels less desirable to charterers. Governmental regulations and safety or other equipment standards related to the age of a vessel may also require expenditures for alterations or the addition of new equipment to our vessels and may restrict the type of activities in which our vessels may engage.

Governmental regulations, safety or other equipment standards related to the age of vessels may require expenditures for alterations, or the addition of new equipment, to our vessels and may restrict the type of activities in which the vessels may engage. As our vessels age, market conditions may not justify those expenditures or enable us to operate our vessels profitably during the remainder of their useful lives. If we sell vessels, we are not certain that the price for which we sell them will equal their carrying amount at that time.

We may not have adequate insurance to compensate us adequately for damage to, or loss of, our vessels.

We procure hull and machinery insurance, protection and indemnity insurance, which includes environmental damage and pollution insurance and war risk insurance and freight, demurrage and defense insurance for our fleet. We do not maintain insurance against loss of hire, which covers business interruptions that result in the loss of use of a vessel. We can give no assurance that we are adequately insured against all risks. We may not be able to obtain adequate insurance coverage for our fleet in the future. The insurers may not pay particular claims. Our insurance policies contain deductibles for which we will be responsible and limitations and exclusions which may increase our costs or lower our revenue. Moreover, the insurers may default on any claims they are required to pay. If our insurance is not enough to cover claims that may arise, it may have a material adverse effect on our financial condition and results of operations.

Our international operations expose us to risks of terrorism and piracy that may interfere with the operation of our vessels.

We are an international company and primarily conducts our operations outside the United States of America. Changing economic, political and governmental conditions in the countries where we are engaged in business or where our vessels are registered affect our operations. In the past, political conflicts, particularly in the Arabian Gulf, resulted in attacks on vessels, mining of waterways and other efforts to disrupt shipping in the area. Acts of terrorism and piracy have also affected vessels trading in regions such as the South China Sea. The likelihood of future acts of terrorism may increase, and our vessels may face higher risks of being attacked. We are not fully insured against any

of these risks. In addition, future hostilities or other political instability in regions where our vessels trade could have a material adverse effect on our trade patterns and adversely affect our operations and performance.

Obligations associated with being a public company require significant company resources and management attention.

We are subject to the reporting requirements of the Securities Exchange Act of 1934, as amended (the Exchange Act), and the other rules and regulations of the SEC, including the Sarbanes-Oxley Act of 2002. Section

404 of the Sarbanes-Oxley Act requires that we evaluate and determine the effectiveness of our internal control over financial reporting. However, as a non-accelerated filer, we are not yet subject to this requirement. Currently, we would be subject to such requirement by the end of our fiscal year ending December 31, 2007. If we have a material weakness in our internal control over financial reporting, we may not detect errors on a timely basis and our financial statements may be materially misstated. We have to dedicate a significant amount of time and resources to ensure compliance with these regulatory requirements.

We work with our legal, accounting and financial advisors to identify any areas in which changes should be made to our financial and management control systems to manage our growth and our obligations as a public company. We evaluate areas such as corporate governance, corporate control, internal audit, disclosure controls and procedures and financial reporting and accounting systems. We will make changes in any of these and other areas, including our internal control over financial reporting, which we believe are necessary. However, these and other measures we may take may not be sufficient to allow us to satisfy our obligations as a public company on a timely and reliable basis. In addition, compliance with reporting and other requirements applicable to public companies will create additional costs for us and will require the time and attention of management. Our limited management resources may exacerbate the difficulties in complying with these reporting and other requirements while focusing on executing our business strategy. We may not be able to predict or estimate the amount of the additional costs we may incur, the timing of such costs or the degree of impact that our management's attention to these matters will have on our business.

Our historical financial and operating data may not be representative of our future results because we are a recently formed company with a limited operating history as a stand-alone entity and as a publicly traded company.

Our historical financial and operating data may not be representative of our future results because we are a recently formed company with a limited operating history as a stand-alone entity and as a publicly traded company. Our consolidated financial statements include the financial position, results of operations and cash flows of shipowning companies managed by Eurobulk and majority owned by the Pittas family prior to their contribution to us. Although our results of operations, cash flows and financial condition reflected in the consolidated financial statements include all expenses allocable to our business, due to factors such as the additional administrative and financial obligations associated with operating as a publicly traded company, they may not be indicative of the results of operations that we would have achieved had we operated as a public entity for all periods presented or of future results that we may achieve as a publicly traded company with our current holding company structure.

Exposure to currency exchange rate fluctuations will result in fluctuations in our cash flows and operating results.

We generate all our revenues in U.S. dollars, but our ship manager, Eurobulk, incurs approximately 30% of vessel operating expenses and we incur general and administrative expenses in currencies other than the U.S. dollar. This difference could lead to fluctuations in our vessel operating expenses, which would affect our financial results. Expenses incurred in foreign currencies increase when the value of the U.S. dollar falls, which would reduce our profitability. We do not currently engage in hedging transactions to minimize our exposure to currency rate fluctuations, but we may do so in the future.

U.S. tax authorities could treat us as a passive foreign investment company, which could have adverse U.S. federal income tax consequences to U.S. holders.

A foreign corporation will be treated as a passive foreign investment company, or PFIC, for U.S. federal income tax purposes if either (1) at least 75% of its gross income for any taxable year consists of certain types of passive income or (2) at least 50% of the average value of the corporation's assets produce or are held for the production of those types of passive income. For purposes of these tests, passive income includes dividends, interest, and gains from the sale or exchange of investment property and rents and royalties other than rents and royalties which are received from unrelated parties in connection with the active conduct of a trade or business. For purposes of these tests, income derived from the performance of services does not constitute passive income. U.S. shareholders of a PFIC are subject

to a disadvantageous U.S. federal income tax regime with respect to the income derived by the PFIC, the distributions they receive from the PFIC and the gain, if any, they derive from the sale or other disposition of their shares in the PFIC.

Based on our proposed method of operation, we do not believe that we will be a PFIC with respect to any taxable year. In this regard, we intend to treat the gross income we derive or are deemed to derive from our time chartering activities as services income, rather than rental income. Accordingly, we believe that our income from our time chartering activities does not constitute passive income, and the assets that we own and operate in connection with the production of that income do not constitute passive assets.

There is, however, no direct legal authority under the PFIC rules addressing our proposed method of operation. Accordingly, the U.S. Internal Revenue Service, or IRS, or a court of law may not accept our position, and there is a risk that the IRS or a court of law could determine that we are a PFIC. Moreover, we may constitute a PFIC for any future taxable year if there were to be changes in the nature and extent of our operations.

If the IRS were to find that we are or have been a PFIC for any taxable year, our U.S. shareholders will face adverse U.S. tax consequences. Under the PFIC rules, unless those shareholders make an election available under the United States Internal Revenue Code of 1986 (the Code) (which election could itself have adverse consequences for such shareholders, as discussed below under Tax Consequences United States Federal Income Taxation of U.S. Holders), such shareholders would be liable to pay U.S. federal income tax at the then prevailing income tax rates on ordinary income plus interest upon excess distributions and upon any gain from the disposition of our shares, as if the excess distribution or gain had been recognized ratably over the shareholder's holding period of our shares. See Tax Consequences United States Federal Income Taxation of U.S. Holders for a more comprehensive discussion of the U.S. federal income tax consequences to U.S. shareholders if we are treated as a PFIC.

We may have to pay tax on United States source income, which would reduce our earnings.

Under the Code, 50% of the gross shipping income of a vessel owning or chartering corporation, such as ourselves and our subsidiaries, that is attributable to transportation that begins or ends, but that does not both begin and end, in the United States may be subject to a 4% United States federal income tax without allowance for deduction, unless that corporation qualifies for exemption from tax under section 883 of the Code and the applicable Treasury Regulations promulgated thereunder.

We expect that we and each of our subsidiaries qualify for this statutory tax exemption and we will take this position for United States federal income tax return reporting purposes. However, there are factual circumstances beyond our control that could cause us to lose the benefit of this tax exemption after this offering and thereby become subject to United States federal income tax on our United States source income. Due to the factual nature of the issues involved, we may not be able to give any assurances on our tax-exempt status or that of any of our subsidiaries.

If we or our subsidiaries are not entitled to exemption under Section 883 for any taxable year, we or our subsidiaries could be subject for those years to an effective 2% United States federal income tax on the shipping income these companies derive during the year that are attributable to the transport of cargoes to or from the United States. The imposition of this taxation would have a negative effect on our business and would result in decreased earnings available for distribution to our shareholders.

It may be difficult to enforce service of process and enforcement of judgments against us and our officers and directors.

We are a Marshall Islands corporation, and our executive offices are located outside of the United States in Maroussi, Greece. A majority of our directors and officers reside outside of the United States, and a substantial portion of our assets and the assets of our officers and directors are located outside of the United States. As a result, you may have difficulty serving legal process within the United States upon us or any of these persons. You may also have difficulty enforcing, both in and outside of the United States, judgments you may obtain in the U.S. courts against us or these persons in any action, including actions based upon the civil liability provisions of U.S. federal or state securities laws.

There is also substantial doubt that the courts of the Marshall Islands or Greece would enter judgments in original actions brought in those courts predicated on U.S. federal or state securities laws.

Risk Factors Relating To Our Common Stock

There may not be a liquid market for our common stock, which may cause our common stock to trade at lower prices and make it difficult to sell your common stock.

Although we have made application to list our shares on the NASDAQ Global Market, until now our shares have traded on the OTCBB and the trading volume has been low. We cannot predict at this time how actively our shares will trade in the public market or whether the price of our shares in the public market will reflect our actual financial performance.

The market price of our common stock has been and may in the future be subject to significant fluctuations.

The market price of our common stock has been and may in the future be subject to significant fluctuations as a result of many factors, some of which are beyond our control. Among the factors that have in the past and could in the future affect our stock price are:

- quarterly variations in our results of operations;
- changes in sales or earnings estimates or publication of research reports by analysts;
- speculation in the press or investment community about our business or the shipping industry generally;
- changes in market valuations of similar companies and stock market price and volume fluctuations generally;
- strategic actions by us or our competitors such as acquisitions or restructurings;
- regulatory developments;
- additions or departures of key personnel;
- general market conditions; and
- domestic and international economic, market and currency factors unrelated to our performance.

The stock markets in general, and the markets for drybulk shipping and shipping stocks in general, have experienced extreme volatility that has sometimes been unrelated to the operating performance of particular companies. These broad market fluctuations may adversely affect the trading price of our common stock.

You will experience immediate and substantial dilution as a result of this offering and may experience additional dilution in the future.

If you purchase common stock in this offering, you will pay more for your shares of common stock than the amounts paid on average by our existing shareholders for their shares. As a result, you will incur immediate and substantial dilution of \$4.28 per share, representing the difference between the public offering price and our pro forma as adjusted net tangible book value per share at September 30, 2006, after giving effect to this offering. In addition, purchasers of our common stock from us in this offering will have contributed approximately 54.2% of the aggregate price paid by all purchasers of our common stock from us, but will own only approximately 28.4% of the shares outstanding after this offering. For more information, please see Dilution.

Our stock price may fall below the minimum share price requirements of the NASDAQ Global Market.

We have made application to list our common stock on the NASDAQ Global Market. Although the offering price is currently above the \$5.00 minimum share price requirement to initially list our shares on the NASDAQ Global Market, we cannot predict what the price for our shares of our common stock will be following this offering. If our share price falls below \$5.00 after being listed, our common stock will not be marginable and this may reduce the liquidity of our of our common stock. If we are listed on the NASDAQ Global Market and our share price falls below the required \$1.00 minimum share price requirement for listed stock or we fail to maintain any other listing requirements, our stock could be delisted. Any of these events could result in an active trading market no longer existing for our shares.

The price of our shares may be volatile and less than you originally paid for such shares.

The price of our shares may be volatile, and may fluctuate due to factors such as:

- actual or anticipated fluctuations in quarterly and annual results;
- mergers and strategic alliances in the shipping industry;
- market conditions in the industry;
- changes in government regulation;
- fluctuations in our quarterly revenues and earnings and those of our publicly held competitors;
- payment of dividends;
- shortfalls in our operating results from levels forecasted by securities analysts;
- announcements concerning us or our competitors; and
- the general state of the securities markets.

The international drybulk and container shipping industry has been highly unpredictable and volatile. The market for stock of companies in this industry may be equally volatile. Our shares may trade at prices lower than you originally paid for such shares.

Our Articles of Incorporation and Bylaws contain anti-takeover provisions that may discourage, delay or prevent (1) our merger or acquisition and/or (2) the removal of incumbent directors and officers.

Our current Articles of Incorporation and Bylaws contain certain anti-takeover provisions. These provisions include blank check preferred stock, the prohibition of cumulative voting in the election of directors, a classified board of directors, advance written notice for shareholder nominations for directors, removal of directors only for cause, advance written notice of shareholder proposals for the removal of directors and limitations on action by shareholders.

These provisions, either individually or in the aggregate, may discourage, delay or prevent (1) our merger or acquisition by means of a tender offer, a proxy contest or otherwise, that a shareholder may consider in its best interest and (2) the removal of incumbent directors and officers.

Future sales of our stock could cause the market price of our common stock to decline.

Sales of a substantial number of shares of our common stock in the public market, or the perception that these sales could occur, may depress the market price for our common stock. These sales could also impair our ability to raise additional capital through the sale of our equity securities in the future.

Pursuant to our prior Form F-1 registration statement, we registered for resale 2,342,331 shares of common stock issued in our Private Placement, 585,581 shares of our common stock issuable upon the exercise of warrants issued in the Private Placement and 272,868 shares of our common stock issued to certain affiliates of Cove, in connection with the merger of Cove with our wholly-owned subsidiary, Euroseas Acquisition Company Inc. At no time did Euroseas Ltd., the parent company, merge with or into Cove. Registration of such shares has, except for any shares purchased by affiliates, resulted in such shares becoming freely tradable without restriction under the Securities Act of 1933, as amended (the Securities Act).

In addition, we have entered into a registration rights agreement with Friends, our largest shareholder, pursuant to which we have granted Friends the right to require us to register under the Securities Act, shares of our common stock held by it. Under the registration rights agreement, Friends has the right to request that we register the sale of shares held by it on its behalf and may require us to make available shelf registration statements permitting sales of shares into the market from time to time over an extended period. In addition, Friends has the ability to exercise certain piggyback registration rights in connection with registered offerings requested by stockholders or initiated by us. Friends has agreed to waive its rights under the registration rights agreement, including the right to have any of its shares of our common stock registered in this offering, for a period beginning on the date of this prospectus and ending 180 days from the later of the effective date of the Registration Statement or the pricing of this offering. Registration of such shares under the Securities Act would, except for shares purchased by affiliates, result in such shares becoming freely tradable without restriction under the Securities Act immediately upon the effectiveness of such registration. Shares not registered pursuant to the registration rights agreement may, subject to the lock-up agreement to which Friends is a party, be resold pursuant to an exemption from the registration requirements of the Securities Act, including the exemptions provided by Rule 144 and Regulation S under the Securities Act. We refer

you to the sections of this prospectus entitled Certain Relationships and Related Party Transactions, Shares Eligible for Future Sale and Underwriting for further information regarding the circumstances under which additional shares of our common stock may be sold.

We may issue additional shares of our stock in the future and our stockholders may elect to sell large numbers of shares held by them from time to time. Our amended and restated articles of incorporation authorize us to issue up to 100,000,000 shares of common stock and 20,000,000 shares of preferred stock, of which 17,620,114 shares of common stock will be outstanding immediately after this offering, assuming that the underwriters do not exercise their over-allotment option. Immediately after this offering, assuming that the underwriters do not exercise their over-allotment option, entities affiliated with our President and Chief Executive Officer and certain other large affiliated shareholders will own or control 10,251,390 shares (assuming no exercise of 83,334 warrants owned by Eurobulk Marine Holdings, Inc.), or approximately 58.1%, of our outstanding common stock assuming no exercise of the underwriters over-allotment option. The number of shares of stock available for sale in the public market will be limited by restrictions applicable under securities laws and agreements that we and our executive officers, directors and principal shareholders have entered into with the underwriters of this offering. Subject to certain exceptions, these agreements generally restrict us and our executive officers, directors and certain shareholders from directly or indirectly offering, selling, pledging, hedging or otherwise disposing of our equity securities or any security that is convertible into or exercisable or exchangeable for our equity securities and from engaging in certain other transactions relating to such securities for a period of 180 days (with respect to our officers, directors, Friends and Eurobulk Marine) and 90 days (with respect to certain other large, non-affiliated shareholders) from the later of the effective date of this Registration Statement or the pricing of this offering without the prior written consent of Oppenheimer & Co. Inc.

Dividends paid on the common stock to U.S. individuals, trusts and estates may be taxed as ordinary income.

Although we have made application to list our common stock on the NASDAQ Global Market, if our common stock fails to meet or maintain the requirements of the NASDAQ Global Market or another established securities market in the United States, such shares will trade over the counter and any dividends paid on the shares will be treated for U.S. tax purposes as ordinary income rather than qualified dividend income which would otherwise be taxed to U.S. individuals, trusts and estates at preferential tax rates. There is no assurance that we will be able to maintain the listing of our common stock on the NASDAQ Global Market or another established securities market in the United States. Therefore there is no assurance that any dividends paid on the common stock will be treated as qualified dividend income and subject to tax at preferential rates.

Because the Republic of the Marshall Islands, where we are incorporated, does not have a well-developed body of corporate law, shareholders may have fewer rights and protections than under typical United States law, such as Delaware, and shareholders may have difficulty in protecting their interest with regard to actions taken by our Board of Directors.

Our corporate affairs are governed by our Articles of Incorporation and Bylaws and by the Marshall Islands Business Corporations Act (the BCA). The provisions of the BCA resemble provisions of the corporation laws of a number of states in the United States. However, there have been few judicial cases in the Republic of the Marshall Islands interpreting the BCA. The rights and fiduciary responsibilities of directors under the law of the Republic of the Marshall Islands are not as clearly established as the rights and fiduciary responsibilities of directors under statutes or judicial precedent in existence in certain U.S. jurisdictions. Stockholder rights may differ as well. For example, under Marshall Islands law, a copy of the notice of any meeting of the shareholders must be given not less than 15 days before the meeting, whereas in Delaware such notice must be given not less than 10 days before the meeting. Therefore, if immediate shareholder action is required, a meeting may not be able to be convened as quickly as it can be convened under Delaware law. Also, under Marshall Islands law, any action required to be taken by a meeting of shareholders may only be taken without a meeting if consent is in writing and is signed by all of the shareholders entitled to vote, whereas under Delaware law action may be taken by consent if approved by the number of

shareholders that would be required to approve such action at a meeting. Therefore, under Marshall Islands law, it may be more difficult for a company to take certain actions without a meeting even if a majority of the shareholders approve of such action. While the BCA does specifically incorporate the non-statutory law, or judicial case law, of the State of Delaware and other states with substantially similar legislative provisions, public shareholders may have more difficulty in protecting their interests in the face of actions by the management, directors or controlling shareholders than would shareholders of a corporation incorporated in a U.S. jurisdiction. For more information with respect to how stockholder rights under Marshall Islands law compare with stockholder rights under Delaware law, please read Marshall Islands Company Considerations.

PRICE RANGE OF COMMON STOCK

The trading market for shares of our common stock is the OTCBB, on which our shares trade under the symbol EUSEF.OB. Our common stock began trading on the OTCBB on May 5, 2006. We have made application to have our common stock listed on the NASDAQ Global Market under the symbol ESEA upon completion of this offering. The following table sets forth the high and low closing prices for shares of our common stock as reported by the OTCBB, after giving effect to our 1-for-3 reverse stock split that was effected on October 6, 2006:

For the Period:	Low	High
Quarterly for 2006:		
Second Quarter (from May 5, 2006)	\$ 8.82	\$ 18.24
Third Quarter	\$ 8.55	\$ 9.15
Fourth Quarter		
Monthly for 2006:		
May (from May 5, 2006)	\$ 9.39	\$ 18.24
June	\$ 8.82	\$ 10.14
July	\$ 8.97	\$ 9.12
August	\$ 8.82	\$ 9.00
September	\$ 8.55	\$ 9.15
October	\$ 8.37	\$ 9.00
November	\$ 5.60	\$ 9.00
December	\$ 6.70	\$ 7.50
Quarterly for 2007:		
First Quarter (through January 25, 2007)	\$ 7.00	\$ 8.50
Monthly for 2007:		
January (through January 25, 2007)	\$ 7.00	\$ 8.50

DIVIDEND POLICY

Our Board of Directors has adopted a policy to declare a regular minimum quarterly dividend of \$0.22 per share to shareholders each May, August, November and February provided there are sufficient funds. Any excess cash flow may be used to pay additional dividends, fund our growth or repay Company debt, as determined by our Board of Directors.

Since our Private Placement in August 25, 2005, we have declared dividends on our common stock in the amount of \$0.21, \$0.18, \$0.18, \$0.18 and \$0.21 per common share for the fiscal periods ended on September 30, 2005, December 31, 2005, March 31, 2006, June 30, 2006 and September 30, 2006 respectively for a total of \$0.96 per common share. The aggregate amount of such dividends for the twelve month period ended September 30, 2006 was \$9,465,082. On January 8, 2007 we declared a dividend on our common stock in the amount of \$0.22 per share for the results of operations for the three-month period ended December 31, 2006, which is payable on or about February 15, 2007 to all common shareholders of record as of January 29, 2007. We expect to declare our next dividend in May 2007.

We paid \$687,500, \$1,200,000, \$26,962,500, \$46,875,223 (consisting of \$30,175,223 of dividends and \$16,700,000 as return of capital) and \$6,814,859 in 2002, 2003, 2004, 2005 and in the first nine months of 2006, respectively. Over the period January 1, 2002 to June 30, 2005, we paid substantially all of our net income as dividends.

The exact amount of dividend payments will be dependent upon our earnings, financial condition, cash requirements and availability, restrictions in our loan agreements, growth strategy, charter rates in the drybulk and container shipping industry, the provisions of Marshall Islands law affecting the payment of distributions to shareholders and other factors, such as the acquisition of additional vessels. However, we do not believe that the addition of vessels to our fleet will adversely impact our dividend policy of paying quarterly dividends to our shareholders out of our net profits. We believe that the addition of vessels to our fleet in the future should enable us to pay a higher dividend per share than we would otherwise be able to pay without additional vessels since such additional vessels should increase our earnings. However, we cannot give any current estimate of what dividends may be in the future since any such dividend amounts will depend upon the amount of revenues those vessels are able to generate and the costs incurred in operating such vessels.

In addition, Marshall Islands law generally prohibits the payment of dividends other than from surplus (retained earnings and the excess of consideration received for the sale of shares above the par value of the shares), but if there is no surplus, dividends may be declared out of the net profits (basically, the excess of our revenue over our expenses) for the fiscal year in which the dividend is declared or the preceding fiscal year. Marshall Islands law also prohibits the payment of dividends while a company is insolvent or if it would be rendered insolvent upon the payment of a dividend.

Dividends may be declared in conformity with applicable law by, and at the discretion of, our Board of Directors at any regular or special meeting. Dividends may be declared and paid in cash, stock or other property of the Company. The payment of dividends is not guaranteed or assured, and may be discontinued at any time at the discretion of our Board of Directors.

USE OF PROCEEDS

We estimate that we will receive net proceeds of approximately \$38.5 million from this offering assuming that the underwriters' over-allotment option is not exercised and after deducting underwriting discounts and commissions, offering expenses and the financial advisory fee payable to Cantor Fitzgerald & Co. We intend to use approximately \$7.0 million of the net proceeds to repay a portion of the debt that was used to finance our acquisition of m/v *YM Xingang I*. The loan used to acquire this vessel has a final maturity date of December 2013 and bears interest at a rate of LIBOR plus 0.935%, which rate shall be reduced to LIBOR plus 0.900% following the pre-payment. We expect to use the remaining proceeds to acquire additional vessels in the sectors in which we currently operate. Any amounts not so used will be applied to general corporate purposes.

CAPITALIZATION

The following table sets forth our consolidated capitalization at September 30, 2006:

- on a historical basis without any adjustment to reflect subsequent or anticipated events;

- as adjusted for certain subsequent events:

(a) cash dividend of \$2,650,232 declared on November 9, 2006 and paid on or about December 15, 2006;

(b) new loan to finance the acquisition of m/v *YM Xingang I*, \$20,000,000 of which was drawn on November 15, 2006 and repayments for loans outstanding at September 30, 2006 amounting to \$3,960,000;

(c) cash dividend of \$2,776,433 declared on January 8, 2007 to be paid on or about February 15, 2007;

- on an as further adjusted basis for the sale of 5,000,000 shares at an offering price of \$8.50 per share after the underwriters' discounts and commissions, offering expenses, payment of a financial advisory fee and after receipt and application of net proceeds as outlined in Use of Proceeds.

There has been no material change in our capitalization between September 30, 2006 and the date of this prospectus as adjusted as described above. Current portion of long term debt in the As Adjusted column represents current portion of the new and existing debt as of December 31, 2006; in the As Further Adjusted column part of the proceeds of the offering are used to repay a portion of the debt outstanding as of December 31, 2006.

	Actual As of September 30, 2006	As Adjusted	As Further Adjusted
Debt:			
Current portion of long term debt	\$ 14,390,000	\$ 18,040,000	\$ 16,640,000
Total long term debt, net of current portion	44,520,000	56,910,000	51,310,000
Total debt	58,910,000	74,950,000	67,950,000
Shareholders' equity			
Common stock, \$.03 par value; 100,000,000 shares authorized on an actual and as adjusted basis; 12,620,114 shares issued and outstanding on an actual and as adjusted basis; 17,620,114	378,603	378,603	528,603

shares issued and outstanding on an as further adjusted basis

Preferred stock, \$0.01 par value; 20,000,000 shares authorized on an actual and adjusted basis; 0 shares issued and outstanding

Additional paid-in capital	18,283,769	18,283,769	56,633,769
Retained earnings	17,252,526	17,252,526	17,252,526
Dividends declared on November 9, 2006 and January 8, 2007		(5,426,665)	(5,426,665)
Total shareholders equity	35,914,898	30,488,233	68,988,233
Total capitalization	\$ 94,824,898	\$ 105,438,233	\$ 136,938,233

As of September 30, 2006, we had \$14.1 million in cash and cash equivalents and on an as further adjusted basis cash and cash equivalents are \$28.9 million excluding restricted cash.

DILUTION

At September 30, 2006, we had net tangible book value of \$35.9 million, or \$2.85 per share. After giving effect to the issuance of 5,000,000 shares of common stock as part of this offering at an offering price of \$8.50 per share, the pro forma net tangible book value at September 30, 2006 would have been \$78.4 million or \$4.22 per share. This represents an immediate appreciation in net tangible book value of \$1.38 per share to existing shareholders and an immediate dilution of net tangible book value of \$4.28 per share to new investors. The following table illustrates the pro forma per share dilution and appreciation at September 30, 2006:

Initial offering price per share in this offering	\$ 8.50
Net tangible book value per share as of September 30, 2006	2.85
Increase in net tangible book value attributable to the existing shareholders	1.38
Proforma net tangible book value per share after giving effect to this offering	4.22
Dilution per share to the new investors	\$ 4.28

Net tangible book value per share of our common stock is determined by dividing our tangible net worth, which consists of tangible assets less liabilities, by the number of shares of our common stock outstanding. Dilution is determined by subtracting the net tangible book value per share of common stock after this offering from the public offering price per share.

The following table summarizes, on a pro forma basis as at September 30, 2006, the differences between the number of shares of common stock acquired from us, the total amount paid and the average price per share paid by the existing holders of shares of common stock and by the investors in this offering based upon the share price of \$8.50 per share as per the closing price on January 25, 2007.

	Pro Forma Shares Outstanding		Total Consideration		Average Price Per Share
	Number	Percent	Amount	Percent	
Existing shareholders	12,620,114	71.6 %	\$ 35,914,898	45.8 %	\$ 2.85
New investors	5,000,000	28.4 %	\$ 42,500,000	54.2 %	\$ 8.50
Total	17,620,114	100.0 %	\$ 78,414,898	100.0 %	\$ 4.45

SELECTED HISTORICAL FINANCIAL INFORMATION AND DATA

The following historical financial information and data were derived from our audited financial statements for the years ended December 31, 2003, 2004 and 2005 and our unaudited financial statements for the nine months ended September 30, 2005 and 2006 included elsewhere in this prospectus or previously filed with the Securities and Exchange Commission. We derived the information for the year ended December 31, 2002 from our audited financial statements not included in this prospectus. The information is only a summary and should be read in conjunction with our historical financial statements and related notes included in this prospectus, and the section of this prospectus entitled Management's Discussion and Analysis of Financial Condition and Results of Operations. The historical data included below and elsewhere in this prospectus are not necessarily indicative of our future performance.

(1)

We have not included financial data for the year ended 2001 since we were only formed in May 2005 and incurred significant expense in the preparation of our consolidated financial statements for 2002, 2003, 2004 and 2005 in connection with the filing of registration statements with the SEC for our public offering. We believe that it would constitute unreasonable effort or expense for us to include 2001 financials. The Company's predecessors (which are the separate shipowning entities that became wholly-owned by the Company subsequent to its formation) prepared financial statements for the year ended December 31, 2001 on a basis different from the financial statements included in this prospectus and the effort and cost involved in converting such financial statements into a basis similar to those financial statements included herein would be unreasonably burdensome.

(2)

In 2004, the estimated scrap value of the vessels was increased from \$170 to \$300 per lightweight ton to better reflect market price developments in the scrap metal market. The effect of this change in estimate was to reduce 2004 depreciation expense by \$1,400,010 and increase 2004 net income by the same amount. The m/v *Widar* was sold in April 2004. Depreciation expenses for the m/v *Widar* for 2004 amounted to \$136,384 compared to \$409,149 for 2003. The m/v *Pantelis P* was sold in May 2006. Depreciation expenses for the m/v *Pantelis P* for the nine month period ended September 30, 2006 amounted to \$107,587 compared to \$193,656 in the same period in 2005. The m/v *John P* was sold in July 2006. Depreciation expenses for the m/v *John P* for the nine month period ended September 30, 2006 amounted to \$60,697 (the vessel was classified as an asset held for sale after March 31, 2006) compared to \$182,093 in the same period in 2005.

(3)

We consider Adjusted EBITDA to represent net earnings before interest, taxes, depreciation and amortization including the amortization of deferred revenue from below market period charters when we acquired m/v *Tasman Trader* and m/v *Aristides N.P.* Adjusted EBITDA does not represent and should not be considered as an alternative to net income or cash flow from operations, as determined by United States generally accepted accounting principles, or U.S. GAAP, and our calculation of Adjusted EBITDA may not be comparable to that reported by other companies. Adjusted EBITDA is included herein because it is a basis upon which we assess our liquidity position and because we believe that it presents useful information to investors regarding a company's ability to service and/or incur indebtedness. The Company's definition of Adjusted EBITDA may not be the same as that used by other companies in the shipping or other industries.

Adjusted EBITDA Reconciliation to Net Income:

	Year Ended December 31,				Nine-Months Ended September 30,

(4)

The dividend amounts for 2005 and for the nine months ended September 30, 2005 reflect aggregate dividends of \$30,175,223 and \$27,525,000, respectively, and a return of capital in the amount of \$16,700,000. The total payment to shareholders made in 2005 is in excess of previously retained earnings because the Company decided to distribute to its original shareholders in advance of going public most of the profits relating to the Company's operations up to that time and to recapitalize the Company. This one-time dividend should not be considered indicative of future dividend payments and the Company refers you to the other sections in this prospectus for further information on the Company's dividend policy. The dividends declared for 2003 and 2004 include a \$76,000 and \$22,856 non-cash dividend from minority interest holdings. Cash paid for dividends/return of capital in 2004 includes a \$1,549,855 return of capital due to the sale of m/v *Widar*.

(5)

The average TCE rate calculation shown above is based on the actual number of available and voyage days. In the above table, the number of available voyage days was rounded to the nearest number of full days.

MANAGEMENT'S DISCUSSION AND ANALYSIS OF FINANCIAL CONDITION AND RESULTS OF OPERATIONS

The following discussion should be read in conjunction with our financial statements and footnotes thereto contained in this prospectus. This discussion contains forward-looking statements, which are based on our assumptions about the future of our business. Our actual results will likely differ materially from those contained in the forward-looking statements. Please read *Forward-Looking Statements* for additional information regarding forward-looking statements used in this prospectus. Reference in the following discussion to our and us refer to Euroseas, our subsidiaries and the predecessor operations of Euroseas, except where the context otherwise indicates or requires.

General

We are a provider of worldwide ocean-going transportation services. We own and operate drybulk carriers that transport major bulks such as iron ore, coal and grains, and minor bulks such as bauxite, phosphate and fertilizers. We also own and operate container ships and multipurpose vessels that transport dry and refrigerated cargoes, mainly including manufactured products and perishables.

We actively manage the deployment of our fleet between spot charters, which generally last from several days to several weeks, and period charters, which can last up to several years. Some of our vessels may participate in shipping pools, or, in some cases participate in contracts of affreightment. Vessels operating on period charters provide more predictable cash flows but can yield lower profit margins than vessels operating in the spot market during periods characterized by favorable market conditions. Vessels operating in the spot market generate revenues that are less predictable but may enable us to achieve increased profit margins during periods of high vessel rates although we are exposed to the risk of declining vessel rates, which may have a materially adverse impact on our financial performance. Vessels operating in shipping pools benefit from better scheduling, and thus increased utilization, and better access to contracts of affreightment due to the larger commercial operation. Shipping pools may employ the vessels either exclusively in spot charters or a combination of spot and period charters and contracts of affreightment. We are constantly evaluating opportunities to increase the number of our vessels deployed on period charters or to participate in shipping pools (if available for our vessels). However, we only expect to enter into additional period charters or shipping pools if we can obtain contract terms that satisfy our criteria. Container ships are employed almost exclusively on period charter contracts. We carefully evaluate the length and the rate of the period charter contract at the time of fixing or renewing a contract considering market conditions, trends and expectations.

As of December 31, 2006, our fleet consisted of nine vessels as follows: four drybulk carriers, comprised of two Panamax drybulk carriers and two Handysize drybulk carriers, four container ships and one multipurpose vessel. The total cargo carrying capacity of our four drybulk carriers and our four container ships is 207,464 dwt and 6,235 teu, respectively. Our multipurpose vessel can carry 22,568 dwt or 950 teu, or a combination thereof.

We constantly evaluate secondhand vessel purchase opportunities to expand our fleet accretive to our earnings and cash flow, as well as, sale opportunities of certain of our vessels. Since our Private Placement in August 2005, we sold two of our drybulk carriers (m/v *John P* and m/v *Pantelis P*, both built in 1981) and contracted to sell one more vessel (m/v *Ariel* built in 1977, expected to be delivered to buyers on or about February 15, 2007) and we purchased one multipurpose vessel (m/v *Tasman Trader* built in 1990), one drybulk carrier (m/v *Aristides N.P.* built in 1993) and two container ships (m/v *Artemis* built in 1987 and m/v *YM Xingang I* built in 1993) in accordance with our strategy of renewing and expanding our fleet.

Since our Private Placement in August 2005, we have declared six consecutive dividends on our common stock in a total amount of \$1.18 per common share (all the per share amounts set forth in this section are adjusted for the 1-for-3 reverse stock split effected on October 6, 2006, as described below). On January 8, 2007, we declared our sixth consecutive quarterly dividend on our common stock in the amount of \$0.22 per common share for the results of operations for the three-month period ended December 31, 2006, and will be paid on or about February 15, 2007 to all

common shareholders of record as of January 29, 2007. This dividend on our common stock follows our dividend declarations of \$0.21 per common share on November 9, 2006, \$0.18 per common share on August 7, 2006, \$0.18 per common share on May 12, 2006, \$0.18 per share on February 7, 2006 and \$0.21 per share on November 2, 2005.

On October 6, 2006, we effected a 1-for-3 reverse stock split in order to increase our common share price to satisfy the price per share listing requirements of the NASDAQ Global Market. As a result of the reverse stock split, the outstanding number of shares of our common stock was reduced from 37,860,341 to 12,620,114, subject to increase to the extent the reverse stock split results in any shareholder receiving fractional shares, in which event such fractional share will be rounded up to the next whole share. The reverse stock split did not affect the number of authorized shares of our common stock or preferred stock which remain at 100,000,000 shares and 20,000,000 shares, respectively.

Operating Results

Factors Affecting Our Results of Operations

We believe that the important measures for analyzing trends in the results of our operations consist of the following:

Calendar days. We define calendar days as the total number of days in a period during which each vessel in our fleet was in our possession including off-hire days associated with major repairs, drydockings or special or intermediate surveys. Calendar days are an indicator of the size of our fleet over a period and affect both the amount of revenues and the amount of expenses that we record during that period.

Available days. We define available days as the total number of days in a period during which each vessel in our fleet was in our possession net of off-hire days associated with scheduled repairs, drydockings or special or intermediate surveys. The shipping industry uses available days to measure the number of days in a period during which vessels were available to generate revenues.

Voyage days. We define voyage days as the total number of days in a period during which each vessel in our fleet was in our possession net of off-hire days associated with scheduled and unscheduled repairs, drydockings or special or intermediate surveys or days waiting to find employment. The shipping industry uses voyage days to measure the number of days in a period during which vessels actually generate revenues.

Fleet utilization. We calculate fleet utilization by dividing the number of our voyage days during a period by the number of our available days during that period. The shipping industry uses fleet utilization to measure a company's efficiency in finding suitable employment for its vessels and minimizing the amount of days that its vessels are off-hire for reasons such as unscheduled repairs or days waiting to find employment.

Spot charter rates. Spot charter rates are volatile and fluctuate on a seasonal and year to year basis. The fluctuations are caused by imbalances in the availability of cargoes for shipment and the number of vessels available at any given time to transport these cargoes.

Time Charter Equivalent (TCE). A standard maritime industry performance measure used to evaluate performance is the daily time charter equivalent, or daily TCE. The TCE rate achieved on a given voyage is expressed in \$ per day and is generally calculated by subtracting voyage expenses, including bunkers and port charges, from voyage revenues and dividing the net amount (time charter equivalent revenues) by the voyage days, including the trip to the loading port. TCE is a standard seaborne transportation industry performance measure used primarily to compare period-to-period changes in a seaborne transportation company's performance despite changes in the mix of charter types (i.e., spot charters, time charters and bareboat charters) under which the vessels may be employed during specific periods.

Basis of Presentation and General Information

We are a Marshall Islands company formed on May 5, 2005 to consolidate the beneficial owners of seven ship-owning companies. On June 28, 2005, the beneficial owners exchanged all their shares in the ship-owning

companies for shares in Friends. On June 29, 2005, Friends then exchanged all the shares in the ship-owning companies for shares in the Company, thus becoming our sole shareholder. This transaction constituted a reorganization of companies under common control, and was accounted for in a manner similar to a pooling of interests as each ship-owning company was under the common control of the Pittas family prior to the transfer of ownership of the companies to us. Accordingly, the consolidated financial statements included in this prospectus have been presented as if the ship-owning companies were consolidated subsidiaries of the Company for all periods

presented and use the historical carrying costs of the assets and the liabilities of the ship-owning companies listed therein.

We use the following measures to describe our financial performance:

Voyage revenues. Our voyage revenues are driven primarily by the number of vessels in our fleet, the number of voyage days during which our vessels generate revenues and the amount of daily charter hire that our vessels earn under charters, which, in turn, are affected by a number of factors, including our decisions relating to vessel acquisitions and disposals, the amount of time that we spend positioning our vessels, the amount of time that our vessels spend in drydock undergoing repairs, maintenance and upgrade work, the age, condition and specifications of our vessels, levels of supply and demand in the transportation market and other factors affecting spot market charter rates in both the drybulk carrier and container ship markets.

Commissions. We pay commissions on all chartering arrangements of 1 to 1.25% to Eurochart, one of our affiliates, plus additional commissions of usually up to 5% to other brokers involved in the transaction. These additional commissions, as well as changes to charter rates will cause our commission expenses to fluctuate from period to period. Eurochart also receives a fee equal to 1% calculated as stated in the relevant memorandum of agreement for any vessel bought or sold by them on our behalf. We also usually pay commissions of up to 2% to other brokers involved in purchase and sale transactions.

Voyage expenses. Voyage expenses primarily consist of port, canal and fuel costs that are unique to a particular voyage which would otherwise be paid by the charterer under a time charter contract, as well as commissions. Under time charters, the charterer pays voyage expenses whereas under voyage charters, we pay such expenses. The amounts of such voyage expenses are driven by the mix of charters undertaken during the period.

Vessel operating expenses. Vessel operating expenses include crew wages and related costs, the cost of insurance, expenses relating to repairs and maintenance, the costs of spares and consumable stores, tonnage taxes and other miscellaneous expenses. Our vessel operating expenses, which generally represent fixed costs, have historically changed in line with the size of our fleet. Other factors beyond our control, some of which may affect the shipping industry in general (including, for instance, developments relating to market prices for insurance or inflationary increases) may also cause these expenses to increase.

Management fees. These are the fees that we pay to Eurobulk, our affiliated ship manager, under our subsidiaries' management agreements with Eurobulk for the technical and commercial management that Eurobulk performs on our behalf. The current fee is €610 (or \$797.90) per vessel per day under a new master management agreement with Eurobulk effective as of October 1, 2006 and is payable monthly in advance, adjusted annually for inflation.

Depreciation. We depreciate our vessels on a straight-line basis with reference to the cost of the vessel, age and scrap value as estimated at the date of acquisition. Depreciation is calculated over the remaining useful life of the vessel, which is estimated to range from 25 to 30 years from the date of original construction. Remaining useful lives of property are periodically reviewed and revised to recognize changes in conditions, new regulations or other reasons. Revisions of estimated lives are recognized over current and future periods. As of September 30, 2006, we depreciated all but one of our vessels over a depreciable life of 25 years. One of our vessels, m/v *Ariel*, built in 1977, has already reached its 30th year, is fully depreciated and incurred no depreciation charge since the beginning of 2004. During 2004, management increased its estimate of the scrap value of its vessels from \$170 to \$300 per lightweight ton to reflect market price developments in the scrap metal market which resulted in a reduction of depreciation charges.

Amortization of deferred drydocking costs. Our vessels are required to be drydocked approximately every 30 to 60 months for major repairs and maintenance that cannot be performed while the vessels are trading. We capitalize the costs associated with drydockings as they occur and amortize these costs on a straight-line basis over the period between drydockings. Costs capitalized as part of the drydocking include actual costs incurred at the drydock yard;

cost of hiring riding crews to effect repairs on a vessel and parts used in making such repairs that are reasonably made in anticipation of reducing the duration or cost of the drydocking; cost of travel, lodging and subsistence of our personnel sent to the drydocking site to supervise; and the cost of hiring a third party to oversee a drydocking. We believe that these criteria are consistent with industry practice and that our policy of capitalization reflects the economics and market values of the vessels. Commencing January 1, 2006, we revised our policy to exclude the cost of hiring riding crews and the cost of parts used by riding crews from amounts capitalized as drydocking cost. We

have not restated any historical financial statements because we determined that the impact of such a revision is not material to our operating income and net income for any periods presented.

Interest expense. We traditionally finance vessel acquisitions partly with debt on which we incur interest expense. The interest rate we pay is generally linked to the 3-month LIBOR rate, although from time to time we utilize fixed rate loans or could use interest rate swaps to eliminate our interest rate exposure. Interest due is expensed in the period is accrued. Loan costs are amortized over the period of the loan; the un-amortized portion is written-off if the loan is prepaid early.

General and administrative expenses. We will incur expenses consisting mainly of the fixed portion of the fees which we pay Eurobulk, professional fees, directors liability insurance and reimbursement of our directors and officers travel-related expenses. General and administrative expenses have increased since we became a public company. We acquire executive services of our Chief Executive Officer, Chief Financial Officer and Secretary, through Eurobulk. As of October 1, 2006, these services will now be provided to us under our new master management agreement with Eurobulk. For the nine-month period ended September 30, 2006, the fixed portion of the management fees which we paid due to us being as a public company is estimated to be \$379,375. Commencing October 1, 2006, the fee will be \$517,500 on an annualized basis. This fee is adjusted for Greek inflation every July 1 under our master management agreement with Eurobulk.

Results from Operations

We operated the following types of vessels during the nine month period ended September 30, 2006:

	Drybulk Carriers	Container Ships	Multipurpose Carriers	Total
Average number of vessels	4.33	3.00	0.58	7.91
Number of vessels at end of period	4.00	3.00	1.00	8.00
Dwt capacity at end of period	207,464		22,600	230,064
TEU capacity at end of period		4,636	950	5,586

(1)

After the acquisition of m/v *YM Xingang I*, on November 15, 2006, a 1,599 TEU, 1993-built container ship, and the sale of m/v *Ariel* on or about February 15, 2007, a 33,712 dwt 1977-built drybulk carrier, the average age of our drybulk carriers will be approximately 18.5 years and of the entire fleet about 17 years.

Nine Month Period Ended September 30, 2006 Compared to Nine Month Period Ended September 30, 2005.

Voyage revenues. Voyage revenues for the nine-month period ended September 30, 2006 were \$29.7 million, down 12.9% compared to the same period in 2005 during which voyage revenues amounted to \$34.1 million. The decrease was primarily due to the lower charter rates our vessels achieved due, in turn, to a decline in charter market rates, and despite the fact that we operated on average more vessels compared to the same period in 2005 and partially offset by \$0.4 million of deferred revenue amortization. Our fleet of 7.9 vessels had throughout the nine-month period ended September 30, 2006 about 28 unscheduled off-hire days and 47 days of scheduled off-hire for the drydocking of m/v *Kuo Hsiung* and m/v *Nikolaos P*, generating an average TCE rate per vessel of \$13,766 per day compared to \$18,374 per day per vessel for the same period in 2005.

Commissions. Commissions for the nine-month period ended September 30, 2006 were \$1.3 million. At 4.3% of voyage revenues, commissions were lower than in the same period in 2005. For the nine months ended September 30, 2005, commissions amounted to \$1.8 million, or 5.4% of voyage revenues. The lower level of commissions in 2006 is due to the lower revenues as compared to 2005 and to the fact that recently concluded charter contracts had lower commission levels and the fact that m/v Irimi participated in the Klaveness Baumarine shipping pool, where commissions are paid mainly at the shipping pool level, the entire period in the nine months ended September 30, 2006 but only three months during the same period in 2005.

Voyage expenses. Voyage expenses for the nine-month period ended September 30, 2006 were \$1.0 million related to expenses for certain voyage charters. For the nine months ended September 30, 2005 voyage expenses amounted to \$0.1 million. In the first nine months of 2006, a greater portion of our fleet operated under voyage charter contracts, where we pay for the voyage expenses. Still, the majority of our fleet operates under time charter

contracts, and thus the voyage expenses represent only 3.4% of voyage revenues during the nine month period ended September 30, 2006 versus 0.4% for the same period in 2005.

Vessel operating expenses. Vessel operating expenses were \$7.6 million for the nine-month period ended September 30, 2006. Daily vessel operating expenses per vessel were \$3,519 per day. For the same period in 2005, vessel operating expenses were \$6.3 million, or \$3,309 per day.

Management fees. These are the fees we pay to Eurobulk under our subsidiaries' management agreements and our master management agreement with Eurobulk. As of September 30, 2006, Eurobulk charged us €610 (or \$797.9, based on a \$/€ exchange rate of 1.308 as of December 18, 2006) per day per vessel totaling \$1.6 million for the period, or \$761 per day per vessel. For the same period in 2005, management fees amounted to \$1.4 million, or \$749 per day per vessel based on a daily rate per vessel of €590. The daily rate in Euros was adjusted for inflation on February 1, 2006 to €610 per day per ship according to the management agreement with Eurobulk.

General and administrative expenses. These are expenses we pay as part of our operation as a public company and include the fixed portion of our management agreement fees, legal and auditing fees, directors and officers liability insurance and other miscellaneous corporate expenses. During the nine month period ended September 30, 2006 we had a total of \$0.8 million of general and administrative expenses; during the same period in 2005, we had general and administrative expenses of \$0.1 million.

Depreciation and amortization. Depreciation and amortization for the nine-month period ended September 30, 2006 was \$5.0 million. This consists of \$4.2 million of depreciation of vessels and \$0.8 million of amortization of deferred drydocking expenditures. Comparatively, depreciation and amortization for the same period in 2005 amounted to \$1.8 million and \$1.0 million, respectively, for a total of \$2.8 million. Depreciation in the nine month period to September 30, 2006 was higher than in the same period in 2005 due to the greater number of vessels in our fleet and the larger book value of the vessel acquired. Amortization for the nine month period to September 30, 2006 is lower than the same period in 2005 due to lower capitalized drydocking expenses. Our three vessel acquisitions between September 30, 2005 and September 30, 2006 had no capitalized drydocking expenses subject to amortization for the nine month period ended September 30, 2006 and, in addition, m/v *Pantelis P* and m/v *John P* were sold on May 31, 2006 and July 5, 2006 respectively.

Gain from vessel sale. There were two vessels sales in the nine months ended September 30, 2006. The m/v *Pantelis P* and m/v *John P* were sold on May 31, 2006 and July 5, 2006, respectively realizing a gain on sale of \$4.4 million. During the same period in 2005, there were no vessel sales.

Interest and finance costs, net. Interest and finance costs, net for the nine-month period ended September 30, 2006 were \$1.5 million. Of this amount, \$2.3 million relates to interest incurred and loan fees and expenses paid and deferred loan fees written-off during the period, partly offset by \$0.7 million of interest income during the period. Comparatively, during the same period in 2005, net interest and finance costs amounted to \$0.9 million, comprised of \$1.1 million of interest incurred and loan fees and offset by \$0.2 million of interest income. Interest incurred and loan fees were higher in the nine-months ended September 30, 2006 due to higher loan amounts outstanding as a result of the new loans undertaken in May 2005, December 2005, June 2006 and September 2006 to recapitalize the Company and for vessel acquisitions.

Derivative and foreign exchange gains or losses. There were no derivative gains or losses in the period ended September 30, 2006 and only a small foreign exchange loss of \$1,064. During the same period in 2005, we had a derivative loss due to an interest rate swap on a notional amount of \$5.0 million of \$0.1 million and foreign exchange gains of \$539.

Net income. As a result of the above, net income for the nine month period ended on September 30, 2006 was \$15.3 million compared to \$20.5 million for the same period in 2005, representing a decrease of 25.4%.

Year Ended December 31, 2005 Compared to Year Ended December 31, 2004.

Voyage revenues. Voyage revenues for the period were \$44.5 million, down 2.6% compared to the same period in 2004 during which voyage revenues amounted to \$45.7 million. The decrease was primarily due to the lower charter rates our vessels achieved, the fact that we operated on average fewer vessels compared to the same period in 2004 (on average 7.1 vessels in 2005 versus 7.3 vessels in 2004) and the lower utilization rate of our available days (98.5% in 2005 compared to 99.5% in 2004). Our fleet of 7.1 vessels had throughout the period 38 unscheduled

off-hire days, primarily due to an unscheduled repair for m/v *Ariel*, and 45 days of scheduled off-hire for the drydocking of m/v *Irini* and m/v *John P*, generating an average TCE rate per vessel of \$17,643 per day compared to \$17,839 per day per vessel for the same period in 2004. The average TCE rate our vessels achieve is a combination of the period charter rate earned by our vessels under period charter contracts, which is not influenced by market developments, and the TCE rate earned by our vessels employed in the spot market which is influenced by market developments. Shipping markets weakened in the second half of 2005 influencing a portion of the TCE earned by some of our vessels.

Commissions. Commissions for the period were \$2.4 million. At 5.4% of voyage revenues, commissions were higher than in the same period in 2004. For the year ended December 31, 2004, commissions amounted to \$2.2 million, or 4.8% of voyage revenues. The higher level of commissions in 2005 is due to the fact that fewer vessels operated in shipping pools (where commissions are paid by the shipping pool thus reducing the commissions paid by us).

Voyage expenses. Voyage expenses for the year were \$0.7 million related to expenses for certain voyage charters. For the year ended December 31, 2004, voyage expenses amounted to \$0.4 million. Because our vessels are generally chartered under time charter contracts, voyage expenses represent a small fraction of voyage revenues. In 2005, we had more voyage charters than in 2004, which resulted in higher voyage expenses.

Vessel operating expenses. Vessel operating expenses were \$8.6 million for the period compared to \$8.9 million for the same period in 2004. This difference was due to the lower average number of vessels we operated in 2005, specifically an average of 7.1 vessels in 2005 compared to 7.3 vessels in 2004. Daily vessel operating expenses per vessel were rather stable between the two periods at \$3,322 per day in 2005 compared to \$3,327 per day in 2004.

Management fees. These are the fees we pay to Eurobulk under our subsidiaries' management agreements with Eurobulk. As of December 31, 2005, Eurobulk charged us €590 (or \$738) per day per vessel totaling \$1.9 million for the period, or \$738 per day per vessel. For the same period in 2004, management fees amounted to \$2.0 million, or \$737 per day per vessel based on the same daily rate per vessel of €590. The Euro exchange rate has been on average the same during 2005 and 2004. The increase in the management fees paid in 2005 also resulted from an increase in the average number of vessels we owned during the period. In 2005, we owned 7.4 vessels compared to an average of 7.1 vessels we owned during 2004.

General and administrative expenses. These are expenses we pay as part of our operation as a public company and include the fixed portion of our management agreement fees, legal and auditing fees, directors' and officers' liability insurance and other miscellaneous corporate expenses. During 2005, we had a total of \$0.4 million of general and administrative expenses incurred in the second half of the year. We had no such expenses during 2004.

Depreciation and amortization. Depreciation and amortization for the period was \$4.2 million. This consists of \$2.7 million of depreciation of vessels and \$1.6 million of amortization of deferred drydocking expenditures. Comparatively, depreciation and amortization for the same period in 2004 amounted to \$2.5 million and \$0.9 million, respectively, for a total of approximately \$3.5 million. Depreciation in 2005 is higher than in 2004 despite the lower average number of vessels because the depreciation associated with m/v *Artemis* which was bought in November 2005 was higher than the corresponding depreciation of m/v *Widar* which was sold in April 2004. Amortization for 2005 is higher than the same period in 2004 due to the amortization of additional drydocking expenditures incurred in 2004 and 2005.

Gain from vessel sale. There were no vessel sales in the year ended December 31, 2005. In 2004, m/v *Widar* was sold on April 24 for a gain on sale of \$2.3 million.

Interest and finance costs, net. Interest and finance costs, net for the period were \$1.0 million. Of this amount, \$1.5 million relates to interest incurred and loan fees and expenses paid and deferred loan fees written-off during the period, offset by \$0.5 million of interest income during the period. Comparatively, during the same period in 2004, net

interest and finance costs amounted to \$0.5 million, comprised of \$0.7 million of interest incurred and loan fees and offset by \$0.2 million of interest income. Interest incurred and loan fees are higher in 2005 due to the higher loan amount outstanding as a result of the new loans undertaken in May 2005 and December 2005.

Derivative and foreign exchange gains or losses. During the period, we had a derivative loss of \$0.1 million due to an interest rate swap on a notional amount of \$5.0 million, and foreign exchange gains of \$538. In the same

period in 2004, there was a net derivative gain of \$27,029 (same interest rate swap) and foreign exchange losses of less than \$1,808.

Net income. As a result of the above, net income for the year ended on December 31, 2005 was \$25.2 million compared to \$30.6 million for the same period in 2004, representing a decrease of 17.7%.

Year Ended December 31, 2004 Compared to Year Ended December 31, 2003.

Voyage revenues. Voyage revenues for the year ended December 31, 2004 were \$45.7 million, up 76.2%, compared to \$26.0 million for the year ended December 31, 2003. Results for 2004 reflect contributions from m/v *Widar* up to April 24, as the vessel was sold on that day. Our fleet operated throughout the period, with less than 12 unscheduled off-hire days and about 123 days of scheduled drydocking resulting in a fleet utilization rate of 99.5% and averaging a TCE rate per vessel of \$17,839 per day. The corresponding fleet utilization and average TCE equivalent for the year ended December 31, 2003 are 99.3% and \$8,965 per vessel per day.

Commissions. Commissions in 2004 were \$2.2 million and amounted to 4.8% of voyage revenues. Commissions for 2003 were \$0.9 million amounting to 3.5% of voyage revenues. Commissions were higher as a percentage in 2004 than in 2003 due the fact that fewer vessels participated in shipping pools in 2004. Shipping pools pay most commissions before distribution of profits, and, thus the distribution to the shipping pool participants is net of third party commissions (we paid only commissions to Eurochart for our shipping pool derived revenues).

Voyage expenses. Voyage expenses in 2004 of \$0.4 million relate to expenses for certain voyage charters. Voyage expenses for 2003 were \$0.4 million.

Vessel operating expenses. Vessel operating expenses in 2004 were \$8.9 million reflecting the operation of an average of 7.3 vessels. Daily vessel operating expenses per vessel were \$3,327 per day, about 11.0% higher than daily vessel operating expenses for 2003 which were \$3,005. The increase is primarily due to higher insurance costs of \$98 per vessel per day, higher costs for spare parts and consumable stores of \$87 per vessel per day and an increase of \$101 per vessel per day for crew and related expenses. The total operating expenses in 2003 were \$8.8 million reflecting the operation of 8 vessels for the full year.

Management fees. These are the fees we pay to Eurobulk under our subsidiaries management agreements with Eurobulk. Management fees in 2004 amounted to \$2.0 million (or \$737) per calendar day per vessel based on our contract rate of €590 per day and the prevailing exchange rate of U.S. Dollar to Euro. In 2003, management fees amounted to \$1.7 million (or \$590) per calendar day per vessel. The difference of the fee on a per day per vessel basis is primarily attributed to the fact that the management fee was changed from \$590 in 2003 to €590 per day per vessel in 2004, the different number of ship days and the U.S. Dollar to Euro exchange rate.

Depreciation and amortization. Depreciation and amortization in 2004 was \$3.5 million. As the vessel m/v *Widar* was sold in April 2004, the depreciation charge was reduced for the period after the sale of the vessel and amounted to \$2.5 million for the year. In 2004, we have revised upwards (from \$170/ton to \$300/ton) our estimate of the scrap price per lightweight ton, and, the expected life for m/v *Ariel* from 28 to 30 years (as it had gone through a special survey and was not expected to be sold before 2007). As a result, the depreciation charge was lower by \$1.4 million reflecting the above adjustments and, consequently, net income for the period was \$1.4 million higher or \$0.14 per share. Amortization of deferred drydock expenses for the period amounted to \$0.9 million, 55.0% higher than in 2003 due to additional drydocking expenditures during 2003 and 2004. Depreciation for 2003 was \$4.2 million while amortization of deferred drydocking costs was \$0.6 million.

Gain on vessel sale. m/v *Widar* was sold on April 24, 2004 for a net gain on sale of \$2.3 million. There were no vessel sales during 2003.

Interest and finance costs, net. Interest and finance costs, net in 2004 were \$0.5 million. Of this amount, \$0.7 million relates to interest incurred and loan fees and expenses paid and deferred loan fees written-off during the period offset by \$0.2 million of interest income during the period. Net interest expense for the period ended December 31, 2003 was \$0.8 million reflecting primarily lower interest income of \$0.4 million and higher interest incurred and loan fees of \$0.8 million.

Derivative and foreign exchange gains or losses. During the year ended December 31, 2004, we had a derivative gain due to an interest rate swap on a notional amount of \$5.0 million of \$27,029, and, foreign exchange

losses of \$1,808. In the year ended to December 31, 2003, there was no derivative exposure and foreign exchange losses of \$690.

Net income. Net income for the year ended December 31, 2004 was \$30.6 million compared to \$8.4 million for the year ended December 31, 2003, an increase of 263.3%.

Lack of Historical Operating Data for Vessels Before their Acquisition

Consistent with shipping industry practice, other than inspection of the physical condition of the vessels and examinations of classification society records, we do not conduct historical financial due diligence when we acquire vessels. Accordingly, we do not obtain the historical operating data for the vessels from the sellers because that information is not material to our decision to make acquisitions, nor do we believe it would be helpful to potential investors in our common shares in assessing our business or profitability. Most vessels are sold under a standard agreement, which, among other things, provides the buyer with the right to inspect the vessel and the vessel's classification society records. The standard agreement does not give the buyer the right to inspect, or receive copies of, the historical operating data of the vessel. Prior to the delivery of a purchased vessel, the seller typically removes from the vessel all records, including past financial records and accounts related to the vessel. In addition, the technical management agreement between the seller's technical manager and the seller is automatically terminated and the vessel's trading certificates are revoked by its flag state following a change in ownership.

Consistent with shipping industry practice, we treat the acquisition of a vessel (whether acquired with or without charter) as the acquisition of an asset rather than a business. Although vessels are generally acquired free of charter, we may acquire vessels with a period charter. Where a vessel has been under a spot charter, the vessel is delivered to the buyer free of charter, and it is rare in the shipping industry for the last charterer of the vessel in the hands of the seller to continue as the first charterer of the vessel in the hands of the buyer. In most cases, when a vessel is under spot charter and the buyer wishes to assume that charter, the vessel cannot be acquired without the charterer's consent and the buyer's entering into a separate direct agreement with the charterer to assume the charter. The purchase of a vessel itself does not transfer the charter, because it is a separate service agreement between the vessel owner and the charterer.

When we purchase a vessel and assume or renegotiate a related period charter, we must take the following steps before the vessel will be ready to commence operations:

- obtain the charterer's consent to us as the new owner;
- obtain the charterer's consent to a new technical manager;
- obtain the charterer's consent to a new flag for the vessel;
- arrange for a new crew for the vessel;
-

replace all hired equipment on board, such as gas cylinders and communication equipment;

-

negotiate and enter into new insurance contracts for the vessel through our own insurance brokers;

-

register the vessel under a flag state and perform the related inspections in order to obtain new trading certificates from the flag state;

-

implement a new planned maintenance program for the vessel; and

-

ensure that the new technical manager obtains new certificates for compliance with the safety and vessel security regulations of the flag state.

Liquidity and Capital Resources

Liquidity

As of September 30, 2006, we had a cash balance of \$14.1 million, funds due from related companies of \$1.2 million and \$1.4 million cash in restricted retention accounts. The \$1.2 million due from related companies represents advances to the manager of the fleet, Eurobulk, for operating expenses, management fees and executive services as per the management agreements.

Working capital is current assets minus current liabilities, including the current portion of long term debt. We have a working capital deficit of \$1.0 million including the current portion of long term debt which was \$14.4 million as of September 30, 2006. We consider our liquidity sufficient for our operations.

As of December 31, 2005, we had a cash balance of \$20.5 million plus restricted cash of \$1.1 million. The current portion of long term debt included in our current liabilities was \$14.4 million as of December 31, 2005. The working capital was \$6.9 million as of December 31, 2005. All of the \$46.9 million dividend declared was paid as of December 31, 2005.

As of December 31, 2004, we had a cash balance of \$15.5 million plus restricted cash of \$68,980. The current portion of long term debt included in our current liabilities was \$6.0 million as of December 31, 2004. The working capital was \$2.7 million as of December 31, 2004. All of the \$27.0 million dividend declared was paid as of December 31, 2004.

Net Cash from Operating Activities

Our net cash from operating activities for the nine months ended September 30, 2006 was \$15.7 million. This represents the net amount of cash, after expenses, generated by chartering our vessels. Eurobulk and another related party, on our behalf, collect our chartering revenues and pay our chartering expenses. This amount resulted from net income for the period of \$15.3 million, a reduction in the amount due from related parties of \$1.9 million, gain of \$4.4 million from the sale of m/v *Pantelis P* and m/v *John P* primarily offset by higher depreciation and drydocking expenses. In the same period in 2005, net cash flow from operating activities was a deficit of \$7.4 million. This amount is attributable to net income of \$20.5 million less an increase in the amount due from related parties of \$29.1 million offset by other changes in working capital.

Our net cash from operating activities for 2005 was \$20.6 million. This represents the net amount of cash, after expenses, generated by chartering our vessels. Eurobulk and another related party, on our behalf, collect our chartering revenues and pay our chartering expenses. Net income for the period was \$25.2 million, which was reduced by amounts due from related parties of \$7.6 million. The increase in the amounts due from related companies is primarily due to a payment of the amount due to related companies of \$4.6 million as of December 31, 2004 and advances to our fleet manager of funds to pay for all anticipated vessel expenses. In the same period in 2004, net cash flow from operating activities was \$34.2 million based on a contribution of net income of \$30.6 million.

Our net cash from operating activities during 2004 was \$34.2 million. This is primarily attributable to the favorable trading conditions which contributed net income of \$30.6 million, a gain of \$2.3 million from the sale of m/v *Widar* in April, deferred drydocking expenses of \$2.3 million, and, a further increase of funds due to related companies by \$3.5 million during the period. During 2003, net cash flow from operating activities was \$11.0 million, primarily attributable to net income of \$8.4 million.

Net Cash from Investing Activities

For the nine months ended September 30, 2006, net cash flow used in investing activities was \$25.6 million. We received net proceeds from the sale of m/v *Pantelis P* and m/v *John P* of \$9.2 million and had an increase of cash in retention accounts of \$0.3 million. At the same time we spent \$34.4 million for the purchase of m/v *Tasman Trader* and m/v *Aristides N.P.* resulting in a cash deficit from investment activities of \$25.6 million. During the same period in 2005, cash flow from investing activities amounted to a deficit of \$1.1 million reflecting an increase of cash in retention accounts.

During 2005, we purchased m/v *Artemis* for \$20.8 million and we had to put in retention accounts \$1.0 million to satisfy requirements of our new loan facilities for a total of funds used in investment activities of \$21.8 million. During 2004, cash flow from investing activities amounted to \$6.8 million contribution reflecting the sale of m/v

Widar in April 2004, while there were no investment activities in 2003 except a release of \$0.2 million of restricted funds.

Net Cash Used in Financing Activities

Net cash provided by financing activities for the nine-month period ended September 30, 2006 was \$3.4 million. This mainly relates to \$6.8 million of dividends paid, \$13.4 million of debt repayments and the drawdown

of \$23.8 million of new debt to partly finance the purchase of m/v *Tasman Trader* and m/v *Aristides N.P.* In the same period in 2005, net cash used in financing activities was \$1.8 million mainly related to a dividend and return of capital of \$44.2 million paid to shareholders on April 10, 2005 and May 15, 2005, and the net proceeds from re-financing long term debt and debt repayments of \$23.2 million.

In 2005, net cash provided by financing activities amounted to \$6.2 million. This relates primarily to proceeds from our Private Placement of \$18.6 million and net proceeds from long term debt of \$34.6 million offset by \$46.9 million consisting of dividends and return of capital and \$0.2 million in loan arrangement fees paid.

In 2004, net cash used in financing activities amounted to \$33.6 million reflecting dividend payments of \$27.0 million and repayment of debt of \$6.6 million related to the repayment of the balance of the loan of m/v *Widar* when the vessel was sold.

During 2003, net cash used in financing activities was \$4.8 million, reflecting primarily a dividend of \$1.2 million, repayment of long term debt of \$6.3 million and new debt incurred of \$3.0 million and a repayment of an advance from shareholders of \$0.3 million made in the prior year.

Capital Resources

Historically, our sources of funds have been equity provided by our shareholders, operating cash flows and long-term borrowings. Our principal use of funds has been capital expenditures to establish and expand our fleet, maintain the quality of our vessels, comply with international shipping standards and environmental laws and regulations, fund working capital requirements, make principal and interest payments on outstanding loan facilities, and pay dividends. Our main short term liability needs are to fund our vessel operations including the drydocking and special survey requirements of our vessels. We expect to rely on cash flows from operations and short term borrowings if necessary to cover our short term liquidity needs. We expect to rely upon funds raised from this offering, operating cash flows, long term borrowings, as well as future offerings to implement our growth plan and meet our liquidity needs going forward. In our opinion our working capital is sufficient for our present requirements and for the upcoming 12-month period.

Off-balance Sheet Arrangements

We do not and have never had any off-balance sheet arrangements.

Debt Financing

We operate in a capital intensive industry which requires significant amounts of investment, and we fund a major portion of this investment through long term debt. We maintain debt levels we consider prudent based on our market expectations, cash flow, interest coverage and percentage of debt to capital. During the nine month period ended on September 30, 2006, we repaid loans of \$13.4 million and drew down new loans of \$23.8 million.

As of September 30, 2006, after considering the loan repayments and new loan discussed in the preceding paragraph, we had six outstanding loans with a combined outstanding balance of \$58.9 million. As of December 31, 2006, we had seven outstanding loans with a combined outstanding balance of \$75.0 million. These loans have maturity dates between 2008 and 2013. Our long-term debt comprises bank loans granted to our vessel-owning subsidiaries.

Diana Trading Ltd. (our subsidiary and the owner of m/v *Irini*) entered into a loan agreement with HSBC Bank plc amounting to \$4.2 million which was drawn down on May 9, 2005. The loan is repayable in twelve consecutive quarterly installments consisting of four installments of \$0.45 each, and eight installments of \$0.3 million each, with the last installment due in May 2008. The first installment was paid in August 2005. The outstanding amount of this facility as of September 30, 2006 is \$2.1 million. The interest is calculated at LIBOR plus 1.25% per annum. Diana

Trading Ltd also has another credit facility with HSBC Bank plc with an outstanding balance of \$2.62 million to be repaid in 9 consecutive quarterly installments of \$0.22 million and a balloon payment of \$0.6 million along with the last installment.

Alcinoe Shipping Ltd (the owner of m/v *Pantelis P.*), Oceanpride Shipping Ltd. (the owner of m/v *John P.*), Searoute Maritime Ltd. (the owner of m/v *Ariel*) and Oceanopera Shipping Ltd. (the owner of m/v *Nikolaos P*) jointly and severally entered into a new eurodollar loan agreement with EFG Eurobank Ergasias S.A. amounting to

\$13.5 million which was drawn down on May 16, 2005. Prior to obtaining the loan, an amount of \$1.4 million was paid in settlement of the outstanding loans as at March 31, 2005 for Alcinoe Shipping Ltd. and Oceanpride Shipping Ltd. The new loan is repayable in twelve consecutive quarterly installments consisting of two installments of \$2.0 million each, one installment of \$1.5 million, nine installments of \$0.6 million each, and a balloon payment of \$2.6 million payable with the last installment in May 2008. The first installment was due in August 2005. Interest is calculated on LIBOR plus 1.5% per annum. As of September 30, 2006 the outstanding amount of this loan is \$5.1 million due to a repayment of \$1.5 million as a result of the sale of m/v *Pantelis P* and an additional \$1.5 million repayment as a result of the sale of m/v *John P*. The remaining amount of \$4.1 million will be repaid in seven consecutive quarterly installments of \$0.3 million each, with a balloon payment of \$2.0 million along with the last installment.

Allendale Investments S.A. (the owner of m/v *Kuo Hsiung*) and Alterwall Business Inc. (the owner of m/v *YM Qingdao1* (ex Kuo Jane)) jointly and severally entered into a loan agreement with Fortis Bank (Nederland) N.V. amounting to \$20.0 million when the outstanding amount of the old loans were \$3.6 million which was drawn down on May 26, 2005. The loan is repayable in twenty-four unequal consecutive quarterly installments of \$1.5 million each in the first year, \$1.125 million each in the second year, \$0.775 million in the third year, \$0.45 million each in the fourth through the sixth years and a balloon payment of \$1.0 million payable with the last installment in May 2011. The interest is calculated at LIBOR plus 1.25% per annum as long as the outstanding amount remains below 60% of the fair market value (FMV) of the vessel and 1.375% if the outstanding amount is above 60% of the FMV of the vessel. The outstanding portion of this loan as of September 30, 2006 is \$12.875 million.

Salina Shipholding Corp. (the owner m/v *Artemis*) entered into a loan agreement with Calyon Bank under which it borrowed \$15.5 million on December 28, 2005. The loan is payable in ten consecutive semi-annual installments starting in June 2006 consisting of six installments of \$1.75 million each and four installments of \$0.65 million each and a balloon payment of \$2.4 million payable with the final installment in December 2010. The interest is based on LIBOR plus a margin that ranges between 0.9 to 1.1%, depending on the asset coverage ratio. The outstanding amount of this loan as of September 30, 2006 is \$13.75 million.

Xenia International Corp. (the owner of m/v *Tasman Trader*) entered into a loan agreement with Fortis Bank N.V./S.A., Athens Branch under which it borrowed \$8.25 million on June 30, 2006. The loan is payable in twenty three consecutive quarterly installments consisting of \$0.265 million each beginning September 2006 and a balloon payment of \$2.155 million payable with the final installment in March 2012. The interest is based on LIBOR plus a margin of 0.95%. The outstanding amount of this loan as of September 30, 2006 is \$7.985 million.

Prospero Maritime Inc. (the owner of the m/v *Aristides N.P.*) entered into a loan agreement with Calyon Bank under which it borrowed \$15.5 million on September 4, 2006. The loan is payable in 14 consecutive semi-annual installments in the following amounts: (a) in the case of the first and second installments, \$1.2 million each; (b) in the case of the third installment, \$1.0 million; (c) in the case of the fourth to fourteenth installments, \$0.825 million, and a balloon payment payable together with the 14th installment in the amount of \$3.025 million. The first installment is paid in March 2007. The interest is based on LIBOR plus a margin that ranges between 0.9-1.1%, depending on the asset cover ratio.

Xingang Shipping Ltd. (the owner of the m/v *YM Xingang I*) entered into a loan agreement with HSBC Bank plc under which it borrowed \$20.0 million on November 15, 2006. The loan is payable in eight consecutive quarterly installments of \$1.0 million each beginning February 2007, followed by four consecutive quarterly installments of \$750,000 each, followed by sixteen consecutive installments of \$250,000 each and a balloon payment of \$5.0 million payable with the last installment in November 2013. The interest is based on LIBOR plus a margin of 0.935%.

The loan agreements contain various covenants, including restrictions as to changes in management and ownership of the vessels, distribution of dividends or any other distribution of profits or assets, additional indebtedness and mortgaging of vessels without the lender's prior consent, the sale of vessels, as well as minimum requirements

regarding the hull insurance ratio cover. We are not in default of any credit facility covenant.

Dividend Policy

Our Board of Directors has adopted a policy to declare a regular minimum quarterly dividend of \$0.22 per share to shareholders each May, August, November and February provided there are sufficient funds as determined by the Board of Directors. Any excess cash flow may be used to pay additional dividends, fund our growth or repay

Company debt. On January 8, 2007 we declared a dividend on our common stock in the amount of \$0.22 per share for the results of operations for the three-month period ended December 31, 2006, which is payable on or about February 15, 2007 to all common shareholders of record as of January 29, 2007. We expect to declare our next dividend in May 2007.

The timing and amount of dividend payments will be dependent upon our earnings, financial condition, cash requirement and availability, restrictions in its loan agreements, growth strategy, charter rates in the drybulk and container shipping industry, the provisions of Marshall Islands law affecting the payment of distributions to shareholders and other factors, such as the acquisition of additional vessels. The payment of dividends is not guaranteed or assured, and may be discontinued at any time at the discretion of our Board of Directors.

Tabular Disclosure of Contractual Obligations

Contractual Obligations and Commitments

Contractual obligations are set forth in the following table as of December 31, 2006:

(In thousands)	Total	Less Than One Year	One to Three Years	Three to Five Years	More Than Five Years
Bank debt	\$ 74,950	\$ 18,040	\$ 26,345	\$ 14,820	\$ 15,745
Interest Payment ⁽¹⁾	\$ 14,466	\$ 4,469	\$ 5,604	\$ 3,016	\$ 1,377
Management fees, vessels ⁽²⁾	\$ 12,283	\$ 2,441	\$ 5,065	\$ 4,777	\$
Management fees, executive services ⁽³⁾	2,670	527	1,109	1,034	

(1)

Assuming the amortization of the loan described above and an estimated average effective LIBOR of 5.5% for all the periods shown in the table and margin over LIBOR ranging from 90 basis points to 160 basis points as the case for each loan might be.

(2)

Refers to our obligation for our subsidiaries management fees of €610 per day per vessel (or \$797.9) as adjusted on February 1, 2006 to account for inflation in Greece during 2005, and as further adjusted annually for inflation on February 1 of each year, for the nine vessels owned by Euroseas at December 30, 2006 under our five-year management contract. We have assumed no change in the number of vessels other than the delivery of m/v *Ariel* to its buyers on February 15, 2007, an inflation rate of 3.5% per year and no changes in this U.S. Dollar to Euro exchange rate.

(3)

Refers to our obligation to acquire executive services from Eurobulk Ltd. for our positions of CEO, CFO and Secretary under our new 5-year management agreement as of October 1, 2006. We pay an annual fee of \$517,500 up to July 1, 2007; from then on, the fee will be adjusted every July 1st based on Greek inflation the previous calendar year. We have assumed a 3.5% annual inflation for the remaining term of the agreement.

Contractual obligations are set forth in the following table as of September 30, 2006:

(In thousands)	Total	Less Than One Year	One to Three Years	Three to Five Years	More Than Five Years
Bank debt	\$ 58,910	\$ 14,390	\$ 21,590	\$ 13,920	\$ 9,010
Interest Payment ⁽¹⁾	\$ 11,002	\$ 3,569	\$ 4,429	\$ 2,271	\$ 734
Management fees, vessels ⁽²⁾	\$ 12,785	\$ 2,384	\$ 5,022	\$ 5,379	\$
Management fees, executive services ⁽³⁾	2,799	522	1,100	1,178	

(1)

Assuming the amortization of the loan described above and an estimated average effective LIBOR of 5.5% for all the periods shown in the table and margin over LIBOR ranging from 90 basis points to 160 basis points as the case for each loan might be.

(2)

Refers to our obligation for our subsidiaries' management fees of €610 per day per vessel (or \$797.9), as adjusted annually for inflation, for the eight vessels owned by Euroseas at September 30, 2006 under our new master management agreement as of October 1, 2006. We have assumed no change in the number of vessels, an inflation rate of 3.5% per year and no changes in this U.S. Dollar to Euro exchange rate.

(3)

Refers to our obligation to acquire executive services from Eurobulk Ltd. for our positions of CEO, CFO and Secretary under our new 5-year management agreement as of October 1, 2006. We pay an annual fee of \$517,500 up to July 1, 2007; from then on, the fee will be adjusted every July 1st based on Greek inflation the previous calendar year. We have assumed a 3.5% annual inflation for the remaining term of the agreement.

Contractual obligations are set forth in the following table as of December 31, 2005:

(In thousands)	Total	Less Than One Year	One to Three Years	Three to Five Years	More Than Five Years
Bank debt	\$ 48,560	\$ 14,430	\$ 23,630	\$ 8,600	\$ 1,900
Interest Payment ⁽¹⁾	\$ 7,242	\$ 2,910	\$ 3,215	\$ 1,061	\$ 57
Management fees, vessels ⁽²⁾	\$ 10,645	\$ 2,405	\$ 5,065	\$ 3,175	
Management fees, executive services ⁽³⁾	2,431	509	1,072	851	

(1)

Assuming the amortization of the loan described above and an estimated average effective interest rate based on an underlying assumption for LIBOR of 5.50% and margin over LIBOR ranging from 110 basis points to 160 basis points as the case for each loan might be.

(2)

Refers to our obligation for management fees of €590 (approximately \$771.7 based on a U.S. Dollar exchange rate of €1.00 = U.S.\$1.308 as in effect on December 18, 2006) for the eight vessels owned by Euroseas at December 31, 2005 under our management agreements at the time, which expire on January 31, 2010. We have assumed no changes in the number of vessels, an inflation rate of 3.5% per year and no changes in this US Dollar to Euro exchange rate.

(3)

Refers to our obligation to acquire executive services from Eurobulk Ltd. for our positions of CEO, CFO and Secretary under a 5-year executive services agreement starting on July 1, 2005. We pay \$500,000 per year for these services annually adjusted for Greek inflation every July 1st. On July 1, 2006 the annual fee was adjusted by 3.5% to \$517,500. We have assumed annual increase of 3.5% every July 1 thereon.

Quantitative and Qualitative Disclosures about Market Risk

In the normal course of business, we face risks that are non-financial or non-quantifiable. Such risks principally include country risk, credit risk and legal risk. Our operations may be affected from time to time in varying degrees by these risks but their overall effect on us is not predictable. We have identified the following market risks as those which may have the greatest impact upon our operations:

Interest Rate Fluctuation Risk

The international drybulk and container shipping industry is a capital intensive industry, requiring significant amounts of investment. Much of this investment is provided in the form of long term debt. Our debt usually contains interest rates that fluctuate with LIBOR. We do not use financial instruments such as interest rate swaps to manage the impact of interest rate changes on earnings and cash flows and increasing interest rates could adversely impact future earnings.

As at September 30, 2006, we had \$58.9 million of floating rate debt outstanding with margins over LIBOR ranging from 0.90% to 1.60%. Our interest expense is affected by changes in the general level of interest rates. As an indication of the extent of our sensitivity to interest rate changes, an increase of 100 basis points would have decreased our net income and cash flows in the three-month period to September 30, 2006 by approximately \$0.1 million assuming that the current debt level was the same throughout the quarter.

In March of 2004, we entered into an interest rate swap agreement on a notional amount of \$3.0 million. Under this swap agreement, we receive interest based on the 3-month LIBOR rate and we pay based on 1.10% fixed rate if the 1-year LIBOR remains below 4.02%; otherwise we pay the 1-year LIBOR rate. This agreement was terminated in October 2005.

The following table sets forth the impact on interest expense of a 100 basis points increase in LIBOR during the next five years:

Twelve Months Ended September 30,	Amount (thousand US\$)
2007	\$ 507
2008	399
2009	277
2010	211
2011 and thereafter	253

On November 15, 2006, we drew down \$20.0 million under our loan agreement to finance our acquisition of m/v *YM Xingang I*. This increased the impact on interest expense of a 100 basis point increases in LIBOR by approximately: \$142,500 until September 30, 2007; \$155,000 year ended September 30, 2008; \$117,000 year ended September 30, 2009; \$90,000 year ended September 30, 2010; and \$219,500 for 2011 and thereafter.

Foreign Exchange Rate Risk

The international drybulk and container shipping industry's functional currency is the U.S. dollar. We generate all of our revenues in U.S. dollars, but incur approximately 34% of our vessel operating expenses in currencies other than U.S. dollars. In addition, our management fee is denominated in euros (€590 per vessel per day in 2004 and 2005 and €610 or \$797.90 per vessel per day, adjusted annually for inflation, as of February 1, 2006). At September 30, 2006, approximately 33% of our outstanding accounts payable were denominated in currencies other than the U.S. dollar, mainly in Euros. We do not make use of currency exchange contracts to reduce the risk of adverse foreign currency movements but we believe that our exposure from market rate fluctuations is unlikely to be material. Net foreign exchange losses for the nine month period ending September 30, 2006 were \$1,064.

Inflation Risk

The general rate of inflation has been relatively low in recent years and as such its associated impact on costs has been minimal. We do not believe that inflation has had, or is likely to have in the foreseeable future, a significant impact on expenses. Should inflation increase, it will increase our expenses and subsequently have a negative impact on our earnings.

Critical Accounting Policies

The discussion and analysis of our financial condition and results of operations is based upon our consolidated condensed financial statements, which have been prepared in accordance with U.S. generally accepted accounting principles, or U.S. GAAP. The preparation of those financial statements requires us to make estimates and judgments that affect the reported amount of assets and liabilities, revenues and expenses and related disclosure of contingent assets and liabilities at the date of our financial statements. Actual results may differ from these estimates under different assumptions or conditions.

Critical accounting policies are those that reflect significant judgments or uncertainties, and potentially result in materially different results under different assumptions and conditions. We have described below what we believe are our most critical accounting policies that involve a high degree of judgment and the methods of their application.

Depreciation

We record the value of our vessels at their cost (which includes acquisition costs directly attributable to the vessel and expenditures made to prepare the vessel for its initial voyage) less accumulated depreciation. We depreciate our vessels on a straight-line basis over their estimated useful lives, estimated to range from 25 to 30 years from date of initial delivery from the shipyard. We believe that the 25 to 30 year range of depreciable life is consistent with that of other shipowners. We use a depreciable life of 25 years for all of our vessels except one which has already reached an age of 30 years and continues to be employed. This vessel, m/v *Ariel*, is fully depreciated and carried no depreciation charge in 2004, 2005 or the first nine months ended September 30, 2006. Depreciation is based on cost less the estimated residual scrap value. In 2004, the estimated scrap value of the vessels was increased from \$170 to \$300 per lightweight ton to better reflect market price developments in the scrap

metal market. An increase in the useful life of the vessel or in the residual value would have the effect of decreasing the annual depreciation charge and extending it into later periods. A decrease in the useful life of the vessel or in the residual value would have the effect of increasing the annual depreciation charge.

Deferred Drydock Costs

Our vessels are required to be drydocked approximately every 30 to 60 months for major repairs and maintenance that cannot be performed while the vessels are trading. We capitalize the costs associated with drydockings as they occur and amortize these costs on a straight-line basis over the period between drydockings. Costs capitalized as part of the drydocking include actual costs incurred at the drydock yard cost of hiring riding crews to perform specific tasks determined by us in accordance with the requirements of the classification society in connection with the drydocking and parts used in performing such tasks, cost of travel, lodging and subsistence of our personnel sent to the drydocking site to supervise and the cost of hiring a third party to oversee a drydocking. We believe that these criteria are consistent with industry practice and that our policy of capitalization reflects the economics and market values of the vessels. Commencing January 1, 2006, we have revised our policy to exclude the cost of hiring riding crews and the cost of parts used by riding crews from amounts capitalized as drydocking cost. We have not restated any historical financial statements because we determined that the impact of such a revision is not material to our operating income and net income for any periods presented.

Impairment of Long-lived Assets

We evaluate the carrying amounts and periods over which long-lived assets are depreciated to determine if events have occurred which would require modification to their carrying values or useful lives. In evaluating useful lives and carrying values of long-lived assets, we review certain indicators of potential impairment, such as undiscounted projected operating cash flows, vessel sales and purchases, business plans and overall market conditions. We determine undiscounted projected net operating cash flows for each vessel and compare it to the vessel carrying value. In the event that impairment occurred, we would determine the fair value of the related asset and we record a charge to operations calculated by comparing the asset's carrying value to the estimated fair market value. We estimate fair market value primarily through the use of third party valuations performed on an individual vessel basis.

Recent Accounting Pronouncements

In January 2003, the Financial Accounting Standards Board (FASB) issued FIN 46, Consolidation of Variable Interest Entities, which clarified the application of Accounting Research Bulletin No. 51, Consolidated Financial Statements, to address perceived weaknesses in accounting for entities commonly known as special-purpose or off-balance sheet entities. It provides guidance for identifying the party with a controlling financial interest resulting from arrangements or financial interests rather than voting interests. It requires consolidation of Variable Interest Entities (VIEs) only if those VIEs do not effectively disperse the risks and benefits among the various parties involved. On December 24, 2003, the FASB issued a complete replacement of FIN 46 (FIN 46R), which clarified certain complexities of FIN 46. FIN 46R is applicable for financial statements issued for reporting periods that end after March 5, 2004. The Company has reviewed FIN 46R and determined that the adoption of the standard does not have a material impact on the financial statements.

In December 2004, the FASB issued SFAS No. 123 (revised 2004), Share Based Payments (SFAS 123R). This statement eliminates the option to apply the intrinsic value measurement provisions of Accounting Principles Board (APB) Opinion No. 25, Accounting for Stock Issued to Employees to stock compensation awards issued to employees. Rather, SFAS 123R requires companies to measure the cost of employee services received in exchange for an award of equity instruments based on the grant-date fair value of the award. That cost will be recognized over the period during which an employee is required to provide services in exchange for the award-the requisite service period (usually the vesting period). SFAS No. 123R applies to all awards granted after the required effective date, as of the beginning of the first interim or annual reporting period that begins after June 15, 2005, and to awards modified,

repurchased, or cancelled after that date. SFAS 123R will be effective for our fiscal year 2006. The Company does not anticipate that the implementation of this standard does not have a material impact on its financial position, results of operations or cash flows.

On December 16, 2004, FASB issued SFAS No. 153, Exchanges of Non-monetary Assets, an amendment of APB Opinion No. 29, Accounting for Non-monetary Transactions (FAS 153). This statement amends APB

Opinion No. 29 to eliminate the exception for non-monetary exchanges of similar productive assets and replaces it with a general exception for exchanges of non-monetary assets that do not have commercial substance. Under SFAS No. 153, if a non-monetary exchange of similar productive assets meets a commercial-substance criterion and fair value is determinable, the transaction must be accounted for at fair value resulting in recognition of any gain or loss. SFAS No. 153 is effective for non-monetary transactions in fiscal periods that begin after June 15, 2005. The Company does not anticipate that the implementation of this standard does not have a material impact on its financial position, results of operations or cash flows.

FASB has issued SFAS No. 154, Accounting Changes and Error Corrections, a replacement of APB Opinion No. 20 and SFAS No. 3. The Statement applies to all voluntary changes in accounting principle, and changes the requirements for accounting for and reporting of a change in accounting principle.

SFAS No. 154 requires retrospective applications to prior periods financial statements of a voluntary change in accounting principle unless it is impracticable. APB Opinion No. 20 previously required that most voluntary change in accounting principle be recognized by including in net income of the period of the change the cumulative effect of changing to the new accounting principle. SFAS No. 154 improves financial reporting because its requirements enhance the consistency of financial information between periods. The Company is analyzing the effect which this pronouncement will have on its financial condition, statement of operations, and cash flows. This statement is effective for the Company on January 1, 2006. The statement did not have an effect on the Company's financial condition, results of operation or cash flows.

In February 2006, the FASB issued SFAS No. 155, Accounting for Certain Hybrid Financial Instruments. This Statement amends SFAS No. 133, Accounting for Derivative Instruments and Hedging Activities, and SFAS No. 140, Accounting for Transfers and Servicing of Financial Assets and Extinguishments of Liabilities and resolves issues addressed in Statement 133 Implementation Issue No. D1, Application of Statement 133 to Beneficial Interests in Securitized Financial Assets.

SFAS No. 155 permits fair value re-measurement for any hybrid financial instruments that contains an embedded derivative that otherwise would require bifurcation and clarifies which interest-only strips and principal-only strips are not subject to the requirements of SFAS No. 133. SFAS No. 155 establishes a requirement to evaluate interests in securitized financial assets to identify interests that are freestanding derivatives or that are hybrid financial instruments that contain an embedded derivative requiring bifurcation. SFAS No. 155 also clarifies that concentrations of credit risk in the form of subordination are not embedded derivatives and amends SFAS No. 140 to eliminate the prohibition on a qualifying special purpose entity from holding a derivative financial instrument that pertains to a beneficial interest other than another derivative financial instrument.

SFAS No. 155 is effective for all financial instruments acquired or issued after the beginning of an entity's first fiscal year that begins after September 15, 2006. The Company has not completed the study of what effect SFAS No. 155 will have on its financial position and results of operations.

On March 29, 2005, the SEC released a Staff Accounting Bulletin (SAB) relating to the FASB accounting standard for stock options and other share-based payments. The interpretations in SAB No. 107, Share-Based Payment, (SAB 107) express views of the SEC Staff regarding the application of SFAS No. 123 (revised 2004), Share-Based Payment (Statement 123R). Among other things, SAB 107 provides interpretive guidance related to the interaction between Statement 123R and certain SEC rules and regulations, as well as provides the Staff's views regarding the valuation of share-based payment arrangements for public companies. The Company does not anticipate that adoption of SAB 107 will have any effect on its financial position, results of operations or cash flows.

In March 2005, the FASB issued FASB Interpretation No. (FIN) 47 Accounting for Conditional Asset Retirement Obligations, an interpretation of FASB Statement No. 143, which clarifies the term conditional asset retirement obligation as used in SFAS No. 143 Accounting for Asset Retirement Obligations. Specifically, FIN 47 provides that

an asset retirement obligation is conditional when either the timing and (or) method of settling the obligation is conditioned on a future event. Accordingly, an entity is required to recognize a liability for the fair value of a conditional asset retirement obligation if the fair value of the liability can be reasonably estimated. Uncertainty about the timing and (or) method of settlement of a conditional asset retirement obligation should be factored into the measurement of the liability when sufficient information exists. This interpretation also clarifies when an entity would have sufficient information to reasonably estimate the fair value of an asset retirement obligation. FIN 47 is effective for fiscal years ending after December 15, 2005. This statement did not have an impact on the Company's financial position and results of operations.

In March 2006, the FASB issued SFAS No. 156 Accounting for Servicing of Financial Assets an amendment of FASB Statement No. 140. The Statement provides a single definition of fair value, together with a framework for measuring it, and requires additional disclosure about the use of fair value to measure assets and liabilities. Statement 157 also emphasizes that fair value is a market-based measurement, not an entity-specific measurement, and sets out a fair value hierarchy with the highest priority being quoted prices in active markets. Under the Statement, fair value measurements are disclosed by level within that hierarchy. The Statement is effective for financial statements issued for fiscal years beginning after November 15, 2007, and interim periods within those fiscal years. This statement will be effective for the Company on January 1, 2008. The Company does not believe that this pronouncement will have an effect on its financial position, results of operations or cash flows.

In September 2006, the FASB issued SFAS No. 157 Fair Value Measurements. This Statement defines fair value, establishes a framework for measuring fair value in generally accepted accounting principles (GAAP), and expands disclosures about fair value measurements. This Statement applies under other accounting pronouncements that require or permit fair value measurements, the FASB having previously concluded in those accounting pronouncements that fair value is the relevant measurement attribute. Accordingly, this Statement does not require any new fair value measurements. However, for some entities, the application of this Statement will change current practice. This Statement is effective for financial statements issued for fiscal years beginning after November 15, 2007, and interim periods within those fiscal years. This statement will be effective for the Company on January 1, 2008. The Company does not believe that this pronouncement will have an effect on its financial position, results of operations or cash flows.

On September 13, 2006, the SEC released SAB No. 108, which provides guidance on materiality. SAB No. 108 states that registrants should use both a balance sheet (iron curtain) approach and an income statement (rollover) approach when quantifying and evaluating the materiality of a misstatement, contains guidance on correcting errors under the dual approach, and provides transition guidance for correcting errors existing in prior years. If prior-year errors that had been previously considered immaterial (based on the appropriate use of the registrant's prior approach) now are considered material based on the approach in the SAB, the registrant need not restate prior period financial statements. SAB No. 108 is effective for annual financial statements covering the first fiscal year ending after November 15, 2006. This statement will be effective for the Company for the fiscal year ending December 31, 2006. The Company is currently evaluating the effect that adoption of SAB No. 108 will have on its financial position and results of operations.

THE INTERNATIONAL DRYBULK AND CONTAINER SHIPPING INDUSTRY

The information and data in this section relating to the international drybulk and container shipping industry has been provided by Maritime Strategies International Ltd., or MSI, and is taken from MSI databases and other sources available in the public domain. MSI has advised us that it accurately describes the international drybulk and container shipping industry, subject to the availability and reliability of the data supporting the statistical and graphical information presented. MSI's methodologies for collecting information and data, and therefore the information discussed in this section, may differ from those of other sources, and does not reflect all or even necessarily a comprehensive set of the actual transactions occurring in the drybulk and container shipping industry.

Trends in the International Drybulk Shipping Market

Introduction

Overview

The international drybulk shipping industry provides seaborne transportation of drybulk commodities for related industries. The most important of these commodities are iron ore, coal and grains which together account for an estimated 75% of total trade. Other key cargoes, commonly referred to as minor bulks, include agricultural products (e.g. fertilizers), steel products, forest products, metals, cement and a wide range of other minerals. Shipping companies provide seaborne transportation to customers that include power utilities, steelmakers, grain houses, commodity traders and government agencies. In recent years there has been a substantial increase in the use of commodities transported in drybulk. In 2005, the amount of cargo transported by the industry was estimated to have exceeded 2.2 billion metric tons – an increase of over 9% over the previous year and almost 30% since 2000.

Freight

This is the primary source of revenue to a shipping company. The freight rate of transporting drybulk commodities can be volatile and is related to demand for and supply of drybulk carriers. Demand for vessels is influenced by many factors, but particularly by economic activity and changes in production, consumption, inventories and prices of the commodities mentioned above and their substitutes (if any). The distances over which commodities are transported is also a key determinant of shipping demand. Drybulk carrier supply is influenced by newbuildings (or additions to the existing fleet), the scrapping of older vessels, the drydocking (for maintenance or storage) of existing bulk carriers and other efficiency factors such as port delays and the speed at which vessels travel.

Freight is paid when a customer charters a vessel for a specified period of time or to carry a specific cargo. The charter market is highly competitive as shipping companies compete on the offered freight rate, the location, technical specification and quality of the vessel and the reputation of the vessel's manager. Typically, the contractual agreement between the shipping company and the customer, known as a charterparty, is based on standard industry terms.

A vessel is usually chartered under a voyage charter or a time charter. A voyage charter is a contract to carry a specific cargo between two ports for an agreed rate per ton of cargo carried. Under voyage charters, the shipowner pays voyage expenses such as port, canal and fuel costs. A time charter is a contract to charter a vessel for an agreed period of time at a set daily rate. Under time charters, the charterer pays for the voyage expenses and decides what ports the vessel should go. A spot charter is a voyage charter or a time charter that is fixed for just one trip. A period charter is a longer term time charter. Of course, a vessel can carry cargoes on behalf of its own owner like in a case of a steel mill, or, in case its owner has secured a cargo transportation contract (Contract or Affreightment or COA). Variations of the above mentioned employment types are bareboat charters or shipping pools (please refer to Glossary of Shipping Terms for definitions).

Fleet Ownership

International seaborne drybulk transportation services are primarily provided by independent shipowners, in contrast to the tanker industry where many oil companies also have their own fleets. As a result ownership of the fleet is highly fragmented, with no single shipowner controlling more than 5% of the global drybulk carrier fleet.

The size of a drybulk carriers can be from several hundred tons of cargo carrying capacity (deadweight tons or dwt) to 300,000 dwt or more. The oceangoing fleet is considered to be from 10,000 dwt and up as smaller vessels are generally employed in local trades. The drybulk carriers are generally grouped in 4 size sectors: Capesize, from 80,000 dwt and above; Panamax, from 60,000 to 79,999 dwt; Handymax, from 40,000 to 59,999 dwt, and, Handysize, from 10,000 to 39,999 dwt.

Drybulk Carrier Demand

Overview

The amount of cargo transported in drybulk carriers is governed by demand for the various commodities, which is affected by international economic activity, regional imbalances between domestic production and consumption, commodity prices and inventories. In addition to the volume of cargo, drybulk carrier demand is driven by the average distance required to transport it from commodity-producing locations to commodity-consuming destinations. Demand can be expressed in ton-miles , measured as the product of (a) the amount of cargo transported, multiplied by (b) the distance over which it is transported.

The mile component is generally the most variable element of ton-mile demand. Seaborne trading distances for commodities are determined principally by the location of production and their efficient distribution for processing and consumption. To illustrate the importance of this consider that a ton of ore carried from Brazil to China generates roughly 2 to 3 times the demand for sea transport as the same amount of ore shipped from Australia. Trading patterns are sensitive both to major geopolitical events and to small shifts, imbalances and disruptions in all stages of production and processing through to end-use. Seaborne transportation distances are also influenced by infrastructural factors, such as the availability of canal shortcuts and capacity at ports and inland distribution. The following chart outlines seaborne trade in drybulk commodities from 1980 to 2005.

SEABORNE DRYBULK TRADE

Seaborne drybulk trade has grown by a compound annual rate of 3% per annum since 1980, but in the last 5 years growth has risen to over 5% per annum. The acceleration in trade in recent years has been driven primarily by China, whose economic growth averaged 10% per annum from 2003-2005. China's entry into the World Trade Organisation in 2001 caused a large increase in investment funds flowing into the country as foreign manufacturers sought to

benefit from lower wage costs and the future prospects of a large consumer market. China's growth helped foster a wider rebound in the other Asian economies, particularly Japan, Korea and Taiwan. As a result there has been substantial growth of drybulk trade to and from the Pacific region, for a number of key commodities.

Steel industry related trades, mainly iron ore and metallurgical coal used in the production of steel and steel products, account for about 50% of the seaborne drybulk trade. The table below shows the main drybulk commodities and the main segments of the drybulk carrier fleet they are transported by.

Commodity	Seaborne Trade 2005 (million tons)	Percent of Seaborne Drybulk Trade	Typical Drybulk Carrier Segment Carried by
Iron Ore	710	32.1%	Capesize, Panamax
Metallurgical Coal	199	9.0%	Capesize, Panamax
Thermal Coal	500	22.6%	Capesize, Panamax
Grains	292	13.2%	Panamax, Handymax, Handysize
Minor Bulks	511	23.1%	Handymax, Handysize
Total	2,212	100.0%	

Steel & Iron Ore

Chinese growth has been very steel-intensive, driven by construction and underpinned by large government infrastructure projects. Chinese production of crude steel has increased by a compound annual rate of 21.7% per annum from 2000 to 2005 to 339 million tons. The strength of Chinese steel consumption has also contributed to an export-led revival in other steel producing nations.

STEEL PRODUCTION (Million Metric Tons)

	2000	2001	2002	2003	2004	2005	Compound Annual Growth 2000-2005
North America	135	120	123	126	134	126	-1.4%
Western Europe	163	158	159	160	168	164	0.1%
Former Soviet Union	99	100	102	107	143	112	2.5%
China	127	151	182	222	272	339	21.7%
Japan	106	103	108	111	113	112	1.1%
Other Asia	98	100	105	109	116	122	4.5%
Rest of World	118	118	126	133	142	143	3.9%
Total	846	850	905	968	1,088	1,118	5.7%

The steelmaking process requires 2 major commodity inputs: iron ore and coking (or metallurgical) coal. Although China has vast domestic reserves of both commodities, its domestic reserves of iron ore are poor in quality (i.e., low in iron content) and are normally mixed with high quality imported ore. As a result, the rapid development of steel production has had a significant impact on Chinese iron ore imports, which have grown by a compound annual rate of over 30% per annum over the last 5 years.

IRON ORE IMPORTS (Million Metric Tons)

	2000	2001	2002	2003	2004	2005	Compound Annual Growth 2000-2005
Western Europe	151	131	136	135	150	140	-1.5%
China	70	92	111	148	208	275	31.5%
Japan	131	125	132	132	135	132	0.1%
Other Asia	74	79	78	79	80	85	2.8%

Total	501	491	528	576	653	712	7.3%

CHINESE STEEL PRODUCTION AND IRON ORE IMPORTS

Australia and Brazil together account for approximately two thirds of global iron ore exports. Although both have seen strong demand from China, Australia continues to benefit the most, accounting for 30% of every extra ton of iron ore imported by China in 2005 over 2004, compared to a corresponding figure of 20% for Brazil. However, although Brazilian exports to China have grown more slowly, the contribution to ton-mile demand has been greater due to the greater distances between origin and destination. India is also becoming a major exporter of ore. Unlike Australia and Brazil who tend to export primarily in the larger Capesize vessels, much of India's exports are in the smaller Panamax/Handymax vessel sizes.

IRON ORE EXPORTS (Million Metric Tons)

	2000	2001	2002	2003	2004	2005	Compound Annual Growth 2000-2005
Australia	165	175	174	197	221	239	7.7%
Indonesia	160	156	170	184	201	223	6.9%
Other	33	41	55	57	63	81	19.7%
Other Asia	33	34	35	34	36	38	2.9%
Rest of the World	115	102	110	123	123	135	3.3%
Total	506	508	544	595	644	716	7.2%

Coal

Asia's rapid industrial development has also contributed to strong demand for coal, which accounted for roughly a third of the total growth of seaborne bulk trade between 2000 and 2005. Coal is usually divided into two categories: thermal coal (or steam coal), used in power stations, and metallurgical coal (coking coal) used as an input by the steel industry.

Expansion in air-conditioned office and factory space, along with industrial use, has raised demand for electricity, of which nearly half is generated from coal-fired plants, thus increasing demand for thermal coal. In addition, Japan's domestic nuclear power generating industry has suffered from safety problems in recent years, resulting in the temporary closure of a number of nuclear power reactors and leading to increased demand for oil, gas and coal-fired power generation. Furthermore the high cost of oil and gas has led to increasing development of coal fired electricity plants across the world, especially in Asia. Thermal coal represents the majority of the total coal trade (72% in 2005) and by itself accounted for 28% of the growth of total seaborne dry bulk trade between 2000 and 2005.

Metallurgical, or coking coal, accounted for 9% of seaborne trade in 2005. Future prospects are heavily tied to the steel industry. It is used within the blast furnace to impart its carbon into the iron, giving the final steel product more strength and flexibility. Because coking coal is of higher quality than thermal coal (i.e., more carbon and less impurities), its price is higher and its trade more volatile.

COAL IMPORTS (Million Metric Tons)

	2000	2001	2002	2003	2004	2005	Compound Annual Growth 2000-2005
Western Europe	184	198	190	206	226	252	6.5%
China	145	156	159	166	179	181	4.5%
Other Asia	21	25	39	45	53	39	13.2%
Rest of the World	256	272	278	302	314	329	5.1%
Total	606	651	666	719	772	801	5.7%

Australia is the world's dominant exporter of coal, accounting for approximately 30% of global exports. However, Indonesia has increased its exports in recent years, becoming a good source for business for Panamax/Handymax

vessels. Growth in Indonesian exports has been very strong with compound annual growth of 15.9% between 2000 and 2005.

COAL EXPORTS (Million Metric Tons)

	2000	2001	2002	2003	2004	2005	Compound Annual Growth Rate 2000-2005

Total	586	629	642	700	755	783	6.0%

Grains

Wheat and coarse grains are primarily used for direct human consumption or as feed for livestock. International trade fluctuates considerably. Grains have a long history of price volatility, government interventionism and weather conditions which strongly impact trade volumes. In 2005, adverse weather impacted wheat and corn harvests in many of the world's major growing regions and production fell roughly 3% from 2004, causing total trade to decline by 1%. Soyabean trade has risen rapidly in recent years as demand for animal feed and vegetable oil has increased. However, demand growth for wheat and coarse grains is fundamentally linked in the long term to population growth and rising per capita income. With Asia experiencing rapid economic growth and increasing standards of living, it is expected that meat consumption will increase, leading to rising demand for animal feed.

WHEAT AND COARSE GRAINS IMPORTS (Million Metric Tons)

	2000	2001	2002	2003	2004	2005	Compound Annual Growth Rate 2000-2005

Total	204	209	212	202	209	201	-0.3%

International trade in grains is dominated by 4 key exporting regions; North America, Latin America, Oceania and Europe, including the Former Soviet Union which together account for over 90% of global exports. Large importers are typically North Africa (Egypt), the Middle East and more recently India.

WHEAT AND COARSE GRAINS EXPORTS (Million Metric Tons)

Minor Bulks

Trade in minor bulks constituted approximately 25% of total seaborne trade for dry bulk carriers in 2005. The table below shows that compound annual growth for all minor bulks was 2.3%, but those related to the steel and construction industries have grown even faster. Steel scrap trade has grown the fastest as scrap is the key input for steel makers using the electric arc furnace means of production. The trade for these minor bulks is geographically widespread but the Middle East has been a key importer of construction inputs in recent years.

Drybulk Carrier Supply**Overview**

The supply of drybulk shipping capacity is measured by the amount of suitable deadweight tons (dwt) available to transport cargo. This depends on the aggregate tons of the existing world fleet, deliveries of newbuildings, scrapping of older vessels, and the number of vessels undergoing maintenance, repairs, inspection, or otherwise unavailable for use. The decision to order newbuildings or scrap older vessels is influenced by many factors, including prevailing and expected charter rates, newbuilding and scrap prices, and availability of delivery dates and government and industry regulation of seaborne transportation practices.

Port and inland infrastructure developments in key load and discharge areas (particularly for iron ore and coal) have struggled to keep pace with strong growth in seaborne trade of drybulk commodities from 2003 to 2006. This has resulted in escalating port congestion and increased the time spent by vessels waiting to berth. As the time required to complete a single vessel voyage has increased, the number of vessels required has also risen, contributing to higher freight rates.

Newbuildings

In general, it takes from 18 to 36 months from the date of placing a newbuilding contract to the date a shipowner takes delivery of the vessel. During the last three to four years, the high levels of vessel orderbook have resulted in the average delivery lag being about three years and in some instances even larger. Vessels are constructed at shipyards of varying size and technical sophistication. Bulk carriers are generally considered to be the least technically sophisticated vessels (although there are many clear exceptions to this rule) and as such tend to be those where the shipyards can extract the smallest margin for their construction.

The price of newbuildings is linked to the level of demand for and supply of shipyard space, the cost of steel, labour and other factors. Generally, a shipyard can build most types of ships hence the price for drybulk carriers is influenced by the orderbook of all ship types. High newbuilding ordering activity in a particular sector is typically driven by high freight rates in that sector. As of December 2006, the total drybulk orderbook stood at 73 million tons representing 20.5% of the existing fleet. The existing orderbook is to be delivered over the next 3-5 years.

Scrapping

Scrapping (demolition) is a function of the freight market and the size of the fleet which is over-aged, usually considered to include vessels 25 years or older. However, the scrap age of a vessel depends on its size: the scrap age of smaller vessels like handysize and handymax carriers tends to be longer than the scrap age of larger ones like capsize carriers. The larger the pool of over-aged vessels, the higher the increase in scrapping during a freight market downturn. At times of high freight rates, scrapping is rare since shipowners prefer to extend the trading life of

vessels to earn more freight. Demolition is carried out by teams of breakers with blow-torches, oxy-acetylene steel cutters, etc once the vessel has been purposefully beached. The scrap value of the vessel depends on the local steel price, the quality and the amount of steel recoverable from the vessel (lightweight , or, lwt). Since the beginning of 2004, the scrap price per ton has fluctuated between \$300 and \$450 per ton of steel. For example, a panamax drybulk carrier of about 70,000 dwt typically has 10-12,000 tons of lightweight; such a vessel if when scrapped gets \$350 per lightweight ton would fetch \$3.5-\$4.2 million.

The graph below shows that in recent years the average age at which vessels have been scrapped has increased dramatically. It also shows that smaller vessels tend to have considerably longer trading lives.

AVERAGE SCRAPPING AGE OF DRY BULK CARRIERS

Drybulk Carrier Sectors

While there is no standard definition, drybulk carriers are commonly categorised into the following size sectors:

DRYBULK CARRIER SECTORS (as of December 1, 2006)

Segment	Size Range (Dwt)	Number of Vessels		Deadweight Capacity	
		Total	Share (%)	Total (MnDwt)	Share (%)
Capesize	80,000 and above	833	13.9%	131.2	36.8%
Panamax	60,000 to	1,292	21.5%	92.1	25.8%

Edgar Filing: EUROSEAS LTD. - Form F-1/A

	79,999				
	40,000				
	to				
Handymax	59,999	1,355	22.5%	65.1	18.2%
	10,000				
	to				
Handysize	39,000	2,517	42.0%	68.1	19.1%
	10,000				
	and				
Total	above	5,997	100%	356.5	100%

The table above provides information concerning the number of vessels and deadweight capacity of each of these market sectors. Although the majority of capacity in number of ships falls into the smaller Handysize and Handymax sectors, over half the fleet's deadweight carrying capacity falls into the larger Panamax and Capesize sectors.

The Capesize Sector

The Capesize sector constitutes 36.8% of the drybulk carrier fleet's total deadweight capacity. These vessels are principally designed to provide economies of scale, as innovations in handling technology tend to favour larger units. But the size restrictions of specific ports or trade routes are often taken into consideration as well – hence, the Newcastlemax or Dunkirkmax designs of Capesize bulk carriers. Over half the Capesize bulk carrier fleet falls into the 160,000 to 200,000 dwt size range, which is capable of passing through the Suez Canal.

Capesize bulk carriers are deployed almost exclusively on the major coal and iron ore trades. Until the early 1990s, the Atlantic and Pacific Capesize markets were separate and heavily reliant on long term contracts (though smaller Capesize vessels, often elderly, were sometimes spot chartered in the Atlantic). As Rotterdam expanded its capacity, and US draft restricted coal exports gave way to increasing Latin American and South African shipments, larger Capesize vessels began to gain a foothold in the Atlantic. Heightened competition between suppliers led to longer haul inter-ocean trade. Hence, major Capesize loading regions include the major iron exporters Brazil, Australia and India. And the major destinations are China, Japan, Korea, and Western Europe. For coal, the key Capesize loading areas include Australia, South Africa and Colombia.

The Capesize sector has benefited most from Asia's industrial development. The rapid expansion of Chinese steel production has lifted imports of iron ore, principally from Australia, India and Brazil, whilst the recovery in Japanese steelmaking has drawn imports from both Australia and Brazil.

Ownership of the Capesize fleets is marginally more concentrated compared to the smaller vessel sectors, though it is still highly fragmented. 201 shipowners or operators control 833 Capesize vessels – an average of 4 ships per shipowner. 21 of these companies control 10 or more Capesize vessels, at an average of 18.4 vessels per company, and they constitute 47% of the sector's total deadweight capacity. 33 companies control between 5 and 9 vessels, at an average of 6.1 ships per company, and constitute 25% of total capacity. 83 companies own just 1 Capesize vessel and account for 9% of fleet capacity.

The chart below outlines the Capesize fleet by year of build, including scheduled new deliveries. It shows that the fleet is distributed more evenly across the age spectrum than the other sectors of the fleet, with almost no 1970s built tonnage remaining to be scrapped. Capesizes built before 1980 constitute only 1% of the sector's total deadweight capacity, while those built since 2000 constitute 39%. The average age of the fleet at Dec 1, 2006 was 10.2 years.

The orderbook at the beginning of December 2006 amounted to 42.4 million dwt or 32% of the existing fleet. Actual deliveries will depend on whether shipyards alter their delivery schedules and whether newbuilding contracts are added to the volume of new orders placed. In practice, however, available yard berths for new contracts for delivery prior to 2010 are limited.

**CAPE SIZE FLEET BY YEAR OF BUILD AND
SCHEDULED NEW DELIVERIES (As of December 1, 2006)**

Capesize freight rates can be highly volatile and vary substantially even on a day-to-day basis. While Capesize rates depend largely on the market fundamentals of supply and demand, other factors (including the cost of bunkers and port charges) also influence their level. Modern vessels typically earn more than older vessels due to fuel and other efficiencies. In addition, older vessels are prone to longer off-hire periods, which reduce their earnings.

Capesize spot and time charter rates increased sharply during the second half of 2003 and reached record levels in 2004, with average spot earnings for modern vessels briefly exceeding \$100,000 per day during January 2004. Although rates subsequently declined from that peak, they have remained well above pre-2003 historical peaks. During the second half of 2004, the Capesize freight market underwent a revival, with average earnings briefly surpassing \$100,000 per day once again in early December 2004. Rates then trended lower in 2005, with a brief surge during October and November, before a large increase in August 2006 after which, in recent weeks, rates have gone on to reach their highest levels since April 2005.

MODERN CAPESIZE (170,000 DWT) FREIGHT RATES

The Panamax Sector

The Panamax sector constitutes 26% of the fleet's total deadweight capacity. Panamax vessels were originally designed to be the largest vessels able to transit the Panama Canal.

Panamaxes mainly carry coal, grains and minor drybulk cargoes on routes where relatively short voyage distances, limited cargo volumes or restricted port drafts and length of berths discourage the use of larger Capesize vessels. Key Panamax loading areas include North America, Latin America, Africa and Asia for coal, and North America, Latin America and Australia for wheat and coarse grains. Discharge areas are more uniformly distributed around the world. In recent years, Panamax vessels have also benefited from strong iron ore trade, as high cargo volumes and increased port congestion have constrained the availability of Capesize vessels and resulted in charterers using two Panamax vessels to transport traditional Capesize cargoes.

Ownership of the Panamax fleet is the most fragmented of the drybulk carrier fleet on a vessel per company basis. As of December 1, 2006, there were an estimated 402 shipowner or operators controlling approximately 1,292 Panamaxes – an average of only 3.2 vessels per company. 167 of these controlled only 1 vessel each. The top 10 shipowners controlled 21% of the sector's deadweight capacity, while the top 20 controlled 29% of the sector's deadweight capacity.

The chart below outlines the Panamax fleet by year of build, including scheduled new deliveries. The chart illustrates that the age distribution is skewed towards the younger end of the spectrum. Panamaxes built before 1980 constitute 3% of the sector's total deadweight capacity, while those built since 2000 constitute 36%. The average age of the fleet at Dec 1, 2006 was approximately 11.9 years.

The orderbook at Dec 1, 2006 amounted to 8.6 million dwt or 9% of the existing fleet. Actual deliveries will depend on whether shipyards alter their delivery schedules and whether newbuilding contracts are added to the volume of new orders placed. In practice, however, available yard berths for new contract delivery prior to 2010 are limited.

**PANAMAX FLEET BY YEAR OF BUILD AND
SCHEDULED NEW DELIVERIES (As of December 1, 2006)**

Panamax freight rates can be highly volatile and vary substantially even on a day-to-day basis though to a lesser extent compared with Capesize freight rates. While Panamax rates depend largely on the market fundamentals of supply and demand, other factors (including the cost of bunkers and port charges) also influence their level. Modern vessels typically earn more than older vessels due to fuel and other efficiencies. In addition, older vessels are prone to longer off-hire periods, which reduce their earnings.

Panamax spot and time charter rates increased sharply during the second half of 2003 and reached record peaks in 2004, with average spot earnings for modern vessels exceeding \$40,000 per day for most of the first quarter of 2004. Although rates subsequently declined from that peak, they have remained well above pre-2003 historical peaks. During the second half of 2004, the Panamax freight market underwent a revival, with average earnings briefly surpassing \$40,000 per day once again in late November to early December 2004. Rates then trended lower in 2005 until August 2006 when they started to move up again, ending the year over \$30,000 per day.

MODERN PANAMAX (75,000 DWT) FREIGHT RATES

The Handymax Sector

The Handymax (40,000-59,000 dwt) is the smallest sector of the drybulk carrier fleet, accounting for 18% of fleet deadweight capacity as of December 1, 2006. This sector, along with the Handysizes, has the greatest diversity in cargoes and routes. Their size and design (vessels are usually equipped with their own cranes, and are referred to as geared) makes them extremely versatile and able to access smaller ports where size restrictions or inadequate load and discharge facilities would exclude larger vessels.

Trading patterns and cargoes for these types of vessel are highly diversified. Typical cargoes include wheat and coarse grains, agricultural bulk commodities such as sugar and rice, fertilisers, minor ores and minerals, steel products and scrap, forest products, and semi-processed commodities such as coke and cement. In addition, Handymax vessels are employed on a limited number of low-volume short-haul iron ore and coal trades, as well as those where port size or infrastructure constraints require smaller, geared vessels.

Handymax fleet ownership is highly fragmented, with 445 different owner operators of the approximately 1,355 vessels in the world Handymax fleet: an average of just 3 vessels per company. As of December 1, 2006, 18 companies controlled 10 ships or more (at an average of 22.1 ships per company), amounting to only 29% of the fleet. Another 56 companies owned 5 to 9 ships (at an average of 6.1 ships per company) or 26% of the fleet. 212 companies control 1 vessel each, accounting collectively for 15% of the fleet.

The chart below outlines the Handymax fleet by year of build, including scheduled new deliveries. The chart indicates that at Dec 1, 2006, approximately 5% of the fleet's existing deadweight capacity was accounted for by vessels built before 1980, and these may be considered likely candidates for scrapping in the near future. Vessels built since 2000 constituted 43% of the existing fleet. The average age of the fleet at Dec 1, 2006 was 11.0 years.

The orderbook at the beginning of December 2006 amounted to 14.8 million dwt or 22.9% of the existing fleet. Actual deliveries will depend on whether shipyards alter their delivery schedules and whether newbuilding contracts are added to the volume of new orders placed.

HANDYMAX FLEET BY YEAR OF BUILD AND SCHEDULED NEW DELIVERIES (As of December 1, 2006)

Handymax freight rates can be volatile and fluctuate even on a day-to-day basis. While Handymax rates depend largely on the market fundamentals of supply and demand, other factors (including the cost of bunkers and port charges) also influence their level. Modern vessels typically earn more than older vessels due to fuel and other efficiencies. In addition, older vessels are prone to longer off-hire periods, which reduce their earnings.

Handymax earnings increased sharply during the second half of 2003 in line with the larger bulk carrier sectors, and reached record peaks in 2004, with average spot earnings for modern 45,000 dwt vessels exceeding \$38,000 per day in March 2004. During the second half of 2004, the Handymax freight market underwent a revival, with

earnings briefly surpassing \$32,000 per day once again in late November to early December 2004. Rates then trended lower in 2005 before a rebound starting in March 2006, with rates touching their highest levels since May 2005 in October and ending the year near to this level.

HANDYMAX AVERAGE FREIGHT RATES

The Handysize Sector

The Handysize (10,000-39,000 dwt) sector is the largest sector of the drybulk carrier fleet by number of vessels, accounting for 42% of the total fleet. However, in terms of deadweight capacity, it is only marginally larger than the Handymax fleet with 19.1% of total capacity. Like Handymax vessels, they are fitted with cranes which, along with their shallow drafts, make them extremely versatile and able to access smaller ports with less sophisticated onshore facilities. As a result trading patterns and cargoes for these types of vessel are highly diversified.

Handysize vessels are generally older than Handymax. The latter have begun to replace the former as new developments in ship design has enabled larger vessels to be constructed with similar drafts. Increasingly the industry is moving towards building larger vessels to benefit from economies of scale. However this does not mean that smaller vessels have become obsolete, for they are less likely to have to travel part-laden and are often able to generate substantial returns.

Like the Handymax sector, Handysize fleet ownership is highly fragmented with 813 different shipowners control 2,517 vessels: an average of just 3 vessels per company. As of December 1, 2006, 38 companies controlled 10 ships or more (an average of 24.6 ships per company), amounting to only 38% of the fleet. Another 74 companies owned 5 to 9 ships (an average of 6.3 ships per company) or 18% of the fleet and 444 companies control 1 vessel each, collectively accounting for 17% of the fleet.

The chart below outlines the Handysize fleet by year of build, including scheduled new deliveries. The chart indicates that at Dec 1, 2006, approximately 28% of the fleet's existing dwt capacity was accounted for by vessels built before 1980, and these may be considered likely candidates for scrapping in the near future. Vessels built since 2000 constituted 14% of the existing fleet. The average age of the fleet at Dec 1, 2006 was 20.6 years.

The orderbook at the beginning of December 2006 amounted to 7 million dwt or 10% of the existing fleet. Actual deliveries will depend on whether shipyards alter their delivery schedules and whether newbuilding contracts are added to the volume of new orders placed.

**HANDYSIZE FLEET BY YEAR OF BUILD AND
SCHEDULED NEW DELIVERIES (As of December 1, 2006)**

Handysize earnings increased sharply in the second half of 2003 in line with the larger bulk carrier sectors. The 18 month time charter peaked in Feb 2004 at \$22,000 per day before declining rapidly to a low of \$13,000 in June of that year. During the second half of 2004, rates rebounded and 18 month time charter rates in the Handysize sector peaked again in December 2004 at \$21,800 per day. Rates then trended lower in 2005 until a recent rebound has brought rates to over \$19,000 for the first time since March 2005.

HANDYSIZE ONE-YEAR TIME CHARTER RATES

Vessel Prices

Newbuilding Prices

Prices for the construction of new vessels have soared in recent years and have been sustained by an environment of high freight rates in all shipping sectors which has spurred ordering of all ship types, limiting the availability of shipyard berths and pushing up the prices of drybulk carriers. The first quarter of 2005 witnessed the

peak of the current newbuilding price cycle. Since then prices have fallen but remain historically high. An increase in the number of tankers ordered in the second quarter, was responsible for the rebound in 2006.

BULK CARRIER NEWBUILDING PRICES

Secondhand Prices

The second hand, or sale and purchase, market for drybulk carriers has witnessed an unprecedented rise in prices in the last few years as shipowners seek to increase the size of their fleets to benefit from the rise in trade. Prices tend to follow the direction of the freight market.

Trends in the Container Shipping Market

Introduction

Overview

The international container shipping industry provides seaborne transportation for a wide range of manufactured goods and perishables in a unitized form and represents an important and increasingly significant part of the global seaborne movement of goods. In 2005, global containerized trade (primary port to port cargo movements) stood at an estimated 115.00 million teu, while global trade including transshipment was estimated at 157 million teu as shown in the chart below. As of December 1, 2006, the global container shipping fleet contained 3,856 fully cellular container ships with a total standing slot capacity of 9.32 million teu, while the total container capable fleet capacity was slightly over 11.6 million teu.

Source: Drewry/MSI

Growth in the liner shipping market has been relatively rapid in comparison with other major shipping sectors such as tankers and bulk carriers. In the last three years, demand for container shipping has greatly accelerated, with a compound annual growth rate in world container trade of over 12% per annum.

This growth has been both integral, with an increase in commodities already carried in containers, and plausible through a spread in the scope of containerization to new cargoes previously carried breakbulk (both dry and temperature-controlled) or on ro-ro vessels.

Industry Ownership

The range of container ship owners is diverse, including liner companies, who are often significant corporate entities, and operators, who are often part of wider groups involved in other shipping activities. Shipowning generally requires a relatively high level of capital investment. Ownership of the Panamax size and larger ship sectors is less fragmented than the ownership of smaller vessels. There are several hundred operators who own only a few vessels. As a result the ownership is highly fragmented, with no single owner controlling more than about 10% of the global container fleet.

Container Ship Demand

Global container trade is spread over a range of long-haul, regional, and intra-regional routes. The mainline container trades on the major East-West routes are the world's largest in terms of volume, with the Transpacific forming the world's largest container trade. In addition to these trades, there are intermediate trades on the mainline East-West corridor serving the Middle East and the Indian Sub-Continent. North-South trades form the second layer of the global liner network, connecting the Northern hemisphere with South America, Africa and Australasia. Additionally, there are also important intra-regional container trades such as intra-Asia or intra-Europe.

Total Loaded Moves ('000TEU)

Load Region	1995	2000	2005	Average Growth Per Annum (%)
N.America	17,896	23,878	33,472	6.5 %

World	118,432	185,642	317,199	10.4 %

Source: Drewry/MSI

The Transpacific and the Far East-Europe routes are the world's two largest container trade routes. In recent years, Chinese trade routes have driven most of the increase in volumes from Asia. From 2000 to 2005 loaded exports from China have grown over 2.5 times. Other significant expenses include Latin America and Eastern Europe (incorporating FSU).

Clearly the demand for container ship capacity is a function of the volume of traffic on the key trades but effective demand is also heavily dependent on trade distance, and the operational and trading networks. Seasonality also affects demand with the peak season in the 3-4 months prior to December.

Container Ship Supply

Global container trade is served by a large and diverse fleet of container carrying vessels. The most significant part of this fleet is the fully cellular container ships, which as of December 1, 2006, comprised 80% of global available teu capacity. The remainder of the container capable fleet is comprised of a range of non-fully cellular ship types, including Multi-Purpose/Dry Cargo Vessels (Dry Cargo), Roll-On Roll-Off vessels (Ro-Ros) and numerous miscellaneous vessels (Other), which often have container carrying capacity.

The container carrying fleet has responded to rapid demand growth. Overall container capable standing slot capacity expanded at a compound annual growth rate of approximately 8% over the previous 10 years, driven mainly by growth of the fully cellular container ship fleet, which has more than doubled in capacity. As of December 1, 2006, total capacity in the fully cellular container capable fleet was 9.32 million teu. The capacity of the fully cellular container ship fleet has grown at a compound annual growth rate of over 10% per annum over the last 10 years.

Container Capable Capacity

Vessel Type	2002		2003		2004		2005		2006 ⁽¹⁾

(1)

As of December 1, 2006

The fully cellular container ship fleet is made up of a wide range of ships from less than 500 teu in capacity to more than 8,000 teu. While there is no industry standard categorization of ships according to their size they are generally divided into the following groups. At the top end of the scale are the deep sea container ships of 3,000 teu and above, which are generally responsible for servicing the mainline East-West trade routes. These ships are designated as Panamax or Post-Panamax according to their ability to transit the Panama Canal based on their physical dimensions. Intermediate container ships are between 2,000 teu and 2,999 teu in capacity and generally serve intermediate, North-South, and in some cases intra-regional, trade routes. Handysize vessels are between 1,300 teu and 1,999 teu while ships below 1,300 teu in capacity are the conventional feeder container ships generally operated on an intra-regional basis, that often relay or feed cargo within a region from or to main port hubs served by mainline trade routes. The largest proportion of the growth in container ship capacity in recent years has been in the Panamax and Post-Panamax deep sea segments.

(1)

As of December 1, 2006

As of December 1, 2006, the container ship orderbook of vessels over 500 teu was comprised of 1,182 ships, with an aggregate 4.276 million teu, and represented over 45% of the existing fleet in terms of capacity. Vessels over 4,500 teu dominate the current orderbook by teu but there is scope for more smaller vessels to be delivered by 2009 to 2010, given shorter construction times.

(1)

As of December 1, 2006

As of December 1, 2006, the global container ship fleet had an average age of 10.6 years. The Post-Panamax container ship fleet had an average age of 4.2 years. Ninety-one per cent of Post-Panamax capacity (vessels 4,500 teu or larger) was less than 10 years old. This is in stark contrast to the smaller vessels particularly those under 2,000 teu where vessels less than 5 years of age are significantly less than half the total built in the previous ten year period. Given the youthful age profile of the fleet, container ship demolition is marginal in relation to fleet additions. During the periods of buoyant freight markets, operators generally allow their older vessels to trade beyond 25 years of age but the 25+ year old fleet still accounts for only 4.2% of the global fleet measured by teu capacity.

The table below highlights the markets in which each container ship sector was deployed as at July 1, 2006 across the main trade routes. While certain size ranges are associated with specific trade routes, this concentration is not as high as generally assumed.

Deployment by Trade as of July 1, 2006

Route	1,500- 1,999	2,000- 2,499	2,500- 3,299	3,300-5, 100PX	PPX	Total
East-West Trades	36	60	185	395	404	1,080
North- South Trades	215	251	102	81	15	664
Intra-regional	168	55	58	11	14	306
South-south Trades	24	4	0	0	0	28
Inactive *	13	9	14	11	8	55
Total	456	379	359	498	441	2,133

Note:

*Includes dry docking and moving between services.

The Post-Panamax and Panamax Container Ship Sectors

The overwhelming majority of container ship capacity growth has been provided by the largest sectors of the fleet. Over two-thirds of the growth in teu container ship capacity in the worldwide container ship fleet over the last 10 years has been recorded in the post Panamax and Panamax sectors.

As a result of their physical size (unable to transit the Panama Canal), Post Panamax ships are generally restricted to operating on two trade routes only, the Transpacific, between Asia and the U.S. West Coast, and the Far East to Europe route. They can also operate on a combination of the two routes.

These two routes are the world's largest container trade routes and, given their economies of scale, Post-Panamax container ships are the vessels of choice with a commanding market share. As volumes have grown, so have the dimensions of post Panamax vessels, with a new breed of super post Panamaxes emerging in recent years to push the economies of scale benefits further.

The deployment table reveals that of 441 post Panamax ships in service at the beginning of July, 29 vessels in the 4,300-5,900 teu range were operating on trades other than the East-West ones. Fifteen were deployed on North-South routes (trading on two routes from North Europe to the East Coast South America and South Africa) and 14 on intra-regional routes, including 12 operating between the Far East and Middle East or Indian Subcontinent.

The Panamax container ship sector is made up of container ships of 3,000 teu and above in capacity, with dimensions such that they are able to transit the Panama Canal. Consequently, these ships largely operate on the three mainline trade routes the Transpacific (including Far East to US East coast via Panama), the Far East to Europe and the Transatlantic.

However, many ships over 3,000 teu now operate on trade routes elsewhere in the global liner network, such as on secondary East to West trades and increasingly on North-South and even a few intra regional trades.

The deployment table includes data for Panamax ships of 3,300 teu and above, and shows that almost one fifth of the ships in this bracket operate outside the East-West trades, with 81 on North-South routes and a small number on intra regional trades.

Intermediate, Handysize and Feeder Container Ship Sectors

The dependence of liner operators on the charter market has grown substantially and there is also an increasing prevalence of ships chartered in vessel sharing partnerships.

A large number of container ships destined for the charter markets have been financed by the German KG system, which provides tax benefits (derived from accelerated asset depreciation) to private investors in certain shipowning companies. KG equity houses are generally responsible for collecting the funds. While scheduled changes to the structure of the KG system eliminating the tax benefit to investors have been implemented, KG houses are expected to continue to promote significant investment in ships through the German tonnage tax system. Other identifiable charter shipowner groups include Greek shipowners and companies using other financing schemes such as Scandinavian KS financing.

Interest in the flexible Handysize sector remains high. Recent newbuilding developments have seen a focus on the 1,800 teu (25,000 dwt) vessel size which is aimed mainly at the intra-Asian markets. There is a gap developing

between this size and the next larger size of 2,600-3,000 teu (35-40,000 dwt), which includes both geared and gearless ships from a wide variety of shipyards. Nevertheless, approximately 50% of Handysize container ships remain active in their traditional trading areas of Latin America, Africa and, to a lesser extent, Australasia.

In the smaller ship segments, there has been little pressure on Chinese yards for upsizing beyond the 1,200 teu mark with respect to particular marketing standard designs. Not many ships are being built in the traditional 1,300-1,700 teu range.

In the Feeder sector, interest remains evenly spread among vessels slightly less than and more than the 900 teu threshold. New vessel ordering has been underpinned by significant replacement demand.

The Charter Market

As liner shipowners have increased their reliance on chartered in tonnage, the charter market has matured and become more liquid. This has fostered the development of a new breed of shipowners called charter or tramp shipowners who rely on the charter market to find ongoing employment for their vessels. Indeed, charter shipowners have increased their share of the fleet in recent years and have been responsible for a substantial share of investment in container ship contracting.

The vast majority of the charter market is focused on container ships of 4,500 teu or less, and the large majority of charter market activity in this sector is the time charter business, with charter periods ranging from several months to three years or more. However, in other instances, and generally in the case of larger Panamax and Post-Panamax container ships, the charter shipowner orders a container ship newbuilding at a shipyard and then charters it out to one of the major liner companies on a long-term time charter for a period of up to 10 or 12 years or more in duration.

Time Charter Rate Development

As can be seen from the index below, there was significant upward movement in time charter rates from the beginning of 2002 until mid-2005. Increases in global container trade initiated this upward market movement. The index below represents a weighted average of charter rates for vessels between 250 and 4,000 teu, with vessels across this spectrum generally moving in unison.

(1)

As of December 15, 2006

Source: Howe Robinson

75

This index does not cover post Panamax vessels, which are not yet a feature of the charter market. Large post Panamaxes are ordered against a specific long term time charter and assessments for standard deals cannot generally be meaningfully tracked.

(1)

As of December 15, 2006

In line with rising charter rates, the average charter period also escalated rapidly through 2003 to early 2005, tripling from 11 months in January 2004 to over 33 months approximately 2 years later. The average period collapsed to approximately 11 months by the end of 2005 and, after a turbulent 2006, around 16 by the end of August 2006.

The Newbuilding Market

Demand for new container ships has increased in recent years and, because the supply of shipbuilding capacity has been relatively tight, the newbuilding price for benchmark handysize ships has risen rapidly from approximately \$22.0 million for a 1,600 teu vessel at the beginning of 2003 to approximately \$40.0 million by the middle of 2005. This number then declined slightly to the end of November 2005, and almost regained its peak by the end of August 2006, before moderating by the end of 2006 to approximately \$36.0 million. A similar pattern is evident for other vessel categories but price variations have been less pronounced for the Panamax and Post-Panamax categories where the effects of more limited shipyard capacity combined with a period of intense demand have been overwhelmed by the benefits of economies of scale. Equivalent price moves for a representative 6,000 teu vessel show contract prices escalating from around \$60.0 million in January 2003 to around \$95.0 million in July 2005. After dipping at the end of 2005, a renewed surge in ordering in the middle of 2006 has recently pushed contracting prices up to \$100.0 million, where they have remained until the end of 2006.

(1)

As of December 1, 2006

Despite this volatile charter market, shipowners continue to order vessels. What is significant about the container market and separates it from other sectors is the commitment to growth demonstrated by the top 20 players, with almost all operators participating in an orderbook that stands at just over 2.0 million teu.

(1)

As of December 1, 2006

The Secondhand Sale & Purchase Market

Growth in the charter market has helped to increase liquidity in the sale and purchase of secondhand container ships. Not only are liner companies now more willing to charter in newbuildings on long term charters but they have begun to consider acquisitions in the secondhand market as well.

After doubling in a three year period from 1991 to 1994, resale activity levels fluctuated between 60-120 units over the following 7 years before exploding to over 200 units in line with charter market strength. Liquidity is much greater for small and medium-sized container ships than for large vessels. For instance, 3,000+ teu vessels have constituted roughly 25% of the resale market in the last 5 years but these figures include time charter back provisions whereby the liner company sells the vessel and arranges a time charter of the buyer in order to remove the asset from its balance sheet.

(1)

As of December 1, 2006

In the first 11 months of 2006, the resale market has outperformed the previous year in teu terms but the share of orders by size ranges highlights continued volatility, although there is no denying the strong upward trend.

Developments in secondhand prices are plotted below. It is worth noting that values are highly correlated for 5, 10 and 15 year old benchmark vessels of 1,500 teu throughout any cycle. Similar behavior is evident from other vessel sizes as well.

Container Ship Secondhand Price Development

(1)

As of December 1, 2006

BUSINESS**General**

We are a Marshall Islands company incorporated in May 2005. We are a provider of worldwide ocean-going transportation services. We own and operate drybulk carriers that transport major bulks such as iron ore, coal and grains, and minor bulks such as bauxite, phosphate and fertilizers. We also own and operate container ships and multipurpose vessels that transport dry and refrigerated containerized cargoes, mainly including manufactured products and perishables.

As of December 31, 2006, our fleet consisted of nine vessels, including two Panamax drybulk carriers, two Handysize drybulk carriers, four container ships and one multipurpose vessel. The total cargo carrying capacity of our four drybulk carriers and our four container ships is 207,464 dwt and 6,235 teu, respectively. Our multipurpose vessel can carry 22,568 dwt or 950 teu, or a combination thereof.

Our drybulk carriers transport major bulk cargoes (such as grain, coal, iron-ore and steel products) and minor bulk cargoes (such as bauxite, phosphate and sugar) along worldwide shipping routes. Our container ships and multipurpose vessel transport containerized dry and refrigerated cargoes, mainly including manufactured products and perishables and operate along different shipping routes depending on their size. Our container ships generally operate along inter-regional trade routes between Northern Europe and the Mediterranean Sea, the United States and Europe, the Black Sea, the Persian Gulf and Southeast Asia or serve as feeder vessels that transport cargoes between hub ports (where larger vessels call) and smaller ports in the same geographic region. None of our vessels operate in areas where European Union, United States or United Nations sanctions have been imposed or in areas that are not covered by our insurance.

Our Fleet

Since August 2005, as part of our fleet growth and renewal strategy, we purchased four vessels with an average age of 15 years for an aggregate purchase price of approximately \$82.5 million. During the same period of time, we sold two of our oldest drybulk carriers with an average age of 25 years, thus significantly reducing the average age of our fleet. We sold these two drybulk carriers for an aggregate sales price of approximately \$9.6 million, realizing a net gain of approximately \$4.4 million in continuation of our fleet renewal strategy. We have also signed a memorandum of agreement to sell our oldest vessel, m/v *Ariel* for \$5.4 million, realizing a net gain of approximately \$3.4 million. m/v *Ariel* is expected to be delivered to the buyers on or about February 15, 2007 after which the average age of our fleet will be approximately 17 years. Our objective is to expand our fleet with selective acquisitions of cargo carrying vessels.

As of January 26, 2007, the profile and employment of our fleet was the following:

Vessel Name	Type	Size		Year Built	Employment	Charter Rate (\$ per day) (*)
		DWT	TEU
