Dreyfus Strategic Municipal Bond Fund, Inc.

The Fund

A LETTER FROM THE PRESIDENT

Dear Shareholder:

We are pleased to present this semiannual report for Dreyfus Strategic Municipal Bond Fund, Inc., covering the six-month period from December 1, 2014, through May 31, 2015. For information about how the fund performed during the reporting period, as well as general market perspectives, we provide a Discussion of Fund Performance on the pages that follow.

Municipal bonds produced modestly positive total returns over the reporting period, on average. Developments in overseas markets — including ongoing deflationary pressures and economic concerns in Europe, Japan, and China — sparked a flight to quality among global investors, who turned away from foreign sovereign bonds in favor of U.S. assets. In addition, aggressively accommodative monetary policies in Europe and Japan made yields of U.S. fixed-income securities relatively attractive. Consequently, intensifying demand put downward pressure on U.S. bond yields, including municipal bonds, over much of the reporting period. This trend reversed over the reporting period's second half, erasing previous gains when the supply of newly issued municipal bond increased substantially in the low interest rate environment.

We remain optimistic regarding the long-term outlook for the U.S. economy generally and municipal bonds in particular. We believe labor markets have continued to strengthen, oil prices have risen from previous lows, and foreign currency exchange rates have become less volatile. Meanwhile, credit conditions appear to have continued to improve for most states and municipalities, and demand remains strong from investors seeking tax-advantaged investment income. As always, we urge you to discuss these observations with your financial advisor, who can help you assess their implications for your investment portfolio.

Thank you for your continued confidence and support.

J. Charles Cardona President The Dreyfus Corporation June 15, 2015

2

DISCUSSION OF FUND PERFORMANCE

For the period of December 1, 2014, through May 31, 2015, as provided by Daniel Barton and Jeffrey Burger, Portfolio Managers

Fund and Market Performance Overview

For the six-month period ended May 31, 2015, Dreyfus Strategic Municipal Bond Fund achieved a total return of 2.53% on a net-asset-value basis.¹ Over the same period, the fund provided aggregate income dividends of \$0.249 per share, which reflects an annualized distribution rate of 6.28%.2

Municipal bonds generally produced flat returns over the reporting period, as early gains were balanced by subsequent declines stemming from rising long-term interest rates and changing supply-and-demand dynamics. The fund's results were supported by its constructive interest rate and security selection strategies.

The Fund's Investment Approach

The fund seeks to maximize current income exempt from federal income tax to the extent believed by Dreyfus to be consistent with the preservation of capital. In pursuing this goal, the fund invests at least 80% of its assets in municipal bonds. Under normal market conditions, the weighted average maturity of the fund's portfolio is expected to exceed 10 years. Under normal market conditions, the fund invests at least 80% of its net assets in municipal bonds considered investment grade or the unrated equivalent as determined by Dreyfus.

The fund also has issued auction-rate preferred stock (ARPS), a percentage of which remains outstanding from its initial public offering, and has invested the proceeds in a manner consistent with its investment objective. This, along with the fund's participation in secondary inverse floater structures, has the effect of "leveraging" the portfolio, which can magnify gain and loss potential depending on market conditions.

Over time, many of the fund's older, higher yielding bonds have matured or were redeemed by their issuers. We have attempted to replace those bonds with investments consistent with the fund's investment policies. We have also sought to upgrade the fund with newly issued bonds that, in our opinion, have better structural or income characteristics than existing holdings. When such opportunities arise, we usually look to sell bonds that are close to their optional redemption date or maturity.

DISCUSSION OF FUND PERFORMANCE (continued)

Fluctuating Interest Rates Sparked Market Volatility

Over the final months of 2014, global investors seeking more competitive yields than were available in overseas markets flocked to higher yielding investments in the United States, and the resulting supply-and-demand imbalance put downward pressure on U.S. bond yields. This trend began to reverse in early 2015, when longer term interest rates drifted higher amid stronger-than-expected employment data and expectations of short-term rate hikes later this year. An economic soft patch during the winter caused yields to moderate temporarily, but longer term interest rates resumed their climb when economic growth re-accelerated in the spring, resulting in generally flat market returns for the reporting period overall. Likewise, in the wake of more favorable supply-and-demand dynamics during 2014, issuance volumes climbed over the first five months of 2015 as issuers rushed to refinance existing debt before expected increases in interest rates.

Underlying credit conditions have improved for most municipal bond issuers as tax revenues have climbed beyond pre-recession levels for many state and local governments. However, isolated credit problems have persisted for Puerto Rico and—in the wake of a recent court ruling against pension reform legislation—Illinois and other states with high levels of unfunded pension liabilities.

Various Strategies Bolstered Fund Results

The fund's focus on longer maturities captured the benefits of falling long-term interest rates and narrowing yield differences along the market's maturity spectrum early in the reporting period. The positive impact of this strategy was further magnified by the fund's leveraging strategy. While rates rose during the spring of 2015, they were not sufficient to fully offset previous gains.

Our security selection strategy also proved beneficial, as we maintained overweighted exposure to revenue-backed bonds rated BBB and lower and an underweighted position in lower yielding general obligation and escrowed bonds. The fund achieved especially strong results from revenue bonds backed by hospitals, industrial development projects, airlines, and the states' settlement of litigation with U.S. tobacco companies. In contrast, laggards for the reporting period included higher quality bonds from public power utilities and providers of essential municipal services, such as sewer

4

districts and water facilities. The fund held no exposure to troubled Puerto Rico bonds, but one Chicago holding was hurt by a credit-rating downgrade after the adverse court ruling in Illinois.

Adjusting to Changing Market Conditions

The U.S. economic recovery has gained traction, municipal bond issuance volumes have increased, and investors expect higher short-term interest rates later this year. Therefore, we currently expect bouts of heightened market volatility, and we are prepared to adjust the fund's interest rate positioning over the near term. We are more optimistic regarding the market's longer term prospects in light of robust investor demand and improving credit fundamentals, and we have retained the fund's emphasis on revenue bonds with strong income characteristics.

June 15, 2015

Bond funds are subject generally to interest rate, credit, liquidity, and market risks, to varying degrees, all of which are more fully described in the fund's prospectus. Generally, all other factors being equal, bond prices are inversely related to interest-rate changes, and rate increases can cause price declines.

High yield bonds are subject to increased credit risk and are considered speculative in terms of the issuer's perceived ability to continue making interest payments on a timely basis and to repay principal upon maturity.

The use of leverage may magnify the fund's gains or losses. For derivatives with a leveraging component, adverse changes in the value or level of the underlying asset can result in a loss that is much greater than the original investment in the derivative.

- Total return includes reinvestment of dividends and any capital gains paid, based upon net asset value per share. Past performance is no guarantee of future results. Income may be subject to state and local taxes, and some income may be subject to the federal alternative minimum tax (AMT) for certain investors. Capital gains, if any, are fully taxable. Return figures provided reflect the absorption of certain fund expenses by The Dreyfus Corporation pursuant to an undertaking in effect through November 30, 2015, at which time it may be extended, terminated, or modified. Had these expenses not been absorbed, the fund's returns would have been lower.
- 2 Annualized distribution rate per share is based upon dividends per share paid from net investment income during the period, annualized, divided by the market price per share at the end of the period, adjusted for any capital gain distributions.

Preferred Stock, at redemption value			(22.3 %)	(93,000,000)
Net Assets Applicable to Common Shareholders			100.0 %	417,785,307

a At May 31, 2015, the fund had \$115,737,551 or 27.7% of net assets applicable to Common Shareholders

invested in securities whose payment of principal and interest is dependent upon revenues generated from education.

b Zero coupon until a specified date at which time the stated coupon rate becomes effective until maturity.

c Collateral for floating rate borrowings.

d Securities exempt from registration pursuant to Rule 144A under the Securities Act of 1933. These securities may be resold in transactions exempt from registration, normally to qualified institutional buyers. At May 31, 2015, these securities were valued at \$248,447,752 or 59.5% of net assets applicable to Common Shareholders.

e These securities are prerefunded; the date shown represents the prerefunded date. Bonds which are prerefunded are collateralized by U.S. Government securities which are held in escrow and are used to pay principal and interest on the municipal issue and to retire the bonds in full at the earliest refunding date.

f Non-income producing—security in default.

g Security issued with a zero coupon. Income is recognized through the accretion of discount.

h Inverse floater security—the interest rate is subject to change periodically. Rate shown is the interest rate in effect at May 31, 2015.

i Variable rate demand note—rate shown is the interest rate in effect at May 31, 2015. Maturity date represents the next demand date, or the ultimate maturity date if earlier.
