Discussion of Non-GAAP Measures * As used in these slides posted on the Company's website, non-GAAP diluted earnings per share, non-GAAP income from operations and non-GAAP net income are each calculated using either net income or income from operations that excludes acquisition related costs, restructuring costs, and other income or charges that management does not consider to be directly related to the Company's core operating performance. Non-GAAP gross profit calculated using gross profit that excludes income or charges that management does not consider to be directly related to the Company's core operating performance. Non-GAAP diluted earnings per share is calculated by dividing non-GAAP net income by GAAP weighted average shares outstanding (diluted). Non-GAAP free cash flow is calculated by deducting purchases of property, plant and equipment from net cash flows from operating activities. Non-GAAP operating working capital is calculated by deducting accounts payable from net trade receivables plus inventories. Altra believes that the presentation of non-GAAP net income, non-GAAP income from operations, non-GAAP gross profit, non-GAAP diluted earnings per share, non-GAAP free cash flow and non-GAAP operating working capital provides important supplemental information to management and investors regarding financial and business trends relating to the Company's financial condition and results of operations.
