NUWAVE TECHNOLOGIES, INC.
NOTES TO CONDENSED FINANCIAL STATEMENTS

1. Basis of Interim Financial Statement Preparation

Prior to April 1, 2001, NUWAVE Technologies, Inc. was a development stage enterprise.

The accompanying unaudited condensed financial statements have been prepared in accordance with generally accepted accounting principles for interim information. Accordingly, they do not include all of the information and footnotes required by generally accepted accounting principles for complete financial statements. The results of operations for the interim periods shown in this report are not necessarily indicative of expected results for any future interim period or for the entire fiscal year. NUWAVE Technologies, Inc. (the "Company" or "NUWAVE"), believes that the quarterly information presented includes all adjustments (consisting only of normal, recurring adjustments)

Edgar Filing: NUWAVE TECHNOLOGIES INC - Form 10QSB

necessary for a fair presentation in accordance with generally accepted accounting principles. The accompanying condensed financial statements should be read in conjunction with the Company's Annual Report on Form 10-KSB as filed with the Securities and Exchange Commission ("SEC") on April 2, 2001.

2. Capital Transactions

On April 30, 2001, the Company's Board of Directors approved the extension of the expiration date of the IPO Warrants, issued in the Company's initial public offering, for one year until July 3, 2002. As part of the extension, NUWAVE will be able to redeem the IPO Warrants in the event that the average closing price of the Company's Common Stock is at least 120% of the then-current exercise price of the IPO Warrants for a period of twenty consecutive trading days (\$4.79). The redemption price of the IPO Warrants is \$0.10 per warrant.

During the first nine months of 2001, options covering an aggregate of 360,000 shares of our common stock were granted under the Company's Performance Incentive Stock Option Plan to four persons at exercise prices of \$0.61 to \$1.16. The foregoing options include performance-based options to three executive officers to purchase 200,000, 65,000 and 50,000 shares, respectively, of the Company's common stock at exercise prices of \$0.79, \$0.79 and \$1.16 per share. As of September 30, 2001, 50,000 of these options, exercisable at \$0.79 per share, have vested.

On August 16, 2001 the Company announced the Board Directors decision to offer holders of its placement agent warrants the opportunity to exercise such warrants at a reduced exercise price of \$1 per share of common stock for a period of sixty days terminating on October 12, 2001. There were 1,987,391 shares of common stock underlying the placement agent warrants eligible under this program. These warrants were originally issued to the placement agent in connection with two private placements of the Company's equity in May 1998 and March 2000. During the third quarter of 2001, the Company issued 434,982 shares

7

of common stock to holders of the placement agent warrants in accordance with the Company's Board of Directors decision.

3. Subsequent Events

On October 5, 2001, the Company extended the termination date of the offering to the holders of the placement agent warrants to November 30, 2001 from the previous termination date of October 12, 2001 which grants a reduced exercise price of \$1.00 per common share. From the period October 1, 2001 to November 11, 2001 an additional 403,940 shares of common stock were issued upon warrant exercise.

8

MANAGEMENT'S DISCUSSION AND ANALYSIS OR PLAN OF OPERATION

FORWARD LOOKING STATEMENTS

Edgar Filing: NUWAVE TECHNOLOGIES INC - Form 10QSB

This Report on Form 10-QSB contains "forward-looking statements" within the meaning of Section 27A of the Securities Act and Section 21E of the Securities Exchange Act of 1934, as amended (the "Exchange Act"). All statements other than statements of historical facts included in this Report, including without limitation, the statements under "General," "Marketing and Sales," "Research and Development," "Liquidity and Capital Resources," and "Plan of Operation" are forward-looking statements. The Company cautions that forward-looking statements are subject to certain risks and uncertainties that could cause actual results to differ materially from those indicated in the forward-looking statements, due to several important factors herein identified. Important factors that could cause actual results to differ materially from those indicated in the forward-looking statements ("Cautionary Statements") include delays in product development, competitive products and pricing, general economic conditions, risks of intellectual property litigation, product demand, industry capacity, new product development, commercialization of new technologies, the Company's ability to raise additional capital, and the risk factors detailed from time to time in the Company's Annual Report on Form 10-KSB and other materials filed with the SEC.

All subsequent written and oral forward-looking statements attributable to the Company or persons acting on its behalf are expressly qualified in their entirety by the Cautionary Statements.

GENERAL

Our mission is to identify, develop and commercialize high-margin, proprietary technologies suited for high-volume, high-growth markets and, in turn, achieve attractive long-term growth for our company. We have been focusing on technology related to image and video enhancement designed to enrich picture and video output with clearer, more defined detail in texture, color, contrast and tone, at low cost. Our initial products can be used for placement in products which have display screens and for supplementing existing television monitors and video game displays and can also be used by individuals over the Internet for improving their personal photographs. Our technology removes approximately 70% of the picture noise while retaining correct focus (the image and text in the image does not blur). The three product lines based upon our proprietary technology are: 1) the NUWAVE Video Processor (NVP) Technology; 2) Hardware and Retail Products and 3) Digital Software We recently started selling our technologies, having been a development stage enterprise from our organization in July 1995 through March 2001.

The NUWAVE Video Processor (NVP) technology is designed to

9

significantly enhance video output devices with clearer, sharper details and more vibrant colors when viewed on the display screen. This patented technology is manufactured in the form of ASICs (Application Specific Integrated Circuit) chips through third parties. The Company directly markets this technology to OEMs, who by incorporating this enabling technology in their products improve picture quality in their set-top boxes, televisions, VCRs, DVDs, camcorders and other video output devices. OEMs can either purchase the ASIC chips or license the NVP technology. The first full-scale production runs of the NVP 104 plastic (silicon) chip took place earlier this year and it is now being sold to the OEM marketplace. In June of 2001 we completed development and began selling to retailers VGE 101 set-top box utilizing the NVP ASIC chip for use with video games and DVD's. This is our first retail product utilizing the NVP ASIC chip. The VGE 101 is a low-cost video game enhancer that provides home video "gamers" with better video quality, to give game players an "edge" to improve their

Edgar Filing: NUWAVE TECHNOLOGIES INC - Form 10QSB

scores.

We are concentrating our activities primarily on the marketing and sales of our NVP 104 ASIC technology, the introduction and launch of the VGE 101, a set top box utilizing the NVP ASIC chip for use with video games and DVD's, marketing of our digital software technology and internet presence to the OEM and retail and security and surveillance markets, and on the continuing development of our digital and analog video enhancement technology.

Nine Months Ended September 30, 2001 Compared to Nine Months Ended September 30, 2000

We had a net loss for the nine months ended September 30, 2001 of \$2,770,000 compared to a net loss for the nine months ended September 30, 2000 of \$3,484,000. The loss for the nine months ended September 30, 2001 included \$2,448,000 in general and administrative expenses, representing a decrease of \$65,000 compared to the nine-month period ended September 30, 2000. Such decrease was primarily the result of reduced sales and marketing costs (\$392,000) combined with a decrease in payroll costs (\$64,000) and other (\$4,000). The reduction in sales and marketing costs is primarily a result of a significant reduction of ad creation costs and advertising expenditures relating to the promotion of the Company's Internet and photo portal presence partially offset by increased marketing costs related to development of the China marketplace (\$136,000) for the nine-month period ended September 30, 2001. These decreases were partially offset by increases in amortization (\$124,000), professional expenses (\$135,000).

Three Months Ended September 30, 2001 Compared to Three Months Ended September 30, 2000

For the quarter ended September 30, 2001, we had a net loss of \$1,054,000 compared to a net loss for the quarter ended September 30, 2000 of \$955,000. The loss for the quarter ended September 30, 2001 included \$1,052,000 in general and administrative expenses, representing an increase of \$356,000 compared to the quarter ended September 30, 2000. Such increase was the result of increased sales and marketing costs of (\$105,000) discussed more fully below combined with a increases in professional fees (\$94,000), financial consulting (\$39,000), amortization (\$40,000), and other (\$78,000).

10

Initial shipments of the VGE to our retail customers took place in late June and sales of the NVP 104 ASIC chips to OEM customers began during the current third quarter. As a result revenues for the three and nine month periods ended September 30, 2000, were \$445,000 and \$517,000. Although we anticipate deriving revenue from the sale of our ASIC chips and retail products during the fourth quarter of 2001, no assurance can be given that these products will be successfully marketed during such period. See "Liquidity and Capital Resources."

MARKETING AND SALES

Our three product lines are each in their initial stages of full commercialization and are currently being marketed to their respective distribution channels.

NVP 104 ASIC Technology

We have been concentrating our efforts to date on demonstrating and marketing this technology to the large Asian consumer electronics OEM's in Japan and China. Several of these potential customers have expressed serious interest

Edgar Filing: NUWAVE TECHNOLOGIES INC - Form 10QSB

in this technology. As a result, after signing confidentiality/non-disclosure agreements, these OEMs have received our specially designed evaluation boards using the patented NVP 104 chip. This board enables them to conduct the necessary testing and evaluation of the chip as it applies to their specific product(s). We received our first OEM orders for the NVP 104 chips from a premier Chinese electronics company who will utilize the chip in their DVD line. Initial deliveries took place in August and September. We believe this is a significant step towards our goal of making our technology a new standard in video equipment and expect other OEM's to follow.

Retail Products

The first full-scale production run of the VGE 101 took place during June 2001. We know of no competitive product that is capable of similarly enhancing a video game and have been introducing the VGE 101 through manufacturer's representatives who sell to select gaming distributors and nationally known retail specialty chains. Since its introduction in June the VGE has been sold to such name retailers as Electronic Boutique, GameStop, Babbages and J&R Music World and is now available in over 2500 retail stores throughout the US. During late June, the Company entered into a strategic sales and marketing agreement with Partners In Europe ("PIE"), a Shannon, Ireland based firm offering complete business solutions to North American companies seeking to establish or expand their European businesses. Under the agreement, PIE will establish a full-scale European distribution, sales, marketing and warehousing operation for NUWAVE and become the central hub for NUWAVE's European operations.

11

Digital Software Technology

During October, 2001 the Company was granted U.S. patent approval for its proprietary digital filtering technology, US Patent 6301384. With faster processing and significant visual noise reduction capabilities, we believe this technology will be essential for a number of applications, including video surveillance. The technology removes picture noise while retaining correct focus (the image and text in the image does not blur). The NUWAVE algorithm process is three times faster than any other known filter, thus allowing use in and during real time streaming video. This is especially useful for electronic news gathering; such as when journalists are on location filming/broadcasting a story.

The Company believes this patent will be useful to commercially market segments from security video surveillance systems in public access areas such as banks, airports and ATM vestibules, to computer face recognition systems. We plan to license the digital filtering technology to OEMs for embedding in, or bundling with, products such as digital cameras, PC's, scanners, camcorders and DVDs, among other digital imaging devices. The technology can also be bundled with the sale of a third party's product.

During 2000 the Company completed the initial development of its first proprietary digital photo and video software technology and launched the PicturePreptm 2000 product line. PicturePrepClub.com, an Internet photo portal, was also launched at that time. In connection with the PicturePrepClub.com web site, the Company entered into an agreement with Eastman Kodak Company whereby Print@KODAK has been NUWAVE's exclusive on-line fulfillment service to deliver prints and photoproducts directly to consumers' homes. Kodak has recently informed the Company that they will be discontinuing this service. The Company is currently exploring alternative fulfillment services and has temporally

Edgar Filing: NUWAVE TECHNOLOGIES INC - Form 10QSB

suspended marketing efforts relating to PicturePrepClub.

We believe our focused video and picture enhancement product strategy provides our Company with proprietary solutions for sale in both analog and digital formats to meet the continuing evolution and convergence of the PC to television and video markets and the worldwide trend towards digital devices. The Company intends to support the above sales efforts through various sales and

12

marketing programs/activities including trade advertising, attendance at industry trade shows, attendance at participating dealer shows, attendance at end-user events, literature mailers and co-op dealer advertising.

Sales and Marketing costs for the three and nine month periods ending September 30, 2001 were \$267,000 and \$507,000, respectively as compared to \$161,000 and \$763,000 in the same three and nine month periods ending September 30, 2000. The comparative three and nine month periods resulted in an increase of \$105,000 and decrease of \$256,000, respectively. The nine month reduction is primarily a result of a significant decline in ad creation costs and advertising expenditures relating to the promotion of the Company's Internet and photo portal presence of \$392,000 which was partially offset by increased marketing costs related to development of the China marketplace for the nine-month period ended September 30, 2001 of \$136,000. The three-month period increase was due to increased costs relating to the China marketplace development of \$53,000 and increased costs for consulting, warehousing and advertising relating to the introduction to the marketplace of the VGE product of \$52,000.

RESEARCH AND DEVELOPMENT

During the nine months ended September 30, 2001 \$677,000 was spent on research and development activities compared to \$1,188,000 for the same nine-month period in 2000, a decrease of \$511,000. For quarter ended September 30, 2001 \$249,000 was spent on research and development activities compared to \$339,000 for the same quarterly period in 2000, a decrease of \$90,000, this decrease was a direct result of the completion of the NVP104 ASIC chip. During the next twelve months, the Company estimates that it will spend approximately \$300,000 on research and development. Any increases or decreases to these research and development expenditure estimates are expected to be directly related to revenues generated from the Company's current product line-up.

LIQUIDITY AND CAPITAL RESOURCES

On September 30, 2001, the Company had cash and cash equivalents of approximately \$1,190,000 and no long-term liabilities. On August 16th the Company had announced the Board Directors decision to offer holders of its placement agent warrants the opportunity to exercise such warrants at a reduced exercise price of \$1 per share of common stock for a period of sixty days terminating on October 12, 2001, which was extended to November 30, 2001. There were 1,987,391 shares of common stock underlying the placement agent warrants eligible under this program and we had anticipated a significantly high percentage of the warrant holders to exercise. During the third quarter of 2001, the Company raised \$434,982 from the exercise of placement agent warrants. The reduced percentage of conversions was directly attributable the close and then downturn in the stock market subsequent to the events of September 11. From October 1 through November 12, 2001 an additional \$404,000 was raised from the exercise of placement agent warrants.

In order to satisfy our estimated cash requirements based on our assumptions relating to our current operations and business plan the Company is

contemplating a private placement (the "Placement") of up to 7,500,000 shares of its Common Stock, including shares underlying warrants (the "Warrants") which may be part of the Placement; provided that the aggregate gross proceeds from the Placement does not exceed \$6,000,000 (without giving effect to proceeds which would be obtained upon subsequent exercise of the Warrants). Although the Company has been in discussions with potential placement agents, it has not yet finalized a term sheet for a Placement, therefore the specific terms of the proposed Placement have not been determined.

Since it is contemplated that the aggregate number of shares of Common Stock plus the shares underlying the Warrants which may be issuable upon the Placement could exceed 20% of the Company's currently outstanding shares and will be at a per share purchase price at a discount from the current market price, Nasdaq corporate governance rules would require stockholder approval for such issuance. In order to expedite the time required to obtain shareholder approval, the Company has issued a proxy containing pro forma information regarding the proposed transaction and has requested its common stockholders approve the Placement. A Special Meeting of the Company's stockholders has been scheduled on November 28, 2001 for this purpose.

We believe that based on the success of this Placement the Company would have sufficient fund to satisfy our estimated cash requirements for at least the next twelve months. There can be no assurance that such additional capital will be available to us on commercially reasonable terms or at all, or that the Placement would not be substantially dilutive to stockholders.
