Table of Contents**Item 8.01 Other Events****Palo Verde Nuclear Generating Station (Palo Verde)**

As previously reported, in October 2006, the Nuclear Regulatory Commission (the NRC) conducted an inspection of the Palo Verde emergency diesel generators after a Palo Verde Unit 3 generator did not activate during routine inspections on July 25 and September 22, 2006. See NRC Inspections in Note 12 of Notes to Condensed Consolidated Financial Statements in the Pinnacle West Capital Corporation/Arizona Public Service Company (APS) Report on Form 10-Q for the fiscal quarter ended September 30, 2006.

On February 22, 2007, the NRC issued a white finding (low to moderate safety significance) for this matter. In connection with its finding, the NRC stated that it would use the NRC Action Matrix to determine the most appropriate response and any increase in NRC oversight, or actions [APS needs] to take in response to the most recent performance deficiencies and notify APS of its determination at a later date. Under the NRC s Action Matrix, this finding, coupled with a previous NRC yellow finding relating to a 2004 matter involving Palo Verde s safety injection systems, will place one or more Palo Verde units in the multiple/repetitive degraded cornerstone column of the NRC s Action Matrix, which will result in an enhanced NRC inspection regimen. APS continues to implement its plan to improve Palo Verde s operational performance under the leadership of Randy Edington, who joined APS as Senior Vice President and Chief Nuclear Officer in January 2007.

A copy of the NRC s press release regarding this matter is attached as Exhibit 99.1.
