MERCANTILE BANK CORPORATION

NOTES TO CONSOLIDATED FINANCIAL STATEMENTS

(Unaudited)

1. SIGNIFICANT ACCOUNTING POLICIES

Basis of Presentation: The unaudited financial statements for the three months ended March 31, 2012 include the consolidated results of operations of Mercantile Bank Corporation and its consolidated subsidiaries. These subsidiaries include Mercantile Bank of Michigan (our bank) and our bank's three subsidiaries, Mercantile Bank Mortgage Company, LLC (our mortgage company), Mercantile Bank Real Estate Co., LLC (our real estate company), and Mercantile Insurance Center, Inc. (our insurance center). These consolidated financial statements have been prepared in accordance with the instructions for Form 10-Q and Item 303(b) of Regulation S-K and do not include all disclosures required by accounting principles generally accepted in the United States of America for a complete presentation of our financial condition and results of operations. In the opinion of management, the information reflects all adjustments (consisting only of normal recurring adjustments) which are necessary in order to make the financial statements not misleading and for a fair presentation of the results of operations for such periods. The results for the period ended March 31, 2012 should not be considered as indicative of results for a full year. For further information, refer to the consolidated financial statements and footnotes included in our annual report on Form 10-K for the year ended December 31, 2011.

We formed a business trust, Mercantile Bank Capital Trust I (the trust), in 2004 to issue trust preferred securities. We issued subordinated debentures to the trust in return for the proceeds raised from the issuance of the trust preferred securities. The trust is not consolidated, but instead we report the subordinated debentures issued to the trust as a liability.

Earnings Per Share: Basic earnings per share is based on the weighted average number of common shares and participating securities outstanding during the period. Diluted earnings per share include the dilutive effect of additional potential common shares issuable under our stock-based compensation plans and our common stock warrant, and are determined using the treasury stock method. Our unvested restricted shares, which contain non-forfeitable rights to dividends whether paid or accrued (i.e., participating securities), are included in the number of shares outstanding for both basic and diluted earnings per share calculations. In the event of a net loss, our unvested restricted shares are excluded from the calculation of both basic and diluted earnings per share.

Approximately 38,000 unvested restricted shares were included in determining both basic and diluted earnings per share for the three months ended March 31, 2012. In addition, stock options and a stock warrant for approximately 45,000 and 616,000 shares of common stock, respectively, were included in determining diluted earnings per share for the three months ended March 31, 2012. Stock options for approximately 167,000 shares of common stock were antidilutive and not included in determining diluted earnings per share for the three months ended March 31, 2012.

Approximately 73,000 unvested restricted shares were included in determining both basic and diluted earnings per share for the three months ended March 31, 2011. In addition, stock options and a stock warrant for approximately 53,000 and 616,000 shares of common stock, respectively, were included in determining diluted earnings per share for the three months ended March 31, 2011. Stock options for approximately 205,000 shares of common stock were antidilutive and not included in determining diluted earnings per share for the three months ended March 31, 2011.

MERCANTILE BANK CORPORATION

NOTES TO CONSOLIDATED FINANCIAL STATEMENTS

(Unaudited)

1. SIGNIFICANT ACCOUNTING POLICIES (Continued)

Allowance for Loan Losses: The allowance for loan losses (allowance) is a valuation allowance for probable incurred credit losses. Loan losses are charged against the allowance when we believe the uncollectability of a loan is confirmed. Subsequent recoveries, if any, are credited to the allowance. We estimate the allowance balance required using past loan loss experience, the nature and volume of the portfolio, information about specific borrower situations and estimated collateral values, economic conditions and other factors. Allocations of the allowance may be made for specific loans, but the entire allowance is available for any loan that, in our judgment, should be charged-off.

A loan is impaired when, based on current information and events, it is probable we will be unable to collect the scheduled payments of principal and interest when due according to the contractual terms of the loan agreement. Factors considered in determining impairment include payment status, collateral value and the probability of collecting scheduled principal and interest payments when due. Loans that experience insignificant payment delays and payment shortfalls generally are not classified as impaired. We determine the significance of payment delays and payment shortfalls on a case-by-case basis, taking into consideration all of the circumstances surrounding the loan and the borrower, including the length of delay, the reasons for delay, the borrower's prior payment record and the amount of the shortfall in relation to the principal and interest owed. Impairment is measured on a loan-by-loan basis for commercial and construction loans by either the present value of expected future cash flows discounted at the loan's effective interest rate, the loan's obtainable market price or the fair value of collateral if the loan is collateral dependent. Large groups of smaller balance homogeneous loans are collectively evaluated for impairment. We do not separately identify individual residential and consumer loans for impairment disclosures.

Troubled Debt Restructurings: A loan is accounted for as a troubled debt restructuring if we, for economic or legal reasons, grant a concession to a borrower considered to be experiencing financial difficulties that we would not otherwise consider. A troubled debt restructuring may involve the receipt of assets from the debtor in partial or full satisfaction of the loan, or a modification of terms such as a reduction of the stated interest rate or balance of the loan, a reduction of accrued interest, an extension of the maturity date or renewal of the loan at a stated interest rate lower than the current market rate for a new loan with similar risk, or some combination of these concessions. Troubled debt restructurings can be in either accrual or nonaccrual status. Nonaccrual troubled debt restructurings are included in nonperforming loans. Accruing troubled debt restructurings are generally excluded from nonperforming loans as it is considered probable that all contractual principal and interest due under the restructured terms will be collected.

In accordance with current accounting guidance, loans modified as troubled debt restructurings are, by definition, considered to be impaired loans. Impairment for these loans is measured on a loan-by-loan basis similar to other impaired loans as described above under Allowance for Loan Losses. Certain loans modified as troubled debt restructurings may have been previously measured for impairment under a general allowance methodology (i.e., pooling), thus at the time the loan is modified as a troubled debt restructuring the allowance will be impacted by the difference between the results of these two measurement methodologies. Loans modified as troubled debt restructurings that subsequently default are factored into the determination of the allowance in the same manner as other defaulted loans.

MERCANTILE BANK CORPORATION

NOTES TO CONSOLIDATED FINANCIAL STATEMENTS

(Unaudited)

1. SIGNIFICANT ACCOUNTING POLICIES (Continued)

Derivatives: Derivative financial instruments are recognized as assets or liabilities at fair value. The accounting for changes in the fair value of derivatives depends on the use of the derivatives and whether the derivatives qualify for hedge accounting. Used as part of our asset and liability management to help manage interest rate risk, our derivatives have historically consisted of interest rate swap agreements that qualified for hedge accounting. In February 2012, we entered into an interest rate swap agreement that does qualify for hedge accounting. However, in June 2011, we simultaneously purchased and sold an interest rate cap, a structure commonly referred to as a "cap corridor", which does not qualify for hedge accounting. The current outstanding interest rate swap and cap corridor are discussed in more detail in Note 9. We do not use derivatives for trading purposes.

Changes in the fair value of derivatives that are designated, for accounting purposes, as a hedge of the variability of cash flows to be received on various loans and are effective are reported in other comprehensive income. They are later reclassified into earnings in the same periods during which the hedged transaction affects earnings and are included in the line item in which the hedged cash flows are recorded. If hedge accounting does not apply, changes in the fair value of derivatives are recognized immediately in current earnings as interest income or expense.

If designated as a hedge, we formally document the relationship between derivatives as hedged items, as well as the risk-management objective and the strategy for undertaking hedge transactions. This documentation includes linking cash flow hedges to specific assets and liabilities on the balance sheet. If designated as a hedge, we also formally assess, both at the hedge's inception and on an ongoing basis, whether the derivative instruments that are used are highly effective in offsetting changes in cash flows of the hedged items. Ineffective hedge gains and losses are recognized immediately in current earnings as noninterest income or expense. We discontinue hedge accounting when we determine the derivative is no longer effective in offsetting changes in the cash flows of the hedged item, the derivative is settled or terminates, or treatment of the derivative as a hedge is no longer appropriate or intended.

1. SIGNIFICANT ACCOUNTING POLICIES (Continued)

Adoption of New Accounting Standards: In April 2011, the FASB issued ASU 2011-03, *Reconsideration of Effective Control for Repurchase Agreements*, to improve financial reporting of repurchase agreements and other agreements that both entitle and obligate a transferor to repurchase or redeem financial assets on substantially the agreed upon terms. This ASU eliminates consideration of the transferor's ability to fulfill its contractual rights and obligations from the criteria, as well as related implementation guidance (i.e., that it possesses adequate collateral to fund substantially all the cost of purchasing replacement financial assets), in determining effective control, even in the event of default by the transferee. Other criteria applicable to the assessment of effective control are not changed by this new guidance. This ASU became effective January 1, 2012. The adoption of this new ASU did not have a material effect on our results of operations or financial position.

In May 2011, the FASB issued ASU 2011-04, *Amendments to Achieve Common Fair Value Measurement and Disclosure Requirements in U.S. GAAP and IFRS*, to align the fair value measurement and disclosure requirements in U.S. GAAP and International Financial Reporting Standards (IFRSs). Many of the amendments in this ASU will not result in a change in requirements but simply clarify existing requirements. The amendments in this ASU that do not change a principle or requirement for measuring fair value or disclosing information about fair value measurements include the following: (1) the ASU permits an exception for measuring fair value when a reporting entity manages its financial instruments on the basis of its net exposure, rather than gross exposure, to those risks; (2) the ASU clarifies that the application of premiums and discounts in a fair value measurement is related to the unit of account for the asset or liability being measured at fair value and specifically prohibits blockage discounts for Level 2 and 3 investments; and (3) the amendments expand fair value measurement disclosures. The more significant new disclosures include: (1) for all Level 3 fair value measurements, quantitative information about significant unobservable inputs used as well as a qualitative discussion about the sensitivity of recurring Level 3 fair value measurements; (2) transfers between Level 1 and Level 2 fair value measurements on a gross basis, including the reasons for those transfers; and (3) the categorization by level of the fair value hierarchy for items that are not measured at fair value in the balance sheet but for which the fair value is required to be disclosed (e.g., held-to-maturity securities and loans). The ASU is to be applied prospectively and became effective January 1, 2012. The adoption of this new ASU did not have a material effect on our results of operations or financial position.

1. SIGNIFICANT ACCOUNTING POLICIES (Continued)

In June 2011, the FASB issued ASU 2011-05, *Presentation of Comprehensive Income*, to improve the comparability, consistency and transparency of financial reporting and to increase the prominence of items reported in other comprehensive income. The ASU eliminates the option to present components of other comprehensive income as part of the Statement of Changes in Shareholders' Equity. Instead, all changes in shareholders' equity must be presented either in a single continuous statement of comprehensive income or in two separate but consecutive statements. In the single continuous statement approach, the statement should present the components of net income and total net income, the components of other comprehensive income and total other comprehensive income, and a total for comprehensive income. In the two-statement approach, the first statement should present the components of net income and total net income followed consecutively by a second statement that should present the components of other comprehensive income, a total for other comprehensive income and a total for comprehensive income. Also known as "recycling," companies will also be required to display reclassification adjustments and their effect on net income and other comprehensive income in the statement(s) in which they appear. The ASU does not change certain other current requirements including items that constitute net income and other comprehensive income. The ASU is to be applied retrospectively and became effective January 1, 2012. Beginning with this Form 10-Q, we have included the Consolidated Statements of Comprehensive Income.

2. SECURITIES (Continued)

We evaluate securities for other-than-temporary impairment at least on a quarterly basis. Consideration is given to the length of time and the extent to which the fair value has been less than cost, the financial condition and near-term prospects of the issuer, and the intent and ability we have to retain our investment in the issuer for a period of time sufficient to allow for any anticipated recovery in fair value. For those debt securities whose fair value is less than their amortized cost basis, we also consider our intent to sell the security, whether it is more likely than not that we will be required to sell the security before recovery and if we do not expect to recover the entire amortized cost basis of the security. In analyzing an issuer's financial condition, we may consider whether the securities are issued by the federal government or its agencies, whether downgrades by bond rating agencies have occurred and the results of reviews of the issuer's financial condition.

At March 31, 2012, 20 debt securities with a fair value totaling \$29.2 million have unrealized losses with aggregate depreciation of \$0.3 million, or 0.2% from the amortized cost basis of total securities. At March 31, 2012, 210 debt securities and a mutual fund with a fair value totaling \$101.0 million have unrealized gains with aggregate appreciation of \$5.1 million, or 3.5% from the amortized cost basis of total securities. After we considered whether the securities were issued by the federal government or its agencies and whether downgrades by bond rating agencies had occurred, we determined that unrealized losses were due to changing interest rate environments. As we do not intend to sell our debt securities before recovery of their cost basis and we believe it is more likely than not that we will not be required to sell our debt securities before recovery of the cost basis, no declines are deemed to be other-than-temporary.

The amortized cost and fair value of debt securities at March 31, 2012, by contractual maturity, are shown below. The contractual maturity is utilized below for U.S. Government agency debt obligations and municipal bonds. Expected maturities may differ from contractual maturities because borrowers may have the right to call or prepay obligations with or without call or prepayment fees. Securities not due at a single maturity date, primarily mortgage-backed securities, are shown separately.

The maturities of securities and their weighted average yields at March 31, 2012 are also shown in the following table. The yields for municipal securities are included at their tax equivalent yield.

	Weighted Average Yield	Amortized Cost	Fair Value
Due in 2012	6.47%	\$ 1,878,000	\$ 1,886,000
Due in 2013 through 2017	4.29	8,979,000	9,303,000
Due in 2018 through 2022	3.91	31,831,000	32,076,000
Due in 2023 and beyond	4.72	58,561,000	60,289,000
Mortgage-backed securities	5.16	28,833,000	31,311,000

2. SECURITIES (Continued)

At March 31, 2012, and December 31, 2011, the amortized cost of securities issued by the State of Michigan and all its political subdivisions totaled \$30.5 million with estimated market values of \$31.6 million and \$31.7 million, respectively. Total securities of any other specific issuer, other than the U.S. Government and its agencies, did not exceed 10% of shareholders' equity.

The carrying value of U.S. Government agency debt obligations and mortgage-backed securities that are pledged to secure repurchase agreements and letters of credit issued on behalf of our customers was \$92.5 million and \$109.0 million at March 31, 2012 and December 31, 2011, respectively. In addition, substantially all of our municipal bonds have been pledged to the Discount Window of the Federal Reserve Bank of Chicago. Investments in Federal Home Loan Bank stock are restricted and may only be resold or redeemed by the issuer.

3. LOANS AND ALLOWANCE FOR LOAN LOSSES

Our total loans at March 31, 2012 were \$1.05 billion compared to \$1.07 billion at December 31, 2011, a decrease of \$20.7 million, or 1.9%. The components of our loan portfolio disaggregated by class of loan within the loan portfolio segments at March 31, 2012 and December 31, 2011, and the percentage change in loans from the end of 2011 to the end of the first quarter of 2012, are as follows:

	March 31, 2012		December 31, 2011		Percent
	Balance	%	Balance	%	Increase (Decrease)
Commercial:					
Commercial and industrial	\$ 259,705,000	24.7	\$ 266,548,000	24.8%	(2.6)%

3. LOANS AND ALLOWANCE FOR LOAN LOSSES (Continued)

Nonperforming loans as of March 31, 2012 and December 31, 2011 were as follows:

	March 31, 2012	December 31, 2011
Loans past due 90 days or more still accruing interest	\$ 0	\$ 0
Nonaccrual loans	38,668,000	45,074,000
Total nonperforming loans	\$ 38,668,000	\$ 45,074,000

As discussed in the Troubled Debt Restructurings section of our Significant Accounting Policies, troubled debt restructurings can be in either accrual or nonaccrual status. Nonaccrual troubled debt restructurings are included in nonperforming loans whereas accruing troubled debt restructurings are generally excluded from nonperforming loans. At March 31, 2012 and December 31, 2011, there were no accruing troubled debt restructurings included in nonperforming loans.

The recorded principal balance of nonaccrual loans, including troubled debt restructurings, was as follows:

	March 31, 2012	December 31, 2011
Commercial:		
Commercial and industrial	\$ 4,662,000	\$ 5,916,000
Vacant land, land development, and residential construction	2,562,000	3,448,000
Real estate owner occupied	4,362,000	6,635,000
Real estate non-owner occupied	17,074,000	24,169,000
Real estate multi-family and residential rental	7,554,000	2,532,000
Total commercial	36,214,000	42,700,000
Retail:		
Home equity and other	1,004,000	1,013,000
1-4 family mortgages	1,450,000	1,361,000
Total retail	2,454,000	2,374,000

Edgar Filing: MERCANTILE BANK CORP - Form 10-Q

Total nonaccrual loans	\$ 38,668,000	\$ 45,074,000

3. LOANS AND ALLOWANCE FOR LOAN LOSSES (Continued)

Credit Quality Indicators. We utilize a comprehensive grading system for our commercial loans. All commercial loans are graded on a ten grade rating system. The rating system utilizes standardized grade paradigms that analyze several critical factors such as cash flow, operating performance, financial condition, collateral, industry condition and management. All commercial loans are graded at inception and reviewed and, if appropriate, re-graded at various intervals thereafter. The risk assessment for retail loans is primarily based on the type of collateral.

Loans by credit quality indicators were as follows as of March 31, 2012:

Commercial credit exposure credit risk profiled by internal credit risk grades:

	Commercial and Industrial	Commercial Vacant Land, Land Development, and Residential Construction	Commercial Real Estate - Owner Occupied	Commercial Real Estate - Non-Owner Occupied	Commercial Real Estate - Multi-Family and Residential Rental
Internal credit risk grade groupings:					
Grades 1 - 4	\$ 167,519,000	\$ 10,291,000	\$ 155,000,000	\$ 124,286,000	\$ 26,546,000
Grades 5 - 7	85,360,000	45,238,000	105,824,000	148,430,000	29,227,000
Grades 8 - 9	6,826,000	5,733,000	10,513,000	46,441,000	9,218,000
Total commercial	\$ 259,705,000	\$ 61,262,000	\$ 271,337,000	\$ 319,157,000	\$ 64,991,000

Retail credit exposure credit risk profiled by collateral type:

	Retail Home Equity and Other	Retail 1-4 Family Mortgages
Total retail	\$ 41,940,000	\$ 33,282,000

3. LOANS AND ALLOWANCE FOR LOAN LOSSES (Continued)

All commercial loans are graded using the following number system:

- Grade 1. Excellent credit rating that contain very little, if any, risk of loss.
- Grade 2. Strong sources of repayment and have low repayment risk.
- Grade 3. Good sources of repayment and have limited repayment risk.
- Grade 4. Adequate sources of repayment and acceptable repayment risk; however, characteristics are present that render the credit more vulnerable to a negative event.
- Grade 5. Marginally acceptable sources of repayment and exhibit defined weaknesses and negative characteristics.
- Grade 6. Well defined weaknesses which may include negative current cash flow, high leverage, or operating losses. Generally, if the credit does not stabilize or if further deterioration is observed in the near term, the loan will likely be downgraded and placed on the Watch List (i.e., list of lending relationships that receive increased scrutiny and review by the Board of Directors and senior management).
- Grade 7. Defined weaknesses or negative trends that merit close monitoring through Watch List status.
- Grade 8. Inadequately protected by current sound net worth, paying capacity of the obligor, or pledged collateral, resulting in a distinct possibility of loss requiring close monitoring through Watch List status.
- Grade 9. Vital weaknesses exist where collection of principal is highly questionable.
- Grade 10. Considered uncollectable and of such little value that their continuance as an asset is not warranted.

The primary risk elements with respect to commercial loans are the financial condition of the borrower, the sufficiency of collateral, and timeliness of scheduled payments. We have a policy of requesting and reviewing periodic financial statements from commercial loan customers and employ a disciplined and formalized review of the existence of collateral and its value. The primary risk element with respect to each residential real estate loan and consumer loan is the timeliness of scheduled payments. We have a reporting system that monitors past due loans and have adopted policies to pursue creditor's rights in order to preserve our collateral position.

3. LOANS AND ALLOWANCE FOR LOAN LOSSES (Continued)

In general, our policy dictates that a renewal or modification of an 8- or 9-rated loan meets the criteria of a troubled debt restructuring, although we review and consider all renewed and modified loans as part of our troubled debt restructuring assessment procedures. Loan relationships rated 8 contain significant financial weaknesses, resulting in a distinct possibility of loss, while relationships rated 9 reflect vital financial weaknesses, resulting in a highly questionable ability on our part to collect principal; we believe borrowers warranting such ratings would have difficulty obtaining financing from other market participants. Thus, due to the lack of comparable market rates for loans with similar risk characteristics, we believe 8- or 9-rated loans renewed or modified were done so at below market rates. Loans that are identified as troubled debt restructurings are considered impaired and are individually evaluated for impairment when assessing these credits in our allowance for loan losses calculation.

4. PREMISES AND EQUIPMENT, NET

Premises and equipment are comprised of the following:

	March 31, 2012	December 31, 2011
Land and improvements	\$ 8,531,000	\$ 8,531,000
Buildings	24,528,000	24,528,000
Furniture and equipment	13,030,000	12,977,000
	46,089,000	46,036,000
Less: accumulated depreciation	19,622,000	19,234,000
Premises and equipment, net	\$ 26,467,000	\$ 26,802,000

Depreciation expense totaled \$0.4 million during both the first quarter of 2012 and 2011.

6. SHORT-TERM BORROWINGS

Information relating to our securities sold under agreements to repurchase follows:

	Three Months Ended March 31, 2012	Twelve Months Ended December 31, 2011
Outstanding balance at end of period	\$ 57,440,000	\$ 72,569,000
Average interest rate at end of period	0.32%	0.31%
Average daily balance during the period	\$ 64,716,000	\$ 80,137,000

Edgar Filing: MERCANTILE BANK CORP - Form 10-Q

Average interest rate during the period	0.31%	0.51%
---	-------	-------

Maximum daily balance during the period	\$ 73,054,000	\$ 116,397,000
---	---------------	----------------

Securities sold under agreements to repurchase (repurchase agreements) generally have original maturities of less than one year. Repurchase agreements are treated as financings and the obligations to repurchase securities sold are reflected as liabilities. Securities involved with the agreements are recorded as assets of our bank and are held in safekeeping by a correspondent bank. Repurchase agreements are offered principally to certain large deposit customers. Repurchase agreements are secured by securities with an aggregate market value equal to the aggregate outstanding balance.

NOTES TO CONSOLIDATED FINANCIAL STATEMENTS

(Unaudited)

7. FEDERAL HOME LOAN BANK ADVANCES

Our outstanding balances at March 31, 2012 totaled \$45.0 million and mature at varying dates from April 2012 through March 2017, with fixed rates of interest from 1.25% to 4.42% and averaging 3.13%. At December 31, 2011, outstanding balances totaled \$45.0 million with maturities ranging from March 2012 through January 2014, with fixed rates of interest from 3.04% to 4.42% and averaging 3.57%.

Each advance is payable at its maturity date, and is subject to a prepayment fee if paid prior to the maturity date. The advances are collateralized by residential mortgage loans, first mortgage liens on multi-family residential property loans, first mortgage liens on commercial real estate property loans, and substantially all other assets of our bank, under a blanket lien arrangement. Our borrowing line of credit as of March 31, 2012 totaled about \$89 million, with availability approximating \$40 million.

Maturities of currently outstanding FHLB advances are as follows:

2012	\$ 20,000,000
2013	10,000,000
2014	5,000,000
2015	0
2016	0
2017	10,000,000

8. COMMITMENTS AND OFF-BALANCE SHEET RISK

Our bank is a party to financial instruments with off-balance sheet risk in the normal course of business to meet the financing needs of its customers. These financial instruments include commitments to extend credit and standby letters of credit. Loan commitments to extend credit are agreements to lend to a customer as long as there is no violation of any condition established in the contract. Standby letters of credit are conditional commitments issued by our bank to guarantee the performance of a customer to a third party. Commitments generally have fixed expiration dates or other termination clauses and may require payment of a fee. Since many of the commitments are expected to expire without being drawn upon, the total commitment amounts do not necessarily represent future cash requirements.

These instruments involve, to varying degrees, elements of credit risk in excess of the amount recognized, if any, in the balance sheet. Our bank's maximum exposure to loan loss in the event of nonperformance by the other party to the financial instrument for commitments to extend credit and standby letters of credit is represented by the contractual notional amount of those instruments. Our bank uses the same credit policies in making commitments and conditional obligations as it does for on-balance sheet instruments. Collateral, such as accounts receivable, securities, inventory, and property and equipment, is generally obtained based on our credit assessment of the borrower. If required, estimated loss exposure resulting from these instruments is expensed and is generally recorded as a liability. There was no reserve or liability balance for these instruments as of March 31, 2012. During 2011, we expensed \$0.4 million through provision for loan losses in association with a particular standby letter of credit. Due to the nature of the transaction and the insignificant amount, the \$0.4 million was included as a specific reserve within the allowance for loan losses as of December 31, 2011.

8. COMMITMENTS AND OFF-BALANCE SHEET RISK (Continued)

A summary of the contractual amounts of our financial instruments with off-balance sheet risk at March 31, 2012 and December 31, 2011 follows:

	March 31, 2012	December 31, 2011
Commercial unused lines of credit	\$ 176,412,000	\$ 171,683,000
Unused lines of credit secured by 1-4 family residential properties	24,184,000	24,663,000
Credit card unused lines of credit	7,745,000	7,565,000
Other consumer unused lines of credit	3,054,000	3,367,000
Commitments to extend credit	54,666,000	30,929,000
Standby letters of credit	8,243,000	15,923,000
	\$ 274,304,000	\$ 254,130,000

Certain of our commercial loan customers have entered into interest rate swap agreements directly with our correspondent banks. To assist our commercial loan customers in these transactions, and to encourage our correspondent banks to enter into the interest rate swap transactions with minimal credit underwriting analyses on their part, we have entered into risk participation agreements with the correspondent banks whereby we agree to make payments to the correspondent banks owed by our commercial loan customers under the interest rate swap agreement in the event that our commercial loan customers do not make the payments. We are not a party to the interest rate swap agreements under these arrangements. As of March 31, 2012, the total notional amount of the underlying interest rate swap agreements was \$25.3 million, with a net fair value from our commercial loan customers' perspective of negative \$3.8 million. These risk participation agreements are considered financial guarantees in accordance with applicable accounting guidance and are therefore recorded as liabilities at fair value, generally equal to the fees collected at the time of their execution. These liabilities are accreted into income during the term of the interest rate swap agreements, generally ranging from four to fifteen years.

9. HEDGING ACTIVITIES

Our interest rate risk policy includes guidelines for measuring and monitoring interest rate risk. Within these guidelines, parameters have been established for maximum fluctuations in net interest income. Possible fluctuations are measured and monitored using net interest income simulation. Our policy provides for the use of certain derivative instruments and hedging activities to aid in managing interest rate risk to within the policy parameters.

MERCANTILE BANK CORPORATION

NOTES TO CONSOLIDATED FINANCIAL STATEMENTS

(Unaudited)

9. HEDGING ACTIVITIES (Continued)

A majority of our assets are comprised of commercial loans on which the interest rates are variable; however, the interest rates on a significant portion of these loans will likely lag an increase in market interest rates under a rising interest rate environment. As of March 31, 2012, the Mercantile Bank Prime Rate, the index on which a significant portion of our commercial floating rate loans is based, was 4.50% compared to the Wall Street Journal Prime Rate of 3.25%. Historically, the two indices have been equal; however, we elected not to reduce the Mercantile Bank Prime Rate in late October and mid-December of 2008 when the Wall Street Journal Prime Rate declined by 50 and 75 basis points, respectively. It is our general intent to keep the Mercantile Bank Prime Rate unchanged until the Wall Street Journal Prime Rate equals the Mercantile Bank Prime Rate, at which time the two indices will likely remain equal in future periods. In addition, a majority of our floating rate loans, whether tied to the Mercantile Bank Prime Rate, Wall Street Journal Prime Rate or Libor rates, have interest rate floors that are currently higher than the indexed rate provides for. To help mitigate the negative impact to our net interest income in an increasing interest rate environment resulting from our cost of funds likely increasing at a higher rate than the yield on our assets, we may periodically enter into derivative financial instruments.

In June 2011, we simultaneously purchased and sold an interest rate cap with a correspondent bank, a structure commonly referred to as a cap corridor. The cap corridor, which does not qualify for hedge accounting, consisted of us purchasing a \$100 million interest rate cap with a strike rate in close proximity to the then-current 30-Day Libor rate and selling a \$100 million interest rate cap with a strike rate that is 125 basis points higher than the purchased interest rate cap strike rate. On the settlement date, the present value of the purchased interest rate cap was recorded as an asset, while the present value of the sold interest rate cap was recorded as a liability. At each month end, the recorded balances of the purchased and sold interest rate caps are adjusted to reflect the current present values, with the offsetting entry being recorded to interest income on commercial loans. We recorded a net decrease of \$0.2 million during the first quarter of 2012 to interest income on commercial loans to reflect the net change in present values. Payments made or received under the purchased and sold interest rate cap contracts, if any, are also recorded to interest income on commercial loans. No such payments were made or received during the first quarter of 2012.

In February 2012, we entered into an interest rate swap agreement with a correspondent bank to hedge the floating rate on our trust preferred securities. Our \$32.0 million of trust preferred securities have a rate equal to 90-Day Libor Rate plus a fixed spread of 218 basis points, and are subject to repricing quarterly. The interest rate swap agreement provides for us to pay our correspondent bank a fixed rate, while our correspondent bank will pay us the 90-Day Libor Rate on a \$32.0 million notional amount. The quarterly re-set dates for the floating rate on the interest rate swap agreement are the same as the re-set dates for the floating rate on the trust preferred securities. While the trade date of the interest rate swap agreement was in February 2012, the effective date is not until January 2013, with a maturity date of January 2018. The interest rate swap agreement does qualify for hedge accounting; therefore, monthly fluctuations in the present value of the interest rate swap agreement, net of tax effect, are recorded to other comprehensive income (loss). As of March 31, 2012, the present value of the interest rate swap agreement, which is recorded as an asset, equaled \$0.1 million. The present value of the interest rate swap agreement on the trade date was \$0.

(1) See Note 11 for a description of the fair value hierarchy as well as a disclosure of levels for classes of financial assets and liabilities. Carrying amount is the estimated fair value for cash and cash equivalents, Federal Home Loan Bank stock, accrued interest receivable and payable, bank owned life insurance, demand deposits, securities sold under agreements to repurchase, and variable rate loans and deposits that reprice frequently and fully. Security fair values are based on market prices or dealer quotes, and if no such information is available, on the rate and term of the security and information about the issuer. For fixed rate loans and deposits and for variable rate loans and deposits with infrequent repricing or repricing limits, fair value is based on discounted cash flows using current market rates applied to the estimated life and credit risk. Fair value of subordinated debentures and Federal Home Loan Bank advances is based on current rates for similar financing. Fair value of interest rate caps and interest rate swap is determined primarily utilizing market-consensus forecasted yield curves. Fair value of off-balance sheet items is estimated to be nominal.

10. FAIR VALUES OF FINANCIAL INSTRUMENTS (Continued)

Current accounting pronouncements require disclosure of the estimated fair value of financial instruments as disclosed in Note 11. Given current market conditions, a portion of our loan portfolio is not readily marketable and market prices do not exist. We have not attempted to market our loans to potential buyers, if any exist, to determine the fair value of those instruments. Since negotiated prices in illiquid markets depend upon the then present motivations of the buyer and seller, it is reasonable to assume that actual sales prices could vary widely from any estimate of fair value made without the benefit of negotiations. Additionally, changes in market interest rates can dramatically impact the value of financial instruments in a short period of time. Accordingly, the fair value measurements for loans included in the table above are unlikely to represent the instruments' liquidation values.

11. FAIR VALUES

Fair value is defined as the price that would be received to sell an asset or paid to transfer a liability in an orderly transaction between market participants. A fair value measurement assumes that the transaction to sell the asset or transfer the liability occurs in the principal market for the asset or liability, or in the absence of a principal market, the most advantageous market for the asset or liability. The price of the principal (or most advantageous) market used to measure the fair value of the asset or liability shall not be adjusted for transaction costs. An orderly transaction is a transaction that assumes exposure to the market for a period prior to the measurement date to allow for marketing activities that are usual and customary for transactions involving such assets and liabilities; it is not a forced transaction. Market participants are buyers and sellers in the principal market that are (i) independent, (ii) knowledgeable, (iii) able to transact and (iv) willing to transact.

We are required to use valuation techniques that are consistent with the market approach, the income approach and/or the cost approach. The market approach uses prices and other relevant information generated by market transactions involving identical or comparable assets and liabilities. The income approach uses valuation techniques to convert future amounts, such as cash flows or earnings, to a single present amount on a discounted basis. The cost approach is based on the amount that currently would be required to replace the service capacity of an asset (replacement cost). Valuation techniques should be consistently applied. Inputs to valuation techniques refer to the assumptions that market participants would use in pricing the asset or liability. Inputs may be observable, meaning those that reflect the assumptions market participants would use in pricing the asset or liability based on market data obtained from independent sources, or unobservable, meaning those that reflect our own assumptions about the assumptions market participants would use in pricing the asset or liability based on the best information available in the circumstances. In that regard, we utilize a fair value hierarchy for valuation inputs that gives the highest priority to quoted prices in active markets for identical assets or liabilities and the lowest priority to unobservable inputs. The fair value hierarchy is as follows:

Level 1: Quoted prices (unadjusted) for identical assets or liabilities in active markets that we have the ability to access as of the measurement date.

(Continued)

Table of Contents

MERCANTILE BANK CORPORATION

NOTES TO CONSOLIDATED FINANCIAL STATEMENTS

(Unaudited)

11. FAIR VALUES (Continued)

Level 2: Significant other observable inputs other than Level 1 prices such as quoted prices for similar assets or liabilities in active markets; quoted prices for identical or similar assets or liabilities in markets that are not active; or other inputs that are observable or can be derived from or corroborated by observable market data by correlation or other means.

Level 3: Significant unobservable inputs that reflect our own assumptions about the assumptions that market participants would use in pricing an asset or liability.

The following is a description of our valuation methodologies used to measure and disclose the fair values of our financial assets and liabilities on a recurring or nonrecurring basis:

Securities available for sale. Securities available for sale are recorded at fair value on a recurring basis. Fair value measurement is based on quoted prices, if available. If quoted prices are not available, fair values are measured using independent pricing models. Level 2 securities include U.S. Government agency bonds, mortgage-backed securities issued or guaranteed by U.S. Government agencies, municipal general obligation and revenue bonds, Michigan Strategic Fund bonds and mutual funds. We have no Level 1 or 3 securities.

Securities held to maturity. Securities held to maturity are carried at amortized cost when we have the positive intent and ability to hold them to maturity. The fair value of held to maturity securities is based on quoted prices, if available. If quoted prices are not available, fair values are measured using independent pricing models. We had no securities held to maturity outstanding as of March 31, 2012 or December 31, 2011.

Mortgage loans held for sale. Mortgage loans held for sale are carried at the lower of aggregate cost or fair value and are measured on a nonrecurring basis. Fair value is based on independent quoted market prices, where applicable, or the prices for other mortgage whole loans with similar characteristics. As of March 31, 2012 and December 31, 2011, we determined that the fair value of our mortgage loans held for sale was similar to the cost; therefore, we carried the \$3.3 million and \$2.6 million, respectively, of such loans at cost so they are not included in the nonrecurring table below.

Loans. We do not record loans at fair value on a recurring basis. However, from time to time, we record nonrecurring fair value adjustments to collateral dependent loans to reflect partial write-downs or specific reserves that are based on the observable market price or current estimated value of the collateral. These loans are reported in the nonrecurring table below at initial recognition of impairment and on an ongoing basis until recovery or charge-off.

Foreclosed Assets. At time of foreclosure or repossession, foreclosed and repossessed assets are adjusted to fair value less costs to sell upon transfer of the loans to foreclosed and repossessed assets, establishing a new cost basis. We subsequently adjust estimated fair value of foreclosed assets on a nonrecurring basis to reflect write-downs based on revised fair value estimates.

Derivatives. For interest rate cap contracts and interest rate swap agreements, we measure fair value utilizing models that use primarily market observable inputs, such as forecasted yield curves, and accordingly, interest rate cap contracts and interest rate swap agreements are classified as Level 2.

⁽¹⁾ Represents carrying value and related write-downs for which adjustments are based on the estimated value of the property or other assets.

12. REGULATORY MATTERS

We are subject to regulatory capital requirements administered by federal banking agencies. Capital adequacy guidelines and prompt corrective action regulations involve quantitative measures of assets, liabilities, and certain off-balance sheet items calculated under regulatory accounting practices. Capital amounts and classifications are also subject to qualitative judgments by regulators about components, risk weightings, and other factors, and the regulators can lower classifications in certain cases. Failure to meet various capital requirements can initiate regulatory action that could have a direct material effect on our financial statements.

The prompt corrective action regulations provide five classifications, including well capitalized, adequately capitalized, undercapitalized, significantly undercapitalized, and critically undercapitalized, although these terms are not used to represent overall financial condition. If an institution is not well capitalized, regulatory approval is required to accept brokered deposits. Subject to limited exceptions, no institution may make a capital distribution if, after making the distribution, it would be undercapitalized. If an institution is undercapitalized, it is subject to close monitoring by its principal federal regulator, its asset growth and expansion are restricted, and plans for capital restoration are required. In addition, further specific types of restrictions may be imposed on the institution at the discretion of the federal regulator. At March 31, 2012 and December 31, 2011, our bank was in the well capitalized category under the regulatory framework for prompt corrective action. There are no conditions or events since March 31, 2012 that we believe have changed our bank's categorization.

MERCANTILE BANK CORPORATION

NOTES TO CONSOLIDATED FINANCIAL STATEMENTS

(Unaudited)

12. REGULATORY MATTERS (Continued)

Our consolidated capital levels as of March 31, 2012 and December 31, 2011 include \$32.0 million of trust preferred securities issued by the trust in September 2004 and December 2004 subject to certain limitations. Under applicable Federal Reserve guidelines, the trust preferred securities constitute a restricted core capital element. The guidelines provide that the aggregate amount of restricted core elements that may be included in our Tier 1 capital must not exceed 25% of the sum of all core capital elements, including restricted core capital elements, net of goodwill less any associated deferred tax liability. Our ability to include the trust preferred securities in Tier 1 capital in accordance with the guidelines is not affected by the provision of the Dodd-Frank Act generally restricting such treatment, because (i) the trust preferred securities were issued before May 19, 2010, and (ii) our total consolidated assets as of December 31, 2009 were less than \$15.0 billion. As of March 31, 2012 and December 31, 2011, all \$32.0 million of the trust preferred securities were included in our consolidated Tier 1 capital.

Our and our bank's ability to pay cash and stock dividends is subject to limitations under various laws and regulations and to prudent and sound banking practices. In April 2010, we suspended payments of cash dividends on our common stock.

On April 4, 2012, we announced via a Form 8-K filed with the SEC that we repurchased 50 percent of the \$21.0 million in non-voting preferred stock issued in May 2009 to the U.S. Department of the Treasury under the Treasury's Capital Purchase Program, as part of the Troubled Asset Relief Program. We consummated the repurchase of the preferred stock following approval from the Federal Reserve and consultation with the Federal Deposit Insurance Corporation. To fund the repurchase, our bank paid us a cash dividend of approximately \$10.5 million on April 3, 2012. As part of the repurchase, we recorded a reduction of retained earnings of \$0.3 million on April 4, 2012 for the accelerated discount on the preferred stock which was being amortized over an original period of five years from the issuance date of May 15, 2009. On a pro-forma basis, whereby we assume the repurchase and cash dividend transactions had been consummated on March 31, 2012, our and our bank's regulatory capital ratios disclosed on the previous page would have declined by about 75 to 90 basis points.

Item 2. Management's Discussion and Analysis of Financial Condition and Results of Operations

Forward Looking Statements

This report contains forward-looking statements that are based on management's beliefs, assumptions, current expectations, estimates and projections about the financial services industry, the economy, and our company. Words such as anticipates, believes, estimates, expects, forecasts, intends, is likely, plans, projects, and variations of such words and similar expressions are intended to identify such forward-looking statements. These statements are not guarantees of future performance and involve certain risks, uncertainties and assumptions (Future Factors) that are difficult to predict with regard to timing, extent, likelihood and degree of occurrence. Therefore, actual results and outcomes may materially differ from what may be expressed or forecasted in such forward-looking statements. We undertake no obligation to update, amend, or clarify forward looking-statements, whether as a result of new information, future events (whether anticipated or unanticipated), or otherwise.

Future Factors include, among others, changes in interest rates and interest rate relationships; demand for products and services; the degree of competition by traditional and non-traditional competitors; changes in banking regulation or actions by bank regulators; changes in tax laws; changes in prices, levies, and assessments; the impact of technological advances; governmental and regulatory policy changes; the outcomes of contingencies; trends in customer behavior as well as their ability to repay loans; changes in local real estate values; changes in the national and local economies; and risk factors described in our annual report on Form 10-K for the year ended December 31, 2011 or in this report. These are representative of the Future Factors that could cause a difference between an ultimate actual outcome and a forward-looking statement.

Introduction

The following discussion compares the financial condition of Mercantile Bank Corporation and its consolidated subsidiaries, Mercantile Bank of Michigan (our bank), our bank's three subsidiaries, Mercantile Bank Mortgage Company, LLC (our mortgage company), Mercantile Bank Real Estate Co., LLC (our real estate company) and Mercantile Insurance Center, Inc. (our insurance company), at March 31, 2012 and December 31, 2011 and the results of operations for the three months ended March 31, 2012 and March 31, 2011. This discussion should be read in conjunction with the interim consolidated financial statements and footnotes included in this report. Unless the text clearly suggests otherwise, references in this report to us, we, our or the company include Mercantile Bank Corporation and its consolidated subsidiaries referred to above.

Critical Accounting Policies

Accounting principles generally accepted in the United States of America are complex and require us to apply significant judgment to various accounting, reporting and disclosure matters. We must use assumptions and estimates to apply these principles where actual measurements are not possible or practical. Management's Discussion and Analysis of Financial Condition and Results of Operations should be read in conjunction with our unaudited financial statements included in this report. For a discussion of our significant accounting policies, see Note 1 of the Notes to our Consolidated Financial Statements included on pages F-47 through F-54 in our Form 10-K for the fiscal year ended December 31, 2011 (Commission file number 000-26719). Our allowance for loan losses policy and accounting for income taxes are highly dependent upon subjective or complex judgments, assumptions and estimates. Changes in such estimates may have a significant impact on the financial statements, and actual results may differ from those estimates. We have reviewed the application of these policies with the Audit Committee of our Board of Directors.

Table of Contents

MERCANTILE BANK CORPORATION

Allowance for Loan Losses: The allowance for loan losses (allowance) is maintained at a level we believe is adequate to absorb probable incurred losses identified and inherent in the loan portfolio. Our evaluation of the adequacy of the allowance is an estimate based on past loan loss experience, the nature and volume of the loan portfolio, information about specific borrower situations and estimated collateral values, guidance from bank regulatory agencies, and assessments of the impact of current and anticipated economic conditions on the loan portfolio. Allocations of the allowance may be made for specific loans, but the entire allowance is available for any loan that, in our judgment, should be charged-off. Loan losses are charged against the allowance when we believe the uncollectability of a loan is likely. The balance of the allowance represents our best estimate, but significant downturns in circumstances relating to loan quality or economic conditions could result in a requirement for an increased allowance in the future. Likewise, an upturn in loan quality or improved economic conditions may result in a decline in the required allowance in the future. In either instance, unanticipated changes could have a significant impact on operating earnings.

The allowance is increased through a provision charged to operating expense. Uncollectable loans are charged-off through the allowance. Recoveries of loans previously charged-off are added to the allowance. A loan is considered impaired when it is probable that contractual interest and principal payments will not be collected either for the amounts or by the dates as scheduled in the loan agreement. Impairment is evaluated in aggregate for smaller-balance loans of similar nature such as residential mortgage, consumer and credit card loans, and on an individual loan basis for other loans. If a loan is impaired, a portion of the allowance is allocated so that the loan is reported, net, at the present value of estimated future cash flows using the loan's existing rate or at the fair value of collateral if repayment is expected solely from the collateral. The timing of obtaining outside appraisals varies, generally depending on the nature and complexity of the property being evaluated, general breadth of activity within the marketplace and the age of the most recent appraisal. For collateral dependent impaired loans, in most cases we obtain and use the as is value as indicated in the appraisal report, adjusting for any expected selling costs. In certain circumstances, we may internally update outside appraisals based on recent information impacting a particular or similar property, or due to identifiable trends (e.g., recent sales of similar properties) within our markets. The expected future cash flows exclude potential cash flows from certain guarantors. To the extent these guarantors provide repayments, a recovery would be recorded upon receipt. Loans are evaluated for impairment when payments are delayed, typically 30 days or more, or when serious deficiencies are identified within the credit relationship. Our policy for recognizing income on impaired loans is to accrue interest unless a loan is placed on nonaccrual status. We put loans into nonaccrual status when the full collection of principal and interest is not expected.

Income Tax Accounting: Current income tax liabilities or assets are established for the amount of taxes payable or refundable for the current year. In the preparation of income tax returns, tax positions are taken based on interpretation of federal and state income tax laws for which the outcome may be uncertain. We periodically review and evaluate the status of our tax positions and make adjustments as necessary. Deferred income tax liabilities and assets are also established for the future tax consequences of events that have been recognized in our financial statements or tax returns. A deferred income tax liability or asset is recognized for the estimated future tax effects attributable to temporary differences that can be carried forward (used) in future years. The valuation of our net deferred income tax asset is considered critical as it requires us to make estimates based on provisions of the enacted tax laws. The assessment of the realizability of the net deferred income tax asset involves the use of estimates, assumptions, interpretations and judgments concerning accounting pronouncements, federal and state tax codes and the extent of future taxable income. There can be no assurance that future events, such as court decisions, positions of federal and state tax authorities, and the extent of future taxable income will not differ from our current assessment, the impact of which could be significant to the consolidated results of operations and reported earnings.

Table of Contents

MERCANTILE BANK CORPORATION

Accounting guidance requires that we assess whether a valuation allowance should be established against our deferred tax assets based on the consideration of all available evidence using a more likely than not standard. In making such judgments, we consider both positive and negative evidence and analyze changes in near-term market conditions as well as other factors which may impact future operating results. Significant weight is given to evidence that can be objectively verified. During 2011, we returned to pre-tax profitability for four consecutive quarters. Additionally, we experienced lower provision expense, continued declines in nonperforming assets and problem asset administration costs, a higher net interest margin, a further strengthening of our regulatory capital ratios and additional reductions in wholesale funding. This positive evidence allowed us to conclude that, as of December 31, 2011, it was more likely than not that we returned to sustainable profitability in amounts sufficient to allow for realization of our deferred tax assets in future years. Consequently, we reversed the valuation allowance that we had previously determined necessary to carry against our entire net deferred tax asset starting on December 31, 2009.

Financial Overview

Over the past several years, our earnings performance was negatively impacted by substantial provisions to the allowance as well as administrative costs associated with problem assets. Ongoing state, regional and national economic struggles negatively impacted some of our borrowers' cash flows and underlying collateral values, leading to an elevated level of nonperforming assets, higher loan charge-offs and increased overall credit risk within our loan portfolio. We have worked with our borrowers to develop constructive dialogue to strengthen our relationships and enhance our ability to resolve complex issues. Although we have experienced significant improvement in our asset quality beginning in the latter part of 2010, in part due to modestly improving economic conditions, the environment for the banking industry will likely remain stressed until economic conditions further improve.

We recorded a net profit for the first quarter of 2012, our fifth consecutive quarterly net profit after over two years of quarterly losses. A significantly lower provision expense has primarily provided for the improved earnings performance; however, our improved earnings performance also reflects the many positive steps we have taken over the past several years to not only partially mitigate the impact of asset quality-related costs in the near term, but to benefit us on a longer-term basis as well. First, our net interest margin has improved as we have lowered local non-CD deposit rates and have replaced maturing higher-rate deposits and borrowed funds with lower-cost funds, while at the same time our commercial loan pricing initiatives have helped to offset the negative impact of a relatively high level of nonaccrual loans and more recently competitive loan pricing pressures. In addition, we are increasing our local deposit balances, reflecting the successful implementation of various initiatives, campaigns and product enhancements. The local deposit growth, combined with the reduction of loans outstanding, have provided for a substantial reduction of, and reliance on, wholesale funds. Next, our regulatory risk-based capital ratios have increased substantially, reflecting the impact of the net income recorded during the past five quarters, the sale of preferred stock under the Department of Treasury's Capital Purchase Program and the reduction of loans outstanding, which have more than offset the impact of our net losses recorded during 2010 and 2009. Lastly, reductions in problem asset administration costs and Federal Deposit Insurance Corporation (FDIC) insurance assessments, combined with other cost-savings initiatives, have provided for a significantly reduced level of overhead costs.

Table of Contents

MERCANTILE BANK CORPORATION

Our asset quality metrics remain on an improving trend, and we are optimistic that the positive trend will continue. In aggregate dollar amounts, nonperforming asset levels have declined almost 56% since the peak level at March 31, 2010, and at March 31, 2012, were at the lowest level since September 30, 2008. Progress in the stabilization of economic and real estate market conditions has provided for numerous loan rating upgrades, significantly lower volumes of loan rating downgrades and reduced net loan charge-offs, allowing for substantially lower provision expense. We expect a continuation of improved market conditions will provide for lower future period provision expense and problem asset administration costs when compared to levels over the past several years.

Subsequent Events

On April 4, 2012, we announced via a Form 8-K filed with the SEC that we repurchased 50 percent of the \$21.0 million in non-voting preferred stock issued in May 2009 to the U.S. Department of the Treasury under the Treasury's Capital Purchase Program, as part of the Troubled Asset Relief Program. We consummated the repurchase of the preferred stock following approval from the Federal Reserve and consultation with the FDIC. To fund the repurchase, our bank paid us a cash dividend of approximately \$10.5 million on April 3, 2012. On a pro-forma basis, whereby we assume the repurchase and cash dividend transactions had been consummated on March 31, 2012, our and our bank's regulatory capital ratios disclosed in Note 12 would have declined by about 75 to 90 basis points.

Financial Condition

During the first three months of 2012, our total assets decreased \$31.6 million, and totaled \$1.40 billion as of March 31, 2012. The decline in total assets was comprised primarily of a \$20.7 million reduction in total loans and a \$23.0 million decrease in securities, more than offsetting an \$8.6 million increase in cash and cash equivalents. Total deposits declined \$18.6 million and securities sold under agreements to repurchase (repurchase agreements) decreased \$15.1 million.

Our loan portfolio is primarily comprised of commercial loans. Commercial loans declined \$20.5 million during the first three months of 2012, and at March 31, 2012 totaled \$976.5 million, or 92.8% of the loan portfolio. The decline in outstanding balances primarily reflects the impact of a concerted effort on our part to reduce the level of nonperforming commercial loans and commercial loans on our watch list (i.e., loans internally graded 7 and 8 - see Note 3 for additional information on our internal commercial loan grading program), as well as exposure to certain non-owner occupied commercial real estate (CRE) lending. We did extend credit to several new commercial loan relationships and saw increased activity from some of our existing commercial loan customers during the first quarter of 2012; however, due in part to the ongoing sluggishness in business activity in our markets, there was no net growth in our commercial loan portfolio during the quarter. During the first three months of 2012, commercial loans collateralized by owner-occupied CRE and construction loans to finance the building of owner-occupied CRE increased \$6.9 million. During the same time period, nonperforming commercial loans declined \$6.5 million and commercial loans collateralized by non-owner occupied CRE decreased \$17.7 million. Our systematic approach to reducing our exposure to certain non-owner occupied CRE lending will be prolonged, given the nature of CRE lending and depressed economic conditions; however, we believe that such a reduction is in our best interest when taking into account the increased inherent credit risk and nominal deposit balances generally associated with the targeted borrowing relationships. Our commercial and industrial (C&I) loan portfolio declined \$6.8 million during the first three months of 2012, primarily reflecting scheduled principal payments on equipment loans and limited new term debt requests. Commercial line of credit usage was relatively unchanged during the quarter. We would expect to see an increase in commercial line of credit usage and new term debt requests when economic conditions improve.

Table of Contents

MERCANTILE BANK CORPORATION

The commercial loan portfolio represents loans to businesses generally located within our market areas. Approximately 73% of the commercial loan portfolio is primarily secured by real estate properties, with the remaining generally secured by other business assets such as accounts receivable, inventory and equipment. The continued concentration of the loan portfolio in commercial loans is consistent with our strategy of focusing a substantial amount of our efforts on commercial banking. Corporate and business lending is an area of expertise for our senior management team, and our commercial lenders have extensive commercial lending experience, with most having at least ten years experience. Of each of the loan categories that we originate, commercial loans are most efficiently originated and managed, thus limiting overhead costs by necessitating the attention of fewer employees. Our commercial lending business generates the largest portion of local deposits and is our primary source of demand deposits.

The following table summarizes our loans secured by real estate, excluding residential mortgage loans representing permanent financing of owner occupied dwellings and home equity lines of credit:

	3/31/12	12/31/11	9/30/11	6/30/11	3/31/11
Residential-Related:					
Vacant Land	\$ 12,837,000	\$ 13,124,000	\$ 13,264,000	\$ 13,484,000	\$ 16,321,000
Land Development	16,173,000	17,007,000	17,441,000	18,134,000	27,171,000
Construction	4,318,000	4,923,000	4,647,000	4,706,000	4,906,000
	33,328,000	35,054,000	35,352,000	36,324,000	48,398,000
Comm 1 Non-Owner Occupied:					
Vacant Land	9,255,000	10,555,000	11,082,000	12,639,000	13,669,000
Land Development	14,418,000	14,486,000	14,541,000	16,348,000	16,492,000
Construction	16,936,000	13,615,000	11,061,000	10,709,000	10,046,000
Commercial Buildings	357,128,000	376,805,000	397,279,000	429,708,000	484,629,000
	397,737,000	415,461,000	433,963,000	469,404,000	524,836,000
Comm 1 Owner Occupied:					
Construction	6,198,000	4,213,000	2,986,000	1,517,000	1,404,000
Commercial Buildings	273,376,000	268,479,000	269,776,000	264,848,000	273,739,000
	279,574,000	272,692,000	272,762,000	266,365,000	275,143,000
Total	\$ 710,639,000	\$ 723,207,000	\$ 742,077,000	\$ 772,093,000	\$ 848,377,000

Residential mortgage loans and consumer loans declined in aggregate \$0.3 million during the first three months of 2012, and at March 31, 2012, totaled \$75.2 million, or 7.2% of the total loan portfolio. Although the residential mortgage loan and consumer loan portfolios may increase in future periods, we expect the commercial sector of the lending efforts and resultant assets to remain the dominant loan portfolio category.

Table of Contents

MERCANTILE BANK CORPORATION

Our credit policies establish guidelines to manage credit risk and asset quality. These guidelines include loan review and early identification of problem loans to provide appropriate loan portfolio administration. The credit policies and procedures are meant to minimize the risk and uncertainties inherent in lending. In following these policies and procedures, we must rely on estimates, appraisals and evaluations of loans and the possibility that changes in these could occur quickly because of changing economic conditions. Identified problem loans, which exhibit characteristics (financial or otherwise) that could cause the loans to become nonperforming or require restructuring in the future, are included on the internal watch list. Senior management and the Board of Directors review this list regularly. Market value estimates of collateral on impaired loans, as well as on foreclosed and repossessed assets, are reviewed periodically; however, we have a process in place to monitor whether value estimates at each quarter-end are reflective of current market conditions. Our credit policies establish criteria for obtaining appraisals and determining internal value estimates. We may also adjust outside and internal valuations based on identifiable trends within our markets, such as recent sales of similar properties or assets, listing prices and offers received. In addition, we may discount certain appraised and internal value estimates to address distressed market conditions.

The levels of net loan charge-offs and nonperforming assets have been elevated since early 2007. The substantial and rapid collapse of the residential real estate market that began in 2007 had a significant negative impact on the residential real estate development lending portion of our business. The resulting decline in real estate prices and slowdown in sales stretched the cash flow of our local developers and eroded the value of our underlying collateral, which caused elevated levels of nonperforming assets and net loan charge-offs. Since 2007, we have also witnessed stressed economic conditions in Michigan and throughout the country. The resulting decline in business revenue negatively impacted the cash flows of many of our borrowers, some to the point where loan payments became past due. In addition, real estate prices have fallen significantly, thereby exposing us to larger-than-typical losses in those instances where the sale of collateral is the primary source of repayment. Also during this time, we have seen deterioration in guarantors' financial capacities to fund deficient cash flows and reduce or eliminate collateral deficiencies.

Throughout 2008, we experienced a rapid deterioration in a number of commercial loan relationships which previously had been performing satisfactorily. Analysis of certain commercial borrowers revealed a reduced capability on the part of these borrowers to make required payments as indicated by factors such as delinquent loan payments, diminished cash flow, deteriorating financial performance, or past due property taxes, and in the case of commercial and residential development projects slow absorption or sales trends. In addition, commercial real estate is the primary source of collateral for many of these borrowing relationships and updated evaluations and appraisals in many cases reflected significant declines from the original estimated values.

Throughout 2009, 2010, 2011 and the first three months of 2012, we saw a continuation of the stresses caused by the poor economic conditions, especially in the CRE markets. High vacancy rates or slow absorption have resulted in inadequate cash flow generated from some real estate projects we have financed, and have required guarantors to provide personal funds to make full contractual loan payments and pay other operating costs. In some cases, the guarantors' cash and other liquid reserves have become seriously diminished. In other cases, sale of the collateral, either by the borrower or us, is our primary source of repayment.

We are, however, encouraged by the apparent credit quality stabilization within our loan portfolio that began during the latter part of 2010. After a period of significant and ongoing increases from 2007 through September 30, 2009, the level of nonperforming assets was relatively unchanged through June 30, 2010 and then has generally declined through the end of the 2012 first quarter.

Table of Contents

MERCANTILE BANK CORPORATION

Of particular note are the reduced level of additions to the nonperforming asset category and increased level of interest in, and sales of, foreclosed properties and assets securing nonperforming loans.

As of March 31, 2012, nonperforming assets totaled \$52.2 million, or 3.7% of total assets, compared to \$60.4 million (4.2% of total assets) and \$76.1 million (4.8% of total assets) as of December 31, 2011 and March 31, 2011, respectively. The \$8.2 million reduction during the first three months of 2012 and the \$23.9 million decline during the twelve-month period ended March 31, 2012, are associated with assets in almost all major categories as reflected in the table below. As of March 31, 2012, nonperforming loans and foreclosed properties associated with the construction and development of residential real-estate totaled \$5.0 million, reflecting reductions of \$1.9 million and \$11.5 million during the past three and twelve months, respectively. Nonperforming loans secured by, and foreclosed properties consisting of, owner occupied CRE properties totaled \$7.7 million at March 31, 2012, reflecting reductions of \$3.0 million and \$5.7 million during the past three and twelve months, respectively.

The following table provides a breakdown of nonperforming assets by property type:

	3/31/12	12/31/11	9/30/11	6/30/11	3/31/11
Residential Real Estate:

The following table provides a reconciliation of nonperforming assets:

	1st Qtr 2012	4th Qtr 2011	3rd Qtr 2011	2nd Qtr 2011	1st Qtr 2011
Beginning balance	\$ 60,356,000	\$ 56,827,000	\$ 61,895,000	\$ 76,089,000	\$ 86,119,000
Additions	9,651,000	10,188,000	3,740,000	6,478,000	3,848,000
Returns to performing status	(737,000)	0	0	0	(766,000)
Principal payments	(5,533,000)	(2,115,000)	(5,058,000)	(12,067,000)	(5,555,000)
Sale proceeds	(9,282,000)	(3,038,000)	(2,670,000)	(2,547,000)	(2,085,000)
Loan charge-offs	(1,691,000)	(890,000)	(476,000)	(5,393,000)	(4,800,000)
Valuation write-downs	(590,000)	(616,000)	(604,000)	(665,000)	(672,000)
Total	\$ 52,174,000	\$ 60,356,000	\$ 56,827,000	\$ 61,895,000	\$ 76,089,000

Net loan charge-offs during the first three months of 2012 totaled \$5.6 million, or an annualized 2.1% of average total loans. For comparative purposes, net loan charge-offs equaled 1.4%, 2.4% and 2.2% of average loans during 2011, 2010 and 2009, respectively. Approximately 46% of the gross loan charge-offs during the first three months of 2012 represent the charge-off of specific reserves that were created through provision expense in prior periods, and about 61% is related to two non-owner occupied CRE loan relationships. Net loan charge-offs may remain elevated in the next several quarters compared to historical averages due to the higher volume of nonperforming loans and stressed economic conditions.

The following table provides a breakdown of net loan charge-offs (recoveries) by collateral type:

	\$60,356,000 1st Qtr 2012	\$60,356,000 4th Qtr 2011	\$60,356,000 3rd Qtr 2011	\$60,356,000 2nd Qtr 2011	\$60,356,000 1st Qtr 2011

Table of Contents

MERCANTILE BANK CORPORATION

In each accounting period, we adjust the allowance to the amount we believe is necessary to maintain the allowance at an adequate level. Through the loan review and credit departments, we establish portions of the allowance based on specifically identifiable problem loans. The evaluation of the allowance is further based on, but not limited to, consideration of the internally prepared Allowance Analysis, loan loss migration analysis, composition of the loan portfolio, third party analysis of the loan administration processes and portfolio, and general economic conditions.

The Allowance Analysis applies reserve allocation factors to non-impaired outstanding loan balances, which is combined with specific reserves to calculate an overall allowance dollar amount. For non-impaired commercial loans, which continue to comprise a vast majority of our total loans, reserve allocation factors are based on the loan ratings as determined by our standardized grade paradigms and by loan purpose. We have divided our commercial loan portfolio into five classes: 1) commercial and industrial loans; 2) vacant land, land development and residential construction loans; 3) owner occupied real estate loans; 4) non-owner occupied real estate loans; and 5) multi-family and residential rental property loans. The reserve allocation factors are primarily based on the historical trends of net loan charge-offs through a migration analysis whereby net loan losses are tracked via assigned grades over various time periods, with adjustments made for environmental factors reflecting the current status of, or recent changes in, items such as: lending policies and procedures; economic conditions; nature and volume of the loan portfolio; experience, ability and depth of management and lending staff; volume and severity of past due, nonaccrual and adversely classified loans; effectiveness of the loan review program; value of underlying collateral; loan concentrations; and other external factors such as competition and regulatory environment. Adjustments for specific lending relationships, particularly impaired loans, are made on a case-by-case basis. Non-impaired retail loan reserve allocations are determined in a similar fashion as those for non-impaired commercial loans, except that retail loans are segmented by type of credit and not a grading system. We regularly review the Allowance Analysis and make adjustments periodically based upon identifiable trends and experience.

A migration analysis is completed quarterly to assist us in determining appropriate reserve allocation factors for non-impaired commercial loans. Our migration takes into account various time periods, and while we generally place most weight on the eight-quarter time frame as that period is close to the average duration of our loan portfolio, consideration is given to other time periods as part of our assessment. Although the migration analysis provides an accurate historical accounting of our net loan losses, it is not able to fully account for environmental factors that will also very likely impact the collectability of our commercial loans as of any quarter-end date. Therefore, we incorporate the environmental factors as adjustments to the historical data.

Environmental factors include both internal and external items. We believe the most significant internal environmental factor is our credit culture and the relative aggressiveness in assigning and revising commercial loan risk ratings. Although we have been consistent in our approach to commercial loan ratings, ongoing stressed economic conditions have resulted in an even higher sense of aggressiveness with regards to the downgrading of lending relationships. In addition, we made revisions to our grading paradigms in early 2009 that mathematically resulted in commercial loan relationships being more quickly downgraded when signs of stress are noted, such as slower sales activity for construction and land development CRE relationships and reduced operating performance/cash flow coverage for C&I relationships. These changes, coupled with the stressed economic environment, have resulted in significant downgrades and the need for substantial provisions to the allowance over the past several years. To more effectively manage our commercial loan portfolio, we created a specific group tasked with managing our most distressed lending relationships.

Table of Contents

MERCANTILE BANK CORPORATION

The most significant external environmental factor is the assessment of the current economic environment and the resulting implications on our commercial loan portfolio. Currently, we believe conditions remain stressed for non-owner occupied CRE; however, recent data and performance reflect a level of stability, and in some cases improvement, in the C&I class of our loan portfolio.

The primary risk elements with respect to commercial loans are the financial condition of the borrower, the sufficiency of collateral, and timeliness of scheduled payments. We have a policy of requesting and reviewing periodic financial statements from commercial loan customers, and we have a disciplined and formalized review of the existence of collateral and its value. The primary risk element with respect to each residential real estate loan and consumer loan is the timeliness of scheduled payments. We have a reporting system that monitors past due loans and have adopted policies to pursue creditor's rights in order to preserve our collateral position.

Reflecting the stressed economic conditions and resulting negative impact on our loan portfolio, we have substantially increased the allowance as a percent of the loan portfolio over the past several years. The allowance equaled \$30.9 million, or 2.9% of total loans outstanding, as of March 31, 2012, compared to 3.4%, 3.6%, 3.1%, 1.5% and 1.4% at year-end 2011, 2010, 2009, 2008 and 2007, respectively. Approximately 55% of the decline in the level of allowance to total loans outstanding during the first quarter of 2012 reflects the charge-off of specific reserves that were created in prior periods, while the rest of the decline primarily results from commercial loan upgrades during the first quarter and reductions in most reserve allocation factors on non-impaired commercial loans resulting from the impact of lower net loan charge-offs in recent periods on our migration calculations. As of March 31, 2012, the allowance was comprised of \$15.9 million in general reserves relating to non-impaired loans, \$4.9 million in specific reserve allocations relating to nonaccrual loans, and \$10.1 million in specific reserves on other loans, primarily accruing loans designated as troubled debt restructurings. Impaired loans with an aggregate carrying value of \$26.8 million as of March 31, 2012 had been subject to previous partial charge-offs aggregating \$26.5 million. Those partial charge-offs were recorded as follows: \$6.3 million during the first three months of 2012, \$6.7 million in 2011, \$9.2 million in 2010, \$3.4 million in 2009 and \$0.9 million in 2008. As of March 31, 2012, specific reserves allocated to impaired loans that had been subject to a previous partial charge-off totaled \$2.7 million.

Although we believe the allowance is adequate to absorb loan losses as they arise, there can be no assurance that we will not sustain loan losses in any given period that could be substantial in relation to, or greater than, the size of the allowance.

Securities decreased by \$23.0 million during the first three months of 2012, totaling \$161.9 million as of March 31, 2012. Proceeds from called U.S. Government agency bonds during the first three months of 2012 totaled \$34.1 million, with another \$3.0 million from principal paydowns on mortgage-backed securities and \$2.9 million from paid-off and matured Michigan Strategic Fund bonds. Purchases during the first three months of 2012, consisting almost exclusively of U.S. Government agency bonds, totaled \$18.0 million. At March 31, 2012, the portfolio was comprised of U.S. Government agency bonds (44%), U.S. Government agency issued or guaranteed mortgage-backed securities (19%), tax-exempt municipal general obligation and revenue bonds (20%), Michigan Strategic Fund bonds (9%), FHLB stock (7%) and mutual funds (1%). All of our securities, exclusive of FHLB stock, are currently designated as available for sale, and are therefore stated at fair value. The fair value of securities designated as available for sale at March 31, 2012 totaled \$150.0 million, including a net unrealized gain of \$4.8 million. We maintain the securities portfolio at levels to provide adequate pledging and secondary liquidity for our daily operations. In addition, the securities portfolio serves a primary interest rate risk management function.

Table of Contents

MERCANTILE BANK CORPORATION

FHLB stock totaled \$12.0 million as of March 31, 2012, unchanged from December 31, 2011. Our investment in FHLB stock is necessary to engage in their advance and other financing programs. We received a quarterly cash dividend at a rate of 3.00% per annum during the first quarter of 2012 and at average rates of 2.50% and 2.00% per annum during 2011 and 2010, respectively, and we expect a cash dividend will continue to be paid in future quarters.

Market values on our U.S. Government agency bonds, mortgage-backed securities issued or guaranteed by U.S. Government agencies and tax-exempt general obligation and revenue municipal bonds are determined on a monthly basis with the assistance of a third party vendor. Evaluated pricing models that vary by type of security and incorporate available market data are utilized. Standard inputs include issuer and type of security, benchmark yields, reported trades, broker/dealer quotes and issuer spreads. The market value of other securities is estimated at carrying value as those financial instruments are generally bought and sold at par value. We believe our valuation methodology provides for a reasonable estimation of market value, and that it is consistent with the requirements of accounting guidelines.

Federal funds sold, consisting of excess funds sold overnight to a correspondent bank, along with investments in interest-bearing deposits at correspondent and other banks, are used to manage daily liquidity needs and interest rate sensitivity. During the first three months of 2012, the average balance of these funds equaled \$60.1 million, or 4.6% of average earning assets, compared to the 6.1%, 4.5% and 3.0% maintained during 2011, 2010 and 2009, respectively. The level maintained during these time periods is considerably higher than our historical average of less than 1.0%. Given the stressed market and economic conditions, we made the decision in early 2009 to operate with a higher than traditional balance of federal funds sold and interest-bearing deposits. Reflecting our improved operating performance and financial condition, along with modestly improved economic conditions, we did reduce the level of average federal funds sold during the first three months of 2012 when compared to the previous three years, and we currently expect to maintain a similar balance of federal funds sold for at least the remainder of 2012.

Premises and equipment at March 31, 2012 equaled \$26.5 million, a decrease of \$0.3 million during the first three months of 2012. Purchases of premises and equipment during the first three months of 2012 totaled only \$0.1 million, while depreciation expense totaled \$0.4 million. On December 30, 2009, all FDIC-insured financial institutions were required to prepay estimated FDIC deposit insurance assessments for the fourth quarter of 2009 and the years 2010, 2011 and 2012. The amount we paid equaled \$16.3 million, which is being expensed over the future quarterly assessment periods. As of March 31, 2012, the balance of this prepaid asset was \$9.1 million. Under current regulation, any unused portion of the amount prepaid remaining after payment of amounts due on June 30, 2013 will be returned to us by the FDIC.

Foreclosed and repossessed assets totaled \$13.5 million at March 31, 2012, compared to \$15.3 million on December 31, 2011. The \$1.8 million decrease during the first three months of 2012 consisted of \$9.7 million in sales proceeds and \$0.2 million in valuation write-downs and net loss on sales, which were partially offset by \$8.1 million in transfers from the loan portfolio. We expect foreclosed and repossessed assets to remain at elevated levels as we move through the stressed economic environment and in certain situations elect to foreclose or repossess collateral. The State of Michigan has a relatively protracted foreclosure process that generally takes six to twelve months before deed is obtained. While we expect further transfers from loans to foreclosed and repossessed assets in future periods reflecting our collection efforts on impaired lending relationships, we are hopeful that the increased sales activity we witnessed during the past several quarters will continue and limit the overall increase in and average balance of this nonperforming asset category.

Table of Contents

MERCANTILE BANK CORPORATION

Deposits decreased \$18.6 million during the first three months of 2012, totaling \$1.09 billion at March 31, 2012. Local deposits increased \$5.1 million, while out-of-area deposits decreased \$23.7 million. As a percent of total deposits, local deposits equaled 71.9% on March 31, 2012, compared to 70.3%, 60.0%, 48.3% and 29.4% on December 31, 2011, 2010, 2009 and 2008, respectively. In comparing balances as of March 31, 2012 to those at December 31, 2008, total deposits have declined by \$506.1 million, consisting of a \$316.3 million increase in local deposits and an \$822.4 million decrease in out-of-area deposits. The decline in out-of-area deposits primarily results from the decline in total loans and the increase in local deposits. The increase in local deposits reflects various programs and initiatives we have implemented over the past several years, including: certificate of deposit campaign; implementation of several deposit-gathering initiatives in our commercial lending function; introduction of new deposit-related products and services; and the continuation of providing our customers with the latest in technological advances that give improved information, convenience and timeliness.

Noninterest-bearing checking deposit accounts further increased during the first three months of 2012, having increased during 2011 after remaining relatively stable over the prior several years. Noninterest-bearing checking accounts averaged \$145.8 million during the first three months of 2012, compared to an average balance of \$137.0 million during 2011, and \$110 million to \$120 million over the prior several years. A majority of the increase represents transfers from our repurchase agreement product, reflecting a change in rates offered on the repurchase agreement product whereby for certain lower-balance customers, maintaining their relationship with us in a noninterest-bearing checking account was less expensive for them than keeping their funds in the repurchase agreement product when taking into account the rate paid and fees assessed.

Local interest-bearing checking accounts, although declining slightly by \$2.9 million during the first three months of 2012, are up \$126.6 million since year-end 2008. Money market deposit accounts increased \$6.1 million during the first three months of 2012, and are up \$126.6 million since year-end 2008. The increases in both interest-bearing checking accounts and money market deposit accounts reflect our enhanced marketing program and relatively aggressive rates which resulted in many new individual, business and municipality deposits and increased balances from existing depositors, as well as transfers from maturing certificates of deposit. Savings deposits decreased \$1.2 million during the first three months of 2012, and are down \$18.7 million since year-end 2008. A vast majority of the decline in savings accounts reflect periodic deposits and withdrawals from several local municipal customers that tend to correspond with the receipt and use of property tax collections, as well as from certain municipal customers transferring funds from savings accounts to certificates of deposit, and individuals and businesses transferring funds from savings accounts to interest-bearing checking accounts and money market deposit accounts.

Certificates of deposit purchased by customers located within our market areas declined \$1.5 million during the first three months of 2012, but have increased \$40.8 million since year-end 2008. A majority of the increase since year-end 2008 reflects the aforementioned savings accounts transfers from certain municipal customers.

Table of Contents

MERCANTILE BANK CORPORATION

Deposits obtained from customers located outside of our market areas decreased \$23.8 million during the first three months of 2012, and have declined \$822.5 million since year-end 2008. As of March 31, 2012, out-of-area deposits totaled \$306.8 million. Out-of-area deposits primarily consist of certificates of deposit obtained from depositors located outside our market areas and placed by deposit brokers for a fee, but also include certificates of deposit obtained from the deposit owners directly. The owners of out-of-area deposits include individuals, businesses and municipalities located throughout the United States. In addition, in early 2011 we established an interest-bearing checking account relationship with an out-of-area depositor engaged in the management of retirement accounts. This custodial relationship totaled \$25.0 million as of March 31, 2012, and is expected to remain relatively stable in future periods. We expect this to be a long-term relationship. The significant decline in out-of-area deposits since year-end 2008 primarily reflects the influx of cash resulting from the reduction in total loans and from the increase in local deposits.

Repurchase agreements decreased \$15.1 million during the first three months of 2012, totaling \$57.4 million as of March 31, 2012. A majority of the decrease reflects seasonal declines in balances as business customers use funds for tax and bonus payments during the early part of the calendar year. Year-end balances are typically high points in this account. Repurchase agreements declined \$44.4 million during 2011, a vast majority of which reflecting the aforementioned transfers to noninterest-bearing checking accounts. As part of our sweep account program, collected funds from certain business noninterest-bearing checking accounts are invested into over-night interest-bearing repurchase agreements. Such repurchase agreements are not deposit accounts and are not afforded federal deposit insurance.

FHLB advances were unchanged during the first three months of 2012, but are down \$225.0 million since year-end 2008. As of March 31, 2012, FHLB advances totaled \$45.0 million. The decline in FHLB advances since year-end 2008 primarily reflects the influx of cash resulting from the reduction in total loans and from the increase in local deposits. The FHLB advances are collateralized by residential mortgage loans, first mortgage liens on multi-family residential property loans, first mortgage liens on commercial real estate property loans, and substantially all other assets of our bank, under a blanket lien arrangement. Our borrowing line of credit as of March 31, 2012 totaled about \$89 million, with availability approximating \$40 million.

Liquidity

Liquidity is measured by our ability to raise funds through deposits, borrowed funds, capital or cash flow from the repayment of loans and securities. These funds are used to fund loans, meet deposit withdrawals, maintain reserve requirements and operate our company. Liquidity is primarily achieved through local and out-of-area deposits and liquid assets such as securities available for sale, matured and called securities, federal funds sold and interest-bearing balances. Asset and liability management is the process of managing our balance sheet to achieve a mix of earning assets and liabilities that maximizes profitability, while providing adequate liquidity.

To assist in providing needed funds, we have regularly obtained monies from wholesale funding sources. Wholesale funds, primarily comprised of deposits from customers outside of our market areas and advances from the FHLB, totaled \$351.8 million, or 29.4% of combined deposits and borrowed funds, as of March 31, 2012, compared to \$375.5 million, or 30.5% of combined deposits and borrowed funds as of December 31, 2011, and \$1.41 billion, or 71.5% of combined deposits and borrowed funds as of December 31, 2008. The significant decline since year-end 2008 primarily reflects the influx of cash resulting from the reduction in total loans and from increased local deposits.

Table of Contents

MERCANTILE BANK CORPORATION

Although local deposits have generally increased as new business, municipality and individual deposit relationships are established and as existing customers increase the balances in their accounts, and we witnessed significant local deposit growth during the past several years, some reliance on wholesale funds will likely remain. As part of our current interest rate risk management strategy, virtually the entire amount of the approximate \$85 million in wholesale funds obtained during the first three months of 2012 has a fixed interest rate and mature within three to five years, reflecting the fact that a majority of commercial loans we have extended since the beginning of 2011 have a fixed interest rate.

Wholesale funds are generally a lower all-in cost source of funds when compared to the interest rates that would have to be offered in our local markets to generate a commensurate level of funds. Interest rates paid on new out-of-area deposits and FHLB advances have historically been similar to interest rates paid on new certificates of deposit issued to local customers. In addition, the overhead costs associated with wholesale funds are considerably less than the overhead costs that would be incurred to attract and administer a similar level of local deposits, especially if the estimated costs of a needed expanded branching network were taken into account. We believe the relatively low overhead costs reflecting our limited branch network mitigate our reliance on wholesale funds and resulting negative impact on our net interest margin.

As part of our sweep account program, collected funds from certain business noninterest-bearing checking accounts are invested into over-night interest-bearing repurchase agreements. Such repurchase agreements are not deposit accounts and are not afforded federal deposit insurance. Repurchase agreements decreased \$15.1 million during the first three months of 2012, totaling \$57.4 million as of March 31, 2012. A majority of the decrease reflects seasonal declines in balances as business customers use funds for tax and bonus payments during the early part of the calendar year. Year-end balances are typically high points in this account. Repurchase agreements declined \$44.4 million during 2011, a vast majority of which reflects the aforementioned transfers to noninterest-bearing checking accounts. Information regarding our repurchase agreements as of March 31, 2012 and during the first three months of 2012 is as follows:

Outstanding balance at March 31, 2012	\$ 57,440,000
Weighted average interest rate at March 31, 2012	0.32%
Maximum daily balance three months ended March 31, 2012	\$ 73,054,000
Average daily balance for three months ended March 31, 2012	\$ 64,716,000
Weighted average interest rate for three months ended March 31, 2012	0.31%

As a member of the FHLB, we have access to the FHLB advance borrowing programs. FHLB advances were unchanged during the first three months of 2012, but are down \$225.0 million since year-end 2008. As of March 31, 2012, FHLB advances totaled \$45.0 million. The decline in FHLB advances since year-end 2008 primarily reflects the influx of cash resulting from the reduction in total loans and from the increase in local deposits. Based on available collateral at March 31, 2012, we could borrow an additional \$40.0 million.

Table of Contents

MERCANTILE BANK CORPORATION

We also have the ability to borrow up to \$38.0 million on a daily basis through correspondent banks using established unsecured federal funds purchased lines of credit. At no time during the first three months of 2012 did we access the federal funds purchased lines of credit; in fact, we have not accessed the lines of credit since January of 2010. In contrast, federal funds sold averaged \$50.0 million during the first three months of 2012 and \$78.6 million during all of 2011, with another \$10.1 million invested in interest-bearing deposits at correspondent banks during the first three months of 2012 and \$9.7 million during all of 2011. Given the stressed market and economic conditions, we made the decision in early 2009 to operate with a higher than traditional balance of federal funds sold and interest-bearing deposits. Reflecting our improved operating performance and financial condition, along with modestly improved economic conditions, we did reduce the level of average federal funds sold during the first three months of 2012 when compared to the previous three years, and we currently expect to maintain a similar balance of federal funds sold for at least the remainder of 2012. As a result, we expect the use of our federal funds purchased lines of credit, in at least the near future, will be rare, if at all.

We have a line of credit through the Discount Window of the Federal Reserve Bank of Chicago. Using a substantial majority of our tax-exempt municipal securities as collateral, we could have borrowed up to \$26.6 million for terms of 1 to 28 days at March 31, 2012. We did not utilize this line of credit during the first three months of 2012 or at any time during 2011, 2010 or 2009, and do not plan to access this line of credit in future periods.

The following table reflects, as of March 31, 2012, significant fixed and determinable contractual obligations to third parties by payment date, excluding accrued interest:

	One Year or Less	One to Three Years	Three to Five Years	Over Five Years	Total
Deposits without a stated maturity	\$ 536,279,000	\$ 0	\$ 0	\$ 0	\$ 536,279,000
Certificates of deposit	300,646,000	130,903,000	125,606,000	0	557,155,000
Short-term borrowings	57,440,000	0	0	0	57,440,000
Federal Home Loan Bank advances	20,000,000	15,000,000	10,000,000	0	45,000,000
Subordinated debentures	0	0	0	32,990,000	32,990,000
Other borrowed money	0	0	0	1,414,000	1,414,000

In addition to normal loan funding and deposit flow, we must maintain liquidity to meet the demands of certain unfunded loan commitments and standby letters of credit. As of March 31, 2012, we had a total of \$266.1 million in unfunded loan commitments and \$8.2 million in unfunded standby letters of credit. Of the total unfunded loan commitments, \$211.4 million were commitments available as lines of credit to be drawn at any time as customers' cash needs vary, and \$54.7 million were for loan commitments expected to close and become funded within the next twelve months. The level of commitments to make loans over the past several years had declined significantly when compared to historical levels, primarily reflecting stressed economic conditions; however, the \$54.7 million level at March 31, 2012 is relatively high when compared to the levels over the past several years. The increase primarily reflects the impact of our improved operating performance and financial condition, expanded sales efforts and modestly improved economic conditions. We regularly monitor fluctuations in loan balances and commitment levels, and include such data in our overall liquidity management.

Table of Contents

MERCANTILE BANK CORPORATION

We monitor our liquidity position and funding strategies on an ongoing basis, but recognize that unexpected events, changes in economic or market conditions, a reduction in earnings performance, declining capital levels or situations beyond our control could cause liquidity challenges. While we believe it is unlikely that a funding crisis of any significant degree is likely to materialize, we have developed a comprehensive contingency funding plan that provides a framework for meeting liquidity disruptions.

Capital Resources

Shareholders' equity is a noninterest-bearing source of funds that can provide support for asset growth. Shareholders' equity was \$167.1 million at March 31, 2012, compared to \$165.0 million at December 31, 2011. The \$2.1 million increase during the first three months of 2012 is primarily due to net income attributable to common shares of \$2.6 million, which was partially offset by a \$0.7 million decline in the market value of our available for sale securities portfolio.

The increase in shareholders' equity during the first three months of 2012 provided for improved regulatory capital ratios, and our bank remains well capitalized. As of March 31, 2012, our bank's total risk-based capital ratio was 16.1%, compared to 15.5% at December 31, 2011. Our bank's total regulatory capital, consisting of shareholders' equity plus a portion of the allowance, increased by \$2.1 million during the first three months of 2012, reflecting net income of \$3.2 million, \$1.6 million in cash dividends paid, a \$1.0 million increase in eligible net deferred tax asset, and a reduction of \$0.5 million in eligible allowance primarily due to a decline in total risk-weighted assets. In addition to the increased total regulatory capital, our bank's total risk-based capital ratio increased due to a decline of \$32.9 million in total risk-weighted assets, primarily resulting from a reduction in commercial loans. As of March 31, 2012, our bank's total regulatory capital equaled \$190.5 million, or approximately \$72 million in excess of the 10.0% minimum which is among the requirements to be categorized as well capitalized. Our and our bank's capital ratios as of March 31, 2012 and December 31, 2011 are disclosed in Note 12 of the Notes to Consolidated Financial Statements.

On April 4, 2012, we announced via a Form 8-K filed with the SEC that we repurchased 50 percent of the \$21.0 million in non-voting preferred stock issued in May 2009 to the U.S. Department of the Treasury under the Treasury's Capital Purchase Program, as part of the Troubled Asset Relief Program. We consummated the repurchase of the preferred stock following approval from the Federal Reserve and consultation with the FDIC. To fund the repurchase, our bank paid us a cash dividend of approximately \$10.5 million on April 3, 2012. As part of the repurchase, we recorded a reduction of retained earnings of \$0.3 million on April 4, 2012 for the accelerated discount on the preferred stock which was being amortized over an original period of five years from the issuance date of May 15, 2009. On a pro-forma basis, whereby we assume the repurchase and cash dividend transactions had been consummated on March 31, 2012, our and our bank's regulatory capital ratios disclosed in Note 12 would have declined by about 75 to 90 basis points.

We and our bank are subject to regulatory capital requirements administered by state and federal banking agencies. Failure to meet the various capital requirements can initiate regulatory action that could have a direct material effect on the financial statements. Our bank's ability to pay cash and stock dividends is subject to limitations under various laws and regulations, to prudent and sound banking practices, and to contractual provisions relating to our subordinated debentures and participation in the Capital Purchase Program.

Table of Contents

MERCANTILE BANK CORPORATION

Results of Operations

We recorded net income attributable to common shares of \$2.6 million, or \$0.30 per basic share and \$0.28 per diluted share, for the first quarter of 2012, compared to net income attributable to common shares of \$1.1 million, or \$0.13 per basic share and \$0.12 per diluted share, for the first quarter of 2011. The establishment of a valuation allowance against our net deferred tax asset in the fourth quarter of 2009 and the reversal of the valuation allowance in the fourth quarter of 2011 distort 2012 and 2011 after-tax operating result comparisons. On a pre-tax basis, our net income for the first quarter of 2012 was \$4.1 million, compared to net income of \$1.4 million for the prior-year first quarter.

The improved pre-tax earnings performance in the first quarter of 2012 compared to the respective prior-year period primarily resulted from a lower provision to the allowance and decreased overhead costs. The decreased provision expense reflects lower volumes of loan rating downgrades and nonperforming loans and a higher volume of loan rating upgrades, as well as continued progress in the stabilization of economic and real estate market conditions and resulting collateral valuations. In addition, in many instances the reserve allocation factors for non-impaired commercial loans were lowered as higher loan charge-off periods were replaced with lower loan charge-off periods in the quarterly reserve migration calculations. The decline in overhead costs mainly resulted from decreased nonperforming asset costs and lower FDIC insurance premiums. A higher net interest margin, which partially mitigated the negative impact of a lower level of average earning assets, and increased noninterest income also contributed to the improved earnings performance in the first quarter of 2012 compared to prior-year first quarter.

Our earnings performance continues to be hindered by elevated costs associated with the administration and resolution of problem assets; however, these costs trended downward during 2011 and into 2012 as the level of nonperforming assets declined. Although decreasing, the level of nonperforming assets remains elevated when compared to pre-2007 reporting periods as a result of the state, regional and national economic struggles experienced over the past several years and related impact on certain of our borrowers. We expect continued reductions in nonperforming asset administration and resolution costs in future periods as the level of nonperforming assets continues to decline.

Interest income during the first quarter of 2012 was \$15.6 million, a decrease of \$3.6 million, or 18.8%, from the \$19.2 million earned during the first quarter of 2011. The reduction in interest income is primarily attributable to a significant decrease in earning assets and, to a lesser extent, a declining yield on earning assets. During the first quarter of 2012, earning assets averaged \$1.29 billion, a decline of \$224.9 million, or 14.8%, from the \$1.52 billion in average earning assets during the first quarter of 2011. Average loans were down \$167.8 million, average securities decreased \$59.9 million, average federal funds sold increased \$2.4 million, and average interest-bearing deposit balances increased \$0.4 million.

During the first quarter of 2012 and 2011, earning assets had a weighted average yield (tax equivalent-adjusted basis) of 4.87% and 5.16%, respectively. The decline in earning asset yield in the first quarter of 2012 compared to the prior-year first quarter resulted from a decreased yield on average loans, and to a much lesser degree, a change in average earning asset mix, most notably an increase in lower-yielding average federal funds sold as a percentage of average earning assets, and a decreased yield on average securities.

Table of Contents

MERCANTILE BANK CORPORATION

The yield on average loans was 5.20% in the first quarter of 2012 compared to 5.50% in the respective 2011 period. The lower yield on average loans in the first quarter of 2012 compared to the prior-year first quarter mainly resulted from a decreased yield on average commercial loans, which equaled 5.22% in the current-year first quarter compared to 5.53% in the respective prior-year period. The commercial loan yield was negatively impacted by the lowering of rates on certain commercial loans throughout 2011 and into 2012 as a result of borrowers warranting decreased loan rates due to improved financial performance, the renewal of certain maturing term loans at lower rates, and competitive pricing pressures. In addition, the commercial loan yield was negatively impacted by an ongoing interest rate risk management strategy implemented in early 2011 whereby certain commercial loan relationships are being converted from the Mercantile Bank Prime Rate to the Wall Street Journal Prime Rate; this strategy, which is discussed in Item 3 of Part I of this report, has a short-term negative impact on net interest income as the conversions generally involve interest rate reductions. The commercial loan yield in the first quarter of 2012 was also negatively impacted by a \$154,000 net decline in the present values of the purchased and sold interest rate caps; excluding the impact of this net decline, the yield on average commercial loans was 5.28% and the yield on average total loans was 5.26% in the first quarter of 2012. Average loans equaled 82.3% of average earning assets during the first quarter of 2012, while average securities, federal funds sold, and interest-bearing deposit balances equaled 13.0%, 3.9%, and 0.8%, respectively. During the first quarter of 2011, average loans, securities, federal funds sold, and interest-bearing deposit balances represented 81.2%, 15.1%, 3.1%, and 0.6%, respectively, of average earning assets.

The yield on average securities was 4.43% in the first quarter of 2012 compared to 4.49% in the respective 2011 period. The lower yield on average securities in the first quarter of 2012 compared to the prior-year first quarter mainly resulted from a decreased yield on U.S. Government agency bonds, reflecting a decline in market rates. The yield on U.S. Government agency bonds was 4.19% in the first quarter of 2012 compared to 4.30% in the first quarter of 2011. Purchases of U.S. Government agency bonds with lower yields during the fourth quarter of 2011 and the first quarter of 2012 using proceeds received from called bonds of the same type negatively impacted the yield on average securities. The bond purchases were necessary to meet collateral requirements. Unaccreted discount of \$0.1 million related to the called agency bonds was recognized as income during the first quarter of 2012; excluding this discount, the yield on U.S. Government agency bonds would have been 3.62% in the current-year first quarter.

Interest expense during the first quarter of 2012 was \$3.7 million, a decrease of \$2.0 million, or 35.5%, from the \$5.7 million expensed during the first quarter of 2011. The reduction in interest expense in the first quarter of 2012 compared to the respective 2011 period is attributable to a decrease in the volume of average interest-bearing liabilities and a decline in the weighted average cost of interest-bearing liabilities.

During the first quarter of 2012, interest-bearing liabilities averaged \$1.09 billion, or \$252.2 million lower than average interest-bearing liabilities of \$1.35 billion during the prior-year first quarter. Average interest-bearing deposits were down \$186.8 million, while average short-term borrowings decreased \$35.0 million, average FHLB advances decreased \$20.0 million, and average other borrowings decreased \$10.4 million.

Table of Contents

MERCANTILE BANK CORPORATION

During the first quarter of 2012 and 2011, interest-bearing liabilities had a weighted average rate of 1.35% and 1.72%, respectively. The lower weighted average cost of interest-bearing liabilities in the first quarter of 2012 compared to the prior-year first quarter was primarily due to the decline in market interest rates that began late in the third quarter of 2007 and continued through December of 2008 and a change in average interest-bearing liability mix, most notably decreases in higher-costing average certificates of deposit and FHLB advances and increases in certain lower-costing non-certificate of deposit accounts as a percentage of average interest-bearing liabilities. Market interest rates remained low during 2009, 2010, 2011, and the first three months of 2012. The lowering of interest rates on non-certificate of deposit accounts and repurchase agreements during the last six months of 2011 positively impacted the weighted average cost of interest-bearing liabilities in the first quarter of 2012 compared to the respective 2011 period. In addition, maturing fixed-rate certificates of deposit and FHLB advances were renewed at lower rates, replaced by lower-costing funds, or allowed to runoff during 2011 and the first three months of 2012.

Net interest income during the first quarter of 2012 was \$11.9 million, a decrease of \$1.6 million, or 11.7%, from the \$13.5 million earned during the first quarter of 2011. The decrease in net interest income in the first quarter of 2012 compared to the first quarter of 2011 was due to a decrease in earning assets, which more than offset an increase in the net interest margin. Average total loans during the first quarter of 2012 declined \$167.8 million, or 13.6%, compared to the prior-year first quarter, and average securities declined \$59.9 million, or 26.2%, during the comparable time periods.

The net interest margin during the first quarter of 2012 was 3.73%, compared to 3.64% during the first quarter of 2011. Excluding the impact of the net decline in the present values of the purchased and sold interest rate caps, the net interest margin equaled 3.78% in the first quarter of 2012. The improved net interest margin in the first quarter of 2012 compared to the prior-year first quarter reflects a reduction in our cost of funds, which more than offset the decreased yield on earning assets. Although our yield on earning assets declined in the first quarter of 2012 compared to the respective prior-year period, our cost of funds declined at a significantly greater rate, resulting in the improved net interest margin. The lowering of interest rates on certain non-certificate of deposit accounts and repurchase agreements during the latter half of 2011 positively impacted the cost of funds. The cost of funds also decreased as a result of higher-costing matured certificates of deposit and FHLB advances being renewed at lower rates, replaced by lower-costing funds, or allowed to runoff.

The following table sets forth certain information relating to our consolidated average interest-earning assets and interest-bearing liabilities and reflects the average yield on assets and average cost of liabilities for the first quarter of 2012 and 2011. Such yields and costs are derived by dividing income or expense by the average daily balance of assets or liabilities, respectively, for the period presented. Tax-exempt securities interest income and yield have been computed on a tax equivalent basis using a marginal tax rate of 35%. Securities interest income was increased by \$170,000 and \$180,000 in the first quarter of 2012 and 2011, respectively, for this adjustment.

Total liabilities and shareholders' equity	\$ 1,409,953			\$ 1,602,882		
Net interest income		\$ 12,039			\$ 13,629	
Net interest rate spread			3.52%			3.44%
Net interest spread on average assets			3.42%			3.45%
Net interest margin on earning assets			3.73%			3.64%

No provision expense was recorded during the first quarter of 2012, compared to provision expense of \$2.2 million in the first quarter of 2011. The reduced provision expense reflects lower volumes of loan rating downgrades and nonperforming loans and a higher volume of loan rating upgrades, as well as continued progress in the stabilization of economic and real estate market conditions and resulting collateral valuations. In addition, in many instances the reserve allocation factors for non-impaired commercial loans were lowered as higher loan charge-off periods

Edgar Filing: MERCANTILE BANK CORP - Form 10-Q

were replaced with lower loan charge-off periods in the quarterly reserve migration calculations. Net loan charge-offs of \$5.6 million were recorded during the first quarter of 2012, compared to \$5.4 million during the prior-year first quarter.

62.

Table of Contents

MERCANTILE BANK CORPORATION

Of the \$7.6 million in gross loans charged-off during the first three months of 2012, \$3.4 million, or about 46%, represents the elimination of specific reserves that were established through provision expense in earlier periods. The allowance, as a percentage of total loans outstanding, was 2.94% as of March 31, 2012, compared to 3.41% as of December 31, 2011 and 3.49% as of March 31, 2011.

Noninterest income during the first quarter of 2012 was \$1.9 million, an increase of \$0.2 million, or 10.4%, from the \$1.7 million earned during the first quarter of 2011. The increase in noninterest income in the 2012 period compared to the respective 2011 period was mainly due to higher residential mortgage banking fee income, reflecting increased activity due to lower mortgage interest rates.

Noninterest expense during the first quarter of 2012 was \$9.7 million, a decrease of \$1.9 million, or 16.6%, from the \$11.6 million expensed during the first quarter of 2011. Nonperforming asset administration and resolution costs totaled \$1.3 million during the first quarter of 2012, a decrease of \$1.8 million, or 58.8%, from the \$3.1 million in costs incurred during the first quarter of 2011. These costs remain elevated; however, the costs are expected to decrease further in future periods as the level of nonperforming assets continues to decline. FDIC insurance premiums were \$0.3 million during the first quarter of 2012, compared to \$0.9 million during the first quarter of 2011; the lower premiums primarily resulted from a decreased assessment rate, reflecting our improved financial condition and operating performance and the implementation of the FDIC's revised risk-based assessment system on April 1, 2011.

During the first quarter of 2012, we recorded income before federal income tax of \$4.1 million and a federal income tax expense of \$1.3 million. During the first quarter of 2011, we recorded income before federal income tax of \$1.4 million and no federal income tax expense. A federal income tax expense was recorded in the first quarter of 2012 as a result of the valuation allowance against our net deferred tax asset being reversed at year-end 2011.

Item 3. Quantitative and Qualitative Disclosures About Market Risk

Our primary market risk exposure is interest rate risk and, to a lesser extent, liquidity risk. All of our transactions are denominated in U.S. dollars with no specific foreign exchange exposure. We have only limited agricultural-related loan assets and therefore have no significant exposure to changes in commodity prices. Any impact that changes in foreign exchange rates and commodity prices would have on interest rates is assumed to be insignificant. Interest rate risk is the exposure of our financial condition to adverse movements in interest rates. We derive our income primarily from the excess of interest collected on our interest-earning assets over the interest paid on our interest-bearing liabilities. The rates of interest we earn on our assets and owe on our liabilities generally are established contractually for a period of time. Since market interest rates change over time, we are exposed to lower profitability if we cannot adapt to interest rate changes. Accepting interest rate risk can be an important source of profitability and shareholder value; however, excessive levels of interest rate risk could pose a significant threat to our earnings and capital base. Accordingly, effective risk management that maintains interest rate risk at prudent levels is essential to our safety and soundness.

Evaluating the exposure to changes in interest rates includes assessing both the adequacy of the process used to control interest rate risk and the quantitative level of exposure. Our interest rate risk management process seeks to ensure that appropriate policies, procedures, management information systems and internal controls are in place to maintain interest rate risk at prudent levels with consistency and continuity. In evaluating the quantitative level of interest rate risk, we assess the existing and potential future effects of changes in interest rates on our financial condition, including capital adequacy, earnings, liquidity and asset quality.

Table of Contents

MERCANTILE BANK CORPORATION

We use two interest rate risk measurement techniques. The first, which is commonly referred to as GAP analysis, measures the difference between the dollar amounts of interest sensitive assets and liabilities that will be refinanced or repriced during a given time period. A significant repricing gap could result in a negative impact to our net interest margin during periods of changing market interest rates.

The following table depicts our GAP position as of March 31, 2012:

	Within Three Months	Three to Twelve Months	One to Five Years	After Five Years	Total
Assets:					
Commercial loans (1)	\$ 229,936,000	\$ 160,164,000	\$ 542,869,000	\$ 23,105,000	\$ 956,074,000
Residential real estate loans	35,364,000	9,330,000	36,899,000	10,617,000	92,210,000
Consumer loans	1,388,000	553,000	1,339,000	110,000	3,390,000
Securities (2)	28,963,000	22,000	38,587,000	94,370,000	161,942,000
Federal funds sold	61,022,000	0	0	0	61,022,000
Interest-bearing deposits	9,594,000	0	750,000	0	10,344,000
Allowance for loan losses	0	0	0	0	(30,943,000)
Other assets	0	0	0	0	147,557,000
Total assets	366,267,000	170,069,000	620,444,000	128,202,000	\$ 1,401,596,000

Cumulative GAP	\$ (225,036,000)	\$ (260,815,000)	\$ 78,119,000	\$ 206,321,000	
	(16.1%)	(18.6%)	5.6%	14.7%	

Percent of cumulative GAP to total
assets

- (1) Floating rate loans that are currently at interest rate floors are treated as fixed rate loans and are reflected using maturity date and not repricing frequency.
- (2) Mortgage-backed securities are categorized by average life calculations based upon prepayment trends as of March 31, 2012.

64.

MERCANTILE BANK CORPORATION

The second interest rate risk measurement we use is commonly referred to as net interest income simulation analysis. We believe that this methodology provides a more accurate measurement of interest rate risk than the GAP analysis, and therefore, it serves as our primary interest rate risk measurement technique. The simulation model assesses the direction and magnitude of variations in net interest income resulting from potential changes in market interest rates. Key assumptions in the model include prepayment speeds on various loan and investment assets; cash flows and maturities of interest sensitive assets and liabilities; and changes in market conditions impacting loan and deposit volume and pricing. These assumptions are inherently uncertain, subject to fluctuation and revision in a dynamic environment; therefore, the model cannot precisely estimate net interest income or exactly predict the impact of higher or lower interest rates on net interest income. Actual results will differ from simulated results due to timing, magnitude, and frequency of interest rate changes and changes in market conditions and our strategies, among other factors.

We conducted multiple simulations as of March 31, 2012, in which it was assumed that changes in market interest rates occurred ranging from up 400 basis points to down 400 basis points in equal quarterly instalments over the next twelve months. The following table reflects the suggested impact on net interest income over the next twelve months in comparison to estimated net interest income based on our balance sheet structure, including the balances and interest rates associated with our specific loans, securities, deposits and borrowed funds, as of March 31, 2012. The resulting estimates are well within our policy parameters established to manage and monitor interest rate risk.

Interest Rate Scenario	Dollar Change In Net Interest Income	Percent Change In Net Interest Income
Interest rates down 400 basis points	\$ (2,830,000)	(6.1%)
Interest rates down 300 basis points	(2,490,000)	(5.4)
Interest rates down 200 basis points	(2,100,000)	(4.5)
Interest rates down 100 basis points	(1,540,000)	(3.3)
No change in interest rates	(300,000)	(0.7)
Interest rates up 100 basis points	1,160,000	2.5
Interest rates up 200 basis points	1,550,000	3.4
Interest rates up 300 basis points	2,030,000	4.4
Interest rates up 400 basis points	1,760,000	3.8

Table of Contents

MERCANTILE BANK CORPORATION

The resulting estimates have been significantly impacted by the current interest rate and economic environments, as adjustments have been made to critical model inputs with regards to traditional interest rate relationships. This is especially important as it relates to floating rate commercial loans and brokered certificates of deposit, which comprise a substantial portion of our balance sheet.

As of March 31, 2012, the Mercantile Bank Prime Rate was 4.50% as compared to the Wall Street Journal Prime Rate of 3.25%. Historically, the two indices have been equal; however, we elected not to reduce the Mercantile Bank Prime Rate in late October and mid-December of 2008 when the Wall Street Journal Prime Rate declined by 50 and 75 basis points, respectively. In conducting our simulations since year-end 2008, we have made the assumption that the Mercantile Bank Prime Rate will remain unchanged until the Wall Street Journal Prime Rate equals the Mercantile Bank Prime Rate, at which time the two indices will remain equal in the increasing interest rate scenarios. One of our primary interest rate goals has been to reduce the negative impact this repricing gap will likely have on our net interest income in an increasing interest rate environment, for which we have devised two primary strategies. First, starting in early 2011, we started a program to convert certain commercial loan relationships from the Mercantile Bank Prime Rate to the Wall Street Journal Prime Rate. As of March 31, 2012, approximately 39% of our floating rate commercial loans were tied to the Wall Street Journal Prime Rate, compared to less than 5% at year-end 2010. Although this program has a short-term negative impact on net interest income as the conversion generally involves an interest rate reduction, it will have a positive impact on net interest income in a rising interest rate environment as the affected commercial loans will be subject to increased repricing sooner than otherwise. Second, in June of 2011, we entered into a two-year cap corridor that is addressed in Note 9, which as of March 31, 2012 would provide for a net increase in net interest income of \$0.6 million, \$1.0 million, \$1.1 million and \$1.2 million in the increasing interest rate environments of 100 basis points, 200 basis points, 300 basis points and 400 basis points, respectively. This financial impact is included in the table above.

Brokered certificate of deposit rates have substantially decreased since December of 2008, with part of the decline attributable to a significant imbalance whereby the supply of available funds far outweighs the demand from banks looking to raise funds. As a result, we have substantially limited further reductions in brokered certificate of deposit rates in the declining interest rate scenarios.

In addition to changes in interest rates, the level of future net interest income is also dependent on a number of other variables, including: the growth, composition and absolute levels of loans, deposits, and other earning assets and interest-bearing liabilities; level of nonperforming assets; economic and competitive conditions; potential changes in lending, investing, and deposit gathering strategies; client preferences; and other factors.

Item 4. Controls and Procedures

As of March 31, 2012, an evaluation was performed under the supervision of and with the participation of our management, including our Chief Executive Officer and Chief Financial Officer, of the effectiveness of the design and operation of our disclosure controls and procedures. Based on that evaluation, our management, including our Chief Executive Officer and Chief Financial Officer, concluded that our disclosure controls and procedures were effective as of March 31, 2012. There have been no significant changes in our controls over financial reporting during the quarter ended March 31, 2012 that have materially affected, or are reasonably likely to materially affect, our internal controls over financial reporting.

PART II OTHER INFORMATION

Item 1. Legal Proceedings.

From time to time, we may be involved in various legal proceedings that are incidental to our business. In our opinion, we are not a party to any current legal proceedings that are material to our financial condition, either individually or in the aggregate.

Item 1A. Risk Factors.

There have been no material changes in our risk factors from those previously disclosed in our annual report on Form 10-K for the year ended December 31, 2011.

Item 2. Unregistered Sales of Equity Securities and Use of Proceeds.

We made no unregistered sale of equity securities, nor did we purchase our equity securities, during the quarter ended March 31, 2012.

In April 2010, our Board of Directors suspended payments of cash dividends on our common stock. Holders of our common stock are entitled to receive cash dividends to the extent that they are declared from time to time by our Board of Directors. Holders of our preferred stock are entitled to receive cash dividends in the amount provided for in our Articles of Incorporation, to the extent that they are declared by our Board of Directors. We may only pay cash dividends out of funds that are legally available for that purpose. We are a holding company and substantially all of our assets are held by our subsidiaries. Our ability to pay cash dividends to our shareholders depends primarily on our bank's ability to pay cash dividends to us. Cash dividend payments and extensions of credit to us from our bank are subject to legal and regulatory limitations, generally based on capital levels and current and retained earnings, imposed by law and regulatory agencies with authority over our bank. The ability of our bank to pay cash dividends is also subject to its profitability, financial condition, capital expenditures and other cash flow requirements.

Also, in connection with our participation in the United States Treasury Department's Capital Purchase Program, we agreed that we would not, without the Treasury Department's consent, pay a cash dividend on our common stock, other than a regular quarterly dividend of not more than \$0.04 per share. This limit on paying dividends without the Treasury Department's consent remains in effect until the earlier of (i) May 15, 2012, or (ii) when all of the preferred stock that we sold to the Treasury Department has been redeemed by us or transferred by the Treasury Department to third parties. Our outstanding preferred stock was issued on May 15, 2009 pursuant to the Capital Purchase Program. The provisions of our Articles of Incorporation relating to our preferred stock preclude us from paying any cash dividends on our common stock if any dividends accrued on our preferred stock have not been declared and paid through the most recent dividend payment date. We are current in the payment of dividends on our preferred stock.

Item 3. Defaults Upon Senior Securities.

Not applicable.

Item 4. Mine Safety Disclosures.

Not applicable.

Item 5. Other Information.

Not applicable.
